EU Clinical Trials Register

Clinical trial results:
Long term clear skin maintenance treatment optimization in patients with moderate to severe chronic plaque psoriasis: A randomized, multicenter, open-label with blinded-assessment, comparative, 52 week study to evaluate the efficacy, safety and tolerability of secukinumab 300 mg s.c.

Global end of trial reached?	Yes
Global end of trial date	08 May 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial was to demonstrate in the patient pool of PASI 90 responders at Week 24 that secukinumab 300 mg subcutaneous (s.c.) every 6 weeks treatment is non-inferior to secukinumab 300 mg s.c. every 4 weeks treatment with respect to maintaining a PASI 90 response rate at Week 52.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1553
From 65 to 84 years	91
85 years and over	3

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The screening period was up to 4 weeks and rescreening was allowed for an unlimited number of times. At the Screening Visit, every patient was registered in an Interactive Response Technology and the Investigator ensured that the patient fulfilled all the inclusion/exclusion criteria.

Period 1

Period 1 title	Treatment Period 1 ->Treatment Period 2 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	No
Arm title	Treatment Period 1: All participants

Arm description:

Participants received secukinumab 300 mg subcutaneous (s.c.) every 4 weeks for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Secukinumab 300 mg subcutaneous (s.c.) every 4 weeks for 24 weeks.

Arm title	Treatment Period 2: Group 1

Arm description:

Participants with moderate to severe plaque psoriasis who had reached PASI 90 response after 24 weeks of treatment with secukinumab 300 mg s.c. every 4 weeks were treated with Secukinumab 300 mg s.c. from week 24 until Week 52 every 4 weeks.

Arm type	Experimental
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Secukinumab 300 mg subcutanous (s.c.) from week 24 until Week 52 every 4 weeks

Arm title	Treatment Period 2: Group 2

Arm description:

Participants with moderate to severe plaque psoriasis who had reached PASI 90 response after 24 weeks of treatment with secukinumab 300 mg s.c. every 4 weeks were treated with Secukinumab 300 mg s.c. from week 24 until Week 52 every 6 weeks.

Arm type	Experimental

Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Secukinumab 300 mg subcutanous (s.c.) from week 24 until Week 52 every 6 weeks

Arm title	Treatment period 2: Group 3

Arm description:

Participants with moderate to severe plaque psoriasis who had reached PASI 75 to <90 response after 24 weeks of treatment with secukinumab 300 mg s.c. every 4 weeks will be treated with Secukinumab 300 mg s.c. from week 24 until Week 52 every 4 weeks.

Arm type	Experimental
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Secukinumab 300 mg subcutanous (s.c.) from week 24 until Week 52 every 4 weeks.

Arm title	Treatment period 2: Group 4

Arm description:

Participants with moderate to severe plaque psoriasis, who had reached PASI 75 to <90 response after 24 weeks of treatment with secukinumab 300 mg s.c. every 4 weeks, were treated with Secukinumab 300 mg s.c. from week 24 until Week 52 every 2 weeks.

Arm type	Experimental
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Secukinumab 300 mg subcutanous (s.c.) from week 24 until Week 52 every 2 weeks

Primary: Maintenance of PASI 90 response at Week 52 in participants with a PASI 90 response at Week 24

End point title	Maintenance of PASI 90 response at Week 52 in participants with a PASI 90 response at Week 24[1]
End point description:	
PASI is a combined assessment of lesion severity and affected area into a single score: 0 (no disease) to 72(maximal disease). Body is divided into 4 areas for scoring (head, arms, trunk, legs; each area is scored by itself and scores are combined for final PASI. For each area, percent of skin involved is estimated: 0 (0%) to 6 (90-100%), and severity is estimated by clinical signs, erythema, induration and desquamation; scale 0 (none) to 4 (maximum). Final PASI = sum of severity parameters for each area* area score weight of section (head: 0.1, arms: 0.2 body: 0.3 legs: 0.4).	
End point type	Primary
End point timeframe:	
Week 52	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint applies to Group 1 and Group 2 at the time of observation.

Secondary: Change from baseline in DLQI in participants with a PASI 90 response at Week 24

End point title	Change from baseline in DLQI in participants with a PASI 90 response at Week 24[7]

End point description:

The DLQI is a ten item general dermatology disability index designed to assess health-related quality of life in adult participants with skin diseases such as eczema, psoriasis, acne and viral worts. It is a self-administered questionnaire which includes domains of daily activity, leisure, personal relationships, symptoms and feelings, treatment and school/work activities. Each domain has 4 response categories ranging from 0 (not at all) to 3 (very much). "Not relevant" is a valid score also and is scored as 0. The DLQI total score is a sum of all 10 responses. Scores range from 0 to 30 with higher scores indicating greater health-related quality of life impairment. A negative mean percentage change from baseline indicates improvement.

End point type	Secondary

End point timeframe:

Week 52

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint applies to Group 1 and Group 2 at the time of observation.

Secondary: Change from baseline in Work Productivity and Activity Impairment Questionnaire - Psoriasis (WPAI-PSO) score in participants with a PASI 90 response at Week 24

End point title	Change from baseline in Work Productivity and Activity Impairment Questionnaire - Psoriasis (WPAI-PSO) score in participants with a PASI 90 response at Week 24[9]

End point description:

The WPAI-PSO is a self-administered questionnaire comprised of 6 questions about effects of psoriasis on the patient's ability to work and perform regular activities based on the previous 7 days. The questionnaire quantifies the number of hours the respondent was unable to work and evaluates how much the respondent's psoriasis affected productivity while working. For respondents who were not in paid employment, the questionnaire evaluated how much the respondent's psoriasis affects their ability

to perform regular daily activities. Four outcomes were generated from the WPAI-PSO: % Absenteeism: percent work time missed due to health; % Presenteeism: percent impairment while working due to health; % Total work productivity impairment: percent overall work impairment due to health; % Total activity impairment: percent activity impairment due to health for all respondents. First 3 outcomes applied to employed participants only. A negative change from baseline indicates improvement.

End point type	Secondary

End point timeframe:

Secondary: Change from baseline in pain, itching and scaling score in participants with a PASI 90 response at Week 24

End point title	Change from baseline in pain, itching and scaling score in participants with a PASI 90 response at Week 24[11]

End point description:

Self-administered, 11-point numeric rating scales (NRS, 0-10) were used to evaluate the patients' assessment of their current pain, itching and scaling. Respondents answered the following questions for the assessment: Pain: Overall, how severe was your psoriasis-related pain over the past 24 hours?; Itching: Overall, how severe was your psoriasis-related itch over the past 24 hours?; and Scaling: Overall, how severe was your psoriasis-related scaling over the past 24 hours? Patients had to rate their pain, itching, and scaling from 0 to 10 (11-point scale), with the understanding that the 0 represents the absence or null end of the pain, itching, or scale intensity (i.e. no pain, itching or scaling) and the 10 represents the other extreme of pain, itching, or scaling intensity (i.e. pain, itching or scaling as bad as it could be). The number that the patient selected represents his or her intensity score in the respective category. A negative change from baseline indicates improvement

Secondary: Change from baseline in the EQ-5D utility index (Germany, United Kingdom (UK)) in participants with a PASI 90 response at Week 24

End point title	Change from baseline in the EQ-5D utility index (Germany, United Kingdom (UK)) in participants with a PASI 90 response at Week 24[15]

End point description:

The EQ-5D quantifies the health state of a patient for the following five dimensions: mobility, self-care, usual activities, pain/discomfort and anxiety/depression. In the current study the EQ-5D-5L version has been used which evaluates each of these dimensions using the following five labels: "no problems", "slight problems", "moderate problems", "severe problems" and "unable to/extreme problems". Based on the five dimensions, a summary score (utility index) was derived using country specific value sets evaluating the patient condition described by the outcome in the single dimensions. For this trial, the EQ-5D-5L utility index based on the crosswalk value sets available from the EuroQol for Germany and for UK (https://euroqol.org/eq-5d-instruments/eq-5d-5l-about/) was calculated. A positive change from baseline indicates improvement.

End point type	Secondary

End point timeframe:

Week 52

Notes:

[15] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint applies to Group 1 and Group 2 at the time of observation.

End point values	Treatment Period 2: Group 1	Treatment Period 2: Group 2		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	605	623		
Units: score on a scale				
arithmetic mean (standard deviation)				
Germany|	0.17 (± 0.200)	0.13 (± 0.182)		
UK|	0.28 (± 0.250)	0.22 (± 0.230)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious Adverse Events are monitored from date of First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All other adverse events are monitored from First Patient First Treatment until Last Patient Last Visit.

Adverse event reporting additional description:

The Adverse Events (AE) dataset has MedDRA version 19.1 (5345 records) and 20.0 (1272 records). Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally relat

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 June 2015	Amendment 1 was issued to align the requirements for the duration of contraception to be used by patients during the study with the approved European Summary of Product Characteristics. According to the Exclusion criteria of the study protocol, women of childbearing potential had to use effective methods of contraception during dosing of study treatment and for 16 weeks after stopping treatment, in line with phase III AIN457A program study protocols. Therefore, the advice to female patients to prevent pregnancy was amended to cover also the contraception length post treatment requirements of the European Summary of Product Characteristics (20 weeks). In addition, the approved European Summary of Product Characteristics specifies for the pre-filled secukinumab syringe a warning and precaution for use in case a latex sensitivity would be pertinent for a patient. The removable needle cap of the pre-filled syringe contains a derivative of natural rubber latex; at time of the amendment, no natural rubber latex had been detected in the removable needle cap. Nevertheless, the use of pre-filled syringes in latex sensitive individuals had not been studied and therefore a potential risk of hypersensitivity reactions was seen which could not be completely ruled out. The Exclusion criteria of the study protocol had been updated accordingly, as well as the risks and benefits.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

 None reported
