Clinical trial results:
A Phase 1b/2, Multicenter, Open-label, Basket Trial to Evaluate the Safety of Talimogene Laherparepvec Injected into Liver Tumors Alone and in Combination with Systemic Pembrolizumab in Phase 1b and to Evaluate the Efficacy and Safety of Intratumoral Talimogene Laherparepvec in Combination with Systemic Pembrolizumab to Treat Subjects with Advanced Solid Tumors in Phase 2 (MASTERKEY 318)

Summary

EudraCT number	2014-005386-67
Trial protocol	BE DE AT PL
Global end of trial date	11 July 2023

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 July 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 July 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

In Part 1, the main objective was to evaluate, as assessed by the incidence of dose-limiting toxicities (DLTs) in participants with liver metastases (non- hepatocellular carcinoma [HCC]) & participants with primary HCC in the maximum tolerated volume (monotherapy cohorts) and maximum tolerated concentration (MTC) of intrahepatic injection of talimogene laherparepvec into liver tumors (monotherapy and combination cohorts) in combination with systemic intravenous (IV) administration of pembrolizumab (combination cohorts).

In Part 2, the main objectives were to evaluate the efficacy, as assessed by objective response rate (ORR) of intratumoral injection of talimogene laherparepvec in combination with systemic IV administration of pembrolizumab, separately, for each non-HCC tumor type and primary HCC with and without viral hepatitis and to evaluate safety separately for each tumor type as assessed by incidence of treatment-emergent and treatment-related adverse events, including DLTs.

Protection of trial subjects:

This study was conducted in accordance with International Council for Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 February 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Korea, Republic of: 15
Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	Spain: 58
Country: Number of subjects enrolled	Switzerland: 18
Country: Number of subjects enrolled	United States: 21
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Australia: 3
Worldwide total number of subjects	127
EEA total number of subjects	70

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	84
From 65 to 84 years	43
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

127 participants were enrolled at 22 centers in Australia, Europe, South Korea and the United States from February 2016 to July 2023. As of protocol amendment 6 (dated 26 October 2021), intrahepatic injections of talimogene laherparepvec were no longer performed.

Pre-assignment

Screening details:

Of the 190 participants screened, 127 participants were enrolled and received study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1: Monotherapy Group A

Arm description:

Participants with non-hepatocellular carcinoma (non-HCC) were administered talimogene laherparepvec.

Arm type	Experimental
Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use

Dosage and administration details:

Initial concentration of 10^6 plaque forming unit (PFU)/mL in a volume of up to 4mL in Cohorts 1 & 2 and up to a volume of 8 mL in Cohorts 3 & 4 on Day 1 of the first 21-day cycle. The concentration in the second and subsequent 21-day cycles were 10^7 (Cohorts 1 & 4) or 10^8 PFU/mL (Cohorts 2 & 3).

Arm title	Part 1: Monotherapy Group B

Arm description:

Participants with HCC were administered talimogene laherparepvec.

Arm type	Experimental
Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use

Dosage and administration details:

Initial concentration of 10^6 PFU/mL in a volume of up to 4mL in Cohorts 1 & 2 and up to a volume of 8 mL in Cohorts 3 & 4 on Day 1 of the first 21-day cycle. The concentration in the second and subsequent 21-day cycles were 10^7 (Cohorts 1 & 4) or 10^8 PFU/mL (Cohorts 2 & 3).

Arm title	Part 1: Combination Therapy Group A

Arm description:

Participants with non-HCC were administered talimogene laherparepvec and pembrolizumab.

Arm type	Experimental

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg on Day 1 of each 21-day cycle.

Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use

Dosage and administration details:

Initial concentration of 10^6 PFU/mL in a volume of up to 4mL in Cohorts 5 & 6 on Day 1 of the first 21-day cycle. The concentration in the second and subsequent 21-day cycles were 10^7 (Cohort 5) or 10^8 PFU/mL (Cohorts 6).

Arm title	Part 1: Combination Therapy Group B

Arm description:

Participants with HCC were administered talimogene laherparepvec and pembrolizumab.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg on Day 1 of each 21-day cycle.

Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use

Dosage and administration details:

Initial concentration of 10^6 PFU/mL in a volume of up to 4mL in Cohorts 5, 6a (participants without viral hepatitis) and 6b (participants with well controlled viral hepatitis) on Day 1 of the first 21-day cycle. The concentration in the second and subsequent 21-day cycles were 10^7 (Cohort 5) or 10^8 PFU/mL (Cohorts 6a and 6b).

Arm title	Part 2: Hormone Receptor Positive Breast Cancer (HRBC)

Arm description:

Participants with HRBC were administered talimogene laherparepvec and pembrolizumab.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg on Day 1 of each 21-day cycle.

Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection

Routes of administration	Intralesional use

Dosage and administration details:

At the maximum tolerated concentration (MTC) and maximum tolerated volume (MTV) identified in Part 1 on Day 1 of each 21-day cycle.

Arm title	Part 2: Triple Negative Breast Cancer (TNBC)

Arm description:

Participants with TNBC were administered talimogene laherparepvec and pembrolizumab.

