Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000115-PIP02-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 July 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	02 June 2017
Global end of trial reached?	Yes
Global end of trial date	02 June 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this Phase 3 extension study was to obtain long-term safety data to augment the overall safety database. The secondary objectives was to augment the efficacy data collected in the double-blind study (PTC124-GD-021-CF; NCT02139306).

Protection of trial subjects:

The study was conducted in accordance with the ethical principles that have their origins in the Declaration of Helsinki (revised version of Edinburgh, Scotland, 2000) and in conformance with the International Council for Harmonisation (ICH) Good Clinical Practice (GCP) guidance documents.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 6
Country: Number of subjects enrolled	Australia: 14
Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Brazil: 1
Country: Number of subjects enrolled	Bulgaria: 6
Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	France: 19
Country: Number of subjects enrolled	Germany: 19
Country: Number of subjects enrolled	Greece: 5
Country: Number of subjects enrolled	Israel: 16
Country: Number of subjects enrolled	Italy: 33
Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	Poland: 14
Country: Number of subjects enrolled	Spain: 23
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	United States: 73
Worldwide total number of subjects	246
EEA total number of subjects	130

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	28
Adolescents (12-17 years)	68
Adults (18-64 years)	150
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All eligible participants, including those who received placebo in the double-blind study (PTC124-GD-021-CF; NCT02139306), were enrolled to this open-label extension study. To avoid interruption in treatment, when possible, Screening/Baseline for this extension study was to occur on the same day as the End-of-Study visit for the double-blind study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ataluren
-----------	----------

Arm description:

Participants were administered ataluren orally at a dose of 10 milligrams/grams (mg/kg) in the morning, 10 mg/kg at midday, and 20 mg/kg in the evening for up to 96 weeks.

Arm type	Experimental
Investigational medicinal product name	Ataluren
Investigational medicinal product code	PTC124
Other name	Translarna
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Ataluren will be provided as a vanilla-flavored powder to be mixed with water or milk.

Number of subjects in period 1	Ataluren
Started	246
As-Treated Population	245
Intent-to-treat (ITT) Population	244
Completed	0
Not completed	246
Adverse event, serious fatal	1
Physician decision	1
Consent withdrawn by subject	24
Study Closure	207
Adverse event, non-fatal	4
Abnormal Laboratory Value	2
Required prohibited medications	5
Lost to follow-up	1

Protocol deviation	1

End points

End points reporting groups

Reporting group title	Ataluren
Reporting group description: Participants were administered ataluren orally at a dose of 10 milligrams/grams (mg/kg) in the morning, 10 mg/kg at midday, and 20 mg/kg in the evening for up to 96 weeks.	
Subject analysis set title	Ataluren (As-Treated Population)
Subject analysis set type	Safety analysis
Subject analysis set description: Participants who received at least 1 dose of ataluren.	
Subject analysis set title	Ataluren (ITT Population)
Subject analysis set type	Intention-to-treat
Subject analysis set description: Participants who received at least 1 dose of ataluren and have at least 1 postbaseline efficacy assessment.	

Primary: Number of Participants With Treatment Emergent Adverse Events (TEAEs)

End point title	Number of Participants With Treatment Emergent Adverse Events (TEAEs) ^[1]
End point description: TEAE: any untoward medical occurrence or undesirable event that begins or worsens following administration of study drug, whether or not considered related to study drug by Investigator. Serious adverse event (SAE): an adverse event (AE) resulting in any of following outcomes or deemed significant for any other reason: death, initial or prolonged inpatient hospitalization, life-threatening experience (immediate risk of dying) or persistent or significant disability/incapacity. Except for cystic fibrosis (CF) pulmonary exacerbations, an event wasn't reported as an SAE, if event was exclusively a relapse or an expected change or progression of baseline CF. AEs included both SAEs and nonserious AEs. AEs classified according to NCI CTCAE v3.0 and coded using MedDRA. Population included participants who received at least 1 dose of ataluren (As-Treated Population). A summary of SAEs and all nonserious AEs, regardless of causality, is located in the Reported Adverse Events section.	
End point type	Primary
End point timeframe: Baseline up to Week 100	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analyses not applicable for this endpoint.

Primary: Number of Participants With a Clinically Meaningful Abnormal Clinical Laboratory (Serum Biochemistry, Hematology, and Urinalysis) Parameter

End point title	Number of Participants With a Clinically Meaningful Abnormal Clinical Laboratory (Serum Biochemistry, Hematology, and Urinalysis) Parameter ^[2]
-----------------	--

End point description:

Clinical laboratory results considered clinically meaningful were determined by Investigator. Serum biochemistry parameters: sodium, potassium, chloride, bicarbonate, blood urea nitrogen, creatinine, magnesium, calcium, phosphorus, uric acid, glucose, total protein, albumin, globulin, bilirubin, creatine kinase, lactate dehydrogenase, ALT, AST, gamma glutamyl transferase, ALP, total cholesterol, high-density lipoprotein, low-density lipoprotein, triglycerides, cystatin C. Hematology parameters: WBC count, hemoglobin, hematocrit, mean corpuscular volume, mean corpuscular hemoglobin, red cell count with morphology, platelet count. Urinalysis parameters: pH, specific gravity, glucose, ketones, blood, protein, creatinine, urobilinogen, bilirubin, nitrite, leukocyte esterase. Population included participants who received at least 1 dose of ataluren (As-Treated Population). A summary of all SAEs/nonserious AEs, regardless of causality, is located in the Reported Adverse Events section.

End point type	Primary

Secondary: Change From Baseline in Percent-Predicted Forced Expiratory Volume in 1 Second (FEV1) as Measured by Spirometry at Week 24

End point title	Change From Baseline in Percent-Predicted Forced Expiratory Volume in 1 Second (FEV1) as Measured by Spirometry at Week 24
-----------------	--

End point description:

Pulmonary function of percent-predicted FEV1 was measured using a spirometer. FEV1 is the volume of air that can forcibly be blown out in 1 second. Each percent-predicted FEV1 was based gender, age, and the height value obtained at the same study visit. The percentage of change in percent-predicted of

FEV1 was calculated as follows: (percent-predicted FEV1 - Baseline percent-predicted FEV1/Baseline percent-predicted FEV1)*100. Population included participants who received at least 1 dose of ataluren and have at least 1 postbaseline efficacy assessment (ITT Population) and had evaluable FEV1 data.

End point type	Secondary
End point timeframe:	
Baseline, Week 24

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study was terminated early because the CF data from the double-blind CF Study PTC124-GD-021-CF (NCT02139306) did not meet endpoints.

Notes:
