

Clinical trial results:

Efficacy and Safety of Fixed-Dose Combination

atorvastatin/amlodipine/perindopril versus Fixed-Dose Combination of atorvastatin/ amlodipine in Patients with Hypertension and Dyslipidemia.

Summary

EudraCT number	2014-005378-12
Trial protocol	BG IT
Global end of trial date	08 September 2016

Results information

Result version number	v1 (current)
This version publication date	24 September 2017
First version publication date	24 September 2017

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No
--	----

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 September 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 September 2016
Global end of trial reached?	Yes
Global end of trial date	08 September 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the superiority of oral fixed-dose combination atorvastatin/amlodipine/perindopril versus the reference drug atorvastatin/amlodipine in lowering office sitting systolic blood pressure (SBP) after 12 weeks of treatment versus baseline (W012-W000).

Protection of trial subjects:

This study was conducted in accordance with Good Clinical Practice standards, ethical principles stated in the Declaration of Helsinki and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 91
Country: Number of subjects enrolled	Brazil: 21
Country: Number of subjects enrolled	Bulgaria: 41
Country: Number of subjects enrolled	Italy: 17
Country: Number of subjects enrolled	Mexico: 27
Country: Number of subjects enrolled	Poland: 148
Country: Number of subjects enrolled	Russian Federation: 371
Country: Number of subjects enrolled	Ukraine: 138
Worldwide total number of subjects	854
EEA total number of subjects	206

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	633
From 65 to 84 years	221
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Five patients (1 in Argentina; 1 in Mexico, 2 in Poland and 1 in Russian Federation) who were randomised were not subsequently included.

Pre-assignment

Screening details:

M/F, hypertensive and dyslipidaemic patients, aged 40 to 79 years, naive of treatment, or uncontrolled with antihypertensive monotherapy and/or statin, with inclusion criteria $150 \leq \text{SBP} < 180$ mmHg and $95 \leq \text{DBP} < 110$ mmHg or isolated systolic hypertension and with $130 \leq \text{LDL-c} < 190$ mg/dL with risk of 10-year Atherosclerotic CV Disease $\geq 5\%$.

Period 1

Period 1 title	W000-W012 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Treatment allocated by a centralized (Interactive System Response) balanced non-adaptive randomisation process, with stratification on country .

S 5153 was supplied as tablets as its matching placebo. Atorvastatin/amlodipine was supplied as capsules as its matching placebo.

Arms

Are arms mutually exclusive?	Yes
Arm title	S 5153

Arm description:

Tablets of S 5153 (atorvastatin/amlodipine/perindopril) with doses of 10/5/5 mg, 20/5/5 mg and 20/10/10 mg.

Arm type	Experimental
Investigational medicinal product name	S 5153
Investigational medicinal product code	S 5153
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

-Wash-out period: 2 weeks (3 weeks maximum) without antihypertensive or lipid lowering drugs and without any IMP intake.

At inclusion, the patients randomised to the S 5153 group were allocated a kit comprising tablets of S 5153 10/5/5 mg and capsules of placebo.

At W4, the dose of statin was titrated to 20 mg, as allowed by the level of 10-year ASCVD risk of the patients. Dose of antihypertensive drugs was titrated according to their BP and maintained for 8 weeks until W12 visit (as specified in Amendment No. 2, the up-titrated drug was to be taken from the day of W4 visit, after BP measurement):

-- If BP was not controlled ($\text{SBP} \geq 140$ mmHg or $\text{DBP} \geq 90$ mmHg), patients were dispensed with a kit of S 5153 20/10/10 mg.

-- If BP was controlled ($\text{SBP} < 140$ mmHg and $\text{DBP} < 90$ mmHg), patients were dispensed with a kit of S 5153 20/5/5 mg.

Arm title	Atorvastatin/amlodipine
------------------	-------------------------

Arm description:

Capsules of atorvastatin/amlodipine with doses of 10/5 mg, 20/5 mg and 20/10 mg.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Atorvastatin/amlodipine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Wash-out period: 2 weeks (3 weeks maximum) without antihypertensive or lipid lowering drugs and without any IMP intake.

-At inclusion, the patients randomised to the atorvastatin/amlodipine group were allocated a kit comprising capsules of atorvastatin/amlodipine 10/5 mg and tablets of placebo.

At W4, the dose of statin was titrated to 20 mg, as allowed by the level of 10-year ASCVD risk of the patients. Dose of antihypertensive drug was titrated according to their BP and maintained for 8 weeks until W12 visit (as specified in Amendment No. 2, the up-titrated drug was to be taken from the day of W4 visit, after BP measurement):

-- If BP was not controlled (SBP \geq 140 mmHg or DBP \geq 90 mmHg), patients were dispensed with a kit of atorvastatin/amlodipine 20/10 mg.

-- If BP was controlled (SBP< 140 mmHg and DBP < 90 mmHg), patients were dispensed with a kit of atorvastatin/amlodipine 20/5 mg.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 September 2015	-Amendment No. 1 was applicable in all countries. It mainly concerned: <ul style="list-style-type: none">- Precisions on the upper limits of biological parameters of triglycerides and kaliumaemia, above which the patient was not to be selected or included.- Precisions on the measurements of the blood pressure- Notification of approval of Triveram® (S 5153) in Europe.- Precisions on ERIN notifications.- Precisions on e-CRF completion.
10 February 2016	Amendment No. 2 was applicable in all countries. It mainly concerned: <ul style="list-style-type: none">- Precisions on the limits of blood pressure values for selection.- Notification of approved SmPC of Triveram.- Precision that the first study drug intake should be the day after randomisation, at home, before breakfast.- Blood pressure measurement: if the difference between 2 consecutive SBP measurements was larger than or equal to 15 mmHg, then the set of 3 measurements should not be considered as valid and all 3 measurements were to be repeated after an additional 5 minutes of rest.
15 April 2016	Amendment No. 3 was applicable in all countries. It modified the estimated standard deviation (from 11.9 mmHg to 13.0 mmHg) and consequently re-evaluated the number of patients to be included in the study (from 700 to 830).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