Arm type	Experimental
Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use

Dosage and administration details:

At the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle.

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg on Day 1 of each 21-day cycle.

Arm title	Part 2: Cutaneous Squamous Cell Carcinoma (CSCC)

Arm description:

Participants with CSCC were administered talimogene laherparepvec and pembrolizumab.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg on Day 1 of each 21-day cycle.

Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use

Dosage and administration details:

At the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle.

Arm title	Part 2: Basal Cell Carcinoma (BCC)

Arm description:

Participants with BCC were administered talimogene laherparepvec and pembrolizumab.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details: 200 mg on Day 1 of each 21-day cycle.	
Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use
Dosage and administration details: At the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle.	
Arm title	Part 2: Colorectal Adenocarcinoma (CRC)
Arm description: Participants with CRC were administered talimogene laherparepvec and pembrolizumab.	
Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: 200 mg on Day 1 of each 21-day cycle.	
Investigational medicinal product name	Talimogene Laherparepvec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intralesional use
Dosage and administration details: At the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle.	

Number of subjects in period 1	Part 1: Monotherapy Group A	Part 1: Monotherapy Group B	Part 1: Combination Therapy Group A
Started	23	5	24
Received Talimogene Laherparepvec	23	5	24
Received Pembrolizumab	0	0 [1]	24
Completed	0	1	1
Not completed	23	4	23
Adverse event, serious fatal	21	3	22
Consent withdrawn by subject	2	-	1
Lost to follow-up	-	1	-

Number of subjects in period 1	Part 1: Combination Therapy Group B	Part 2: Hormone Receptor Positive Breast Cancer (HRBC)	Part 2: Triple Negative Breast Cancer (TNBC)
Started	22	10	18
Received Talimogene Laherparepvec	22	10	18
Received Pembrolizumab	22	10	18

Completed	4	1	1
Not completed	18	9	17
Adverse event, serious fatal	14	8	12
Consent withdrawn by subject	4	1	3
Lost to follow-up	-	-	2

Number of subjects in period 1	Part 2: Cutaneous Squamous Cell Carcinoma (CSCC)	Part 2: Basal Cell Carcinoma (BCC)	Part 2: Colorectal Adenocarcinoma (CRC)
Started	10	5	10
Received Talimogene Laherparepvec	10	5	10
Received Pembrolizumab	10	5	10
Completed	1	1	1
Not completed	9	4	9
Adverse event, serious fatal	5	4	8
Consent withdrawn by subject	4	-	1
Lost to follow-up	-	-	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.
Justification: Only participants in combination cohorts received pembrolizumab.

Baseline characteristics

Reporting groups	
Reporting group title	Part 1: Monotherapy Group A
Reporting group description:	
Participants with non-hepatocellular carcinoma (non-HCC) were administered talimogene laherparepvec.	
Reporting group title	Part 1: Monotherapy Group B
Reporting group description:	
Participants with HCC were administered talimogene laherparepvec.

Primary: Part 2 Only: Objective Response Rate (ORR) per Modified Immune-related Response Criteria Simulating Response Evaluation Criteria in Solid Tumors (irRC-RECIST)

End point title	Part 2 Only: Objective Response Rate (ORR) per Modified Immune-related Response Criteria Simulating Response Evaluation Criteria in Solid Tumors (irRC-RECIST)[1][2]

End point description:

ORR was defined as the percentage of participants with a best overall response of complete response (CR) or partial response (PR) per modified irRC-RECIST.

- CR: Disappearance of all lesions (whether measurable or not and whether baseline or new) and confirmation by a repeat, consecutive assessment no less than 4 weeks (28 days) from the date first documented. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to < 10 mm.
- PR: Decrease in tumor burden ≥ 30% relative to baseline confirmed by a consecutive assessment at least 4 weeks (28 days) after first documentation.

Full Analysis Set (Part 2): Included all participants in Part 2 who received at least 1 dose of talimogene laherparepvec and at least 1 dose of pembrolizumab in combination.

End point type	Primary

End point timeframe:

Up to 154 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: No comparative statistical analyses were planned.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: 'ORR' is a primary endpoint for Part 2 and a secondary endpoint for Part 1.

End point values	Part 2: Hormone Receptor Positive Breast Cancer (HRBC)	Part 2: Triple Negative Breast Cancer (TNBC)	Part 2: Cutaneous Squamous Cell Carcinoma (CSCC)	Part 2: Basal Cell Carcinoma (BCC)
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group

number (confidence interval 95%)	0.0 (0.0 to 30.8)			

Statistical analyses

No statistical analyses for this end point

Primary: Number of Participants Who Experienced a Dose Limiting Toxicity (DLT)

End point title	Number of Participants Who Experienced a Dose Limiting Toxicity (DLT)[3]

End point description:

All toxicities were graded using the Common Terminology Criteria for Adverse Events (CTCAE) version 4.03:
- Grade 1: Mild
- Grade 2: Moderate
- Grade 3: Severe or medically significant but not immediately life threatening
- Grade 4: Life threatening consequences
- Grade 5: Death related to adverse event (AE)

The occurrence of specific pre-defined toxicities during the DLT evaluation period were considered a DLT if judged by the investigator to be related to talimogene laherparepvec and/or pembrolizumab.

