

## Clinical trial results:

### Effects of ultra-long acting bronchodilator therapy assessed by impulse oscillometry in smoking asthmatics taking inhaled corticosteroids

#### Summary

EudraCT number	2014-005317-23
Trial protocol	GB
Global end of trial date	22 May 2019

#### Results information

Result version number	v1 (current)
This version publication date	25 November 2020
First version publication date	25 November 2020

#### Trial information

##### Trial identification

Sponsor protocol code	2013RC06
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02682862
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	University of Dundee - NHS Tayside
Sponsor organisation address	Residency Block, Level 3, Ninewells Hospital, George Pirie Way, Dundee, United Kingdom, DD1 9SY
Public contact	General Enquiries, Scottish Centre for Respiratory Research, 44 (0)1382 383902, <a href="mailto:scrr@dundee.ac.uk">scrr@dundee.ac.uk</a>
Scientific contact	General Enquiries, Scottish Centre for Respiratory Research, 44 (0)1382 383902, <a href="mailto:scrr@dundee.ac.uk">scrr@dundee.ac.uk</a>

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 May 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 May 2019
Global end of trial reached?	Yes
Global end of trial date	22 May 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the effects of olodaterol alone versus olodaterol plus tiotropium given once daily as add-on therapy to pre-existing inhaled corticosteroids using impulse oscillometry in smoking asthmatics

Protection of trial subjects:

The study Sponsor carried out a study risk assessment before issuing approval. The study was approved by the East of Scotland Research Ethics Service (Ref: 15/ES/0032). Informed consent was obtained from all participants. Participants were checked against all inclusion and exclusion criteria and only participants deemed clinically stable were recruited into the study. A medically-qualified person confirmed that it was safe for the participant to receive the IMP. Participants were issued a peak flow and symptom diary to assess clinical stability throughout the study. Participants were also issued an out-of-hours contact card with the mobile number carried by medical staff for advice if they encountered any adverse effects. One week after the end of each treatment period, patients were contacted by phone as a safety follow-up.

Background therapy:

After the screening visit, participants entered a 2-4 week run-in period when LABA or LAMA were stopped and participants' ICS dose was rounded to equivalent reference ICS as HFA-BDP (Clenil Modulite pMDI). This dose of Clenil was then continued unchanged throughout the study.

Evidence for comparator:

We used the LABA olodaterol (OLO), and the combination of olodaterol with the LAMA tiotropium (OLO/TIO) both delivered via the soft mist Respimat inhaler. The rationale for choosing the Respimat device was that it was possible to deliver the OLO and OLO/TIO via the same device.

Actual start date of recruitment	11 July 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 29
Worldwide total number of subjects	29
EEA total number of subjects	29

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	29
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subject recruitment began 11 July 2016 and the study completed on 22 May 2019. Of the 29 patients screened, 17 were randomised and 16 completed per protocol and were included in the final analysis.

### Pre-assignment

Screening details:

Diagnosis of persistent asthma, current smokers, age 18-65 years, taking at least 400µg per day of ICS (as HFA-BDP Clenil equivalent dose). Patients with COPD or ACO were excluded. Patients who had an asthma exacerbation requiring systemic corticosteroids within 1 month of screening or requiring hospital admission within 3 months were excluded.

### Pre-assignment period milestones

Number of subjects started	29
Number of subjects completed	17

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Did Not Meet Inclusion Criteria: 9
Reason: Number of subjects	Worsening Asthma Symptoms During Run-In: 3

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable as this was an open-label study.

### Arms

Are arms mutually exclusive?	No
------------------------------	----

<b>Arm title</b>	Olodaterol
------------------	------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Olodaterol
Investigational medicinal product code	
Other name	Striverdi Respimat
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Participants inhaled 2 puffs (2.5 micrograms/puff) of olodaterol once daily in the morning for 2 - 4 weeks.

<b>Arm title</b>	Olodaterol-Tiotropium
------------------	-----------------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Olodaterol-Tiotropium
Investigational medicinal product code	
Other name	Spiolto Respimat
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

---

**Dosage and administration details:**

Participants inhaled 2 puffs (2.5 micrograms/2.5micrograms per puff) of olodaterol-tiotropium once daily in the morning for 2 - 4 weeks.

<b>Number of subjects in period 1</b>	Olodaterol	Olodaterol- Tiotropium
Started	16	17
Completed	16	16
Not completed	0	1
Unable to comply with procedures of the protocol	-	1

## Baseline characteristics

### Reporting groups<sup>[1]</sup>

Reporting group title	Overall Trial
-----------------------	---------------

Reporting group description: -

Notes:

[1] - The number of subjects reported to be in the baseline period is not equal to the worldwide number of subjects enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number enrolled is the number of subjects screened into the study (29).

The number of subjects in the baseline period is the number who were randomised into the study (17).

Of these 17 subjects, 16 completed the study per protocol and were able to be analysed.

Reporting group values	Overall Trial	Total	
Number of subjects	17	17	
Age categorical			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	17	17	
From 65-84 years	0	0	
85 years and over	0	0	
Age continuous			
Units: years			
arithmetic mean	42.41		
standard deviation	± 11.72	-	
Gender categorical			
Units: Subjects			
Female	10	10	
Male	7	7

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events were recorded from the time a participant consented to join the study until the last study visit.

Adverse event reporting additional description:

Participants received training on how to record adverse events on trial-specific diary cards. At each study visit, participants were asked about the occurrence of any adverse events.