All Grade 5 toxicities, intolerable toxicities that lead to permanent discontinuation of talimogene laherparepvec and/or pembrolizumab and Grade 3 or higher AEs related to talimogene laherparepvec and/or pembrolizumab that resulted in a study treatment delay by > 2 weeks were considered DLTs.

The analysis set used was the DLT analysis set.

End point type	Primary

End point timeframe:

Cycle 1 and Cycle 2: Day 1 to Day 21

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: No comparative statistical analyses were planned.

End point title	Best Overall Response (BOR) per Modified irRC-RECIST

End point description:

BOR was defined as the number of participants with a best visit response in following order: CR, PR, stable disease (SD), progressive disease (PD), or unevaluable (UE) per modified irRC-RECIST.

- CR: Disappearance of all lesions and confirmation by assessment no less than 4 weeks (28 days) from the date first documented. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm.
- PR: Decrease in tumor burden ≥30% relative to baseline confirmed by a consecutive assessment at least 4 weeks (28 days) after first documentation.
- SD: Neither sufficient shrinkage to qualify for CR or PR nor sufficient increase to qualify for PD.
- PD: Increase in tumor burden ≥ 20 % and at least 5 mm absolute increase relative to nadir confirmation by a repeat, consecutive assessment no less than 4 weeks (28 days) from the date first documented PD.
- UE: Any lesion present at baseline which was not assessed or was unable to be evaluated.

Adverse events information

Timeframe for reporting adverse events:

From the first dose date to the earlier of 90 days for treatment-emergent SAEs or 30 days for other (non-serious) TEAEs after the last dose date (talimogene laherparepvec or pembrolizumab, whichever is later) or the participants initiated new therapy.

Adverse event reporting additional description:

Median [min, max] duration of exposure was 6.1 [0.1, 33.1] weeks in Part 1 monotherapy cohorts, 9.2 [0.1, 98.3] weeks in Part 1 combination cohorts and 6.1 [0.1, 109.3] weeks in Part 2.

Assessment type	Systematic

Reporting groups

Reporting group title	Part 1: Monotherapy Group A

Reporting group description:

Participants with non-hepatocellular carcinoma (non-HCC) were administered talimogene laherparepvec by intralesional injection at an initial concentration of 10^6 plaque forming unit (PFU)/mL in a volume of up to 4mL in Cohorts 1 & 2 and up to a volume of 8 mL in Cohorts 3 & 4 on Day 1 of the first 21-day cycle. The concentration of talimogene laherparepvec doses in the second and subsequent 21-day cycles were 10^7 (Cohorts 1 & 4) or 10^8 PFU/mL (Cohorts 2 & 3)

Reporting group title	Part 1: Combination Therapy Group A

Reporting group description:

Participants with non-hepatocellular carcinoma (non-HCC) were administered talimogene laherparepvec by intralesional injection at an initial concentration of 10^6 plaque forming unit (PFU)/mL in a volume of up to 4mL in Cohorts 5 & 6 on Day 1 of the first 21-day cycle. The concentration of talimogene laherparepvec doses in the second and subsequent 21-day cycles were 10^7 (Cohort 5) or 10^8 PFU/mL (Cohorts 6). Participants were also administered 200 mg of pembrolizumab on Day 1 of each 21-day cycle as an intravenous infusion.

Reporting group title	Part 1: Combination Therapy Group B

Reporting group description:

Participants with hepatocellular carcinoma (HCC) were administered talimogene laherparepvec by intralesional injection at an initial concentration of 10^6 plaque forming unit (PFU)/mL in a volume of up to 4mL in Cohorts 5, 6a (participants without viral hepatitis) and 6b (participants with well controlled viral hepatitis) on Day 1 of the first 21-day cycle. The concentration of talimogene laherparepvec doses in the second and subsequent 21-day cycles were 10^7 (Cohort 5) or 10^8 PFU/mL (Cohorts 6a and 6b). Participants were also administered 200 mg of pembrolizumab on Day 1 of each 21-day cycle as an intravenous infusion.

Reporting group title	Part 1: Monotherapy Group B

Reporting group description:

Participants with hepatocellular carcinoma (HCC) were administered talimogene laherparepvec by intralesional injection at an initial concentration of 10^6 plaque forming unit (PFU)/mL in a volume of up to 4mL in Cohorts 1 & 2 and up to a volume of 8 mL in Cohorts 3 & 4 on Day 1 of the first 21-day cycle. The concentration of talimogene laherparepvec doses in the second and subsequent 21-day cycles were 10^7 (Cohorts 1 & 4) or 10^8 PFU/mL (Cohorts 2 & 3).

Reporting group title	Part 2: Hormone Receptor Positive Breast Cancer (HRBC)

Reporting group description:

Participants with HRBC were administered talimogene laherparepvec by intralesional injection at the maximum tolerated concentration (MTC) and maximum tolerated volume (MTV) identified in Part 1 on Day 1 of each 21-day cycle. Participants were also administered 200 mg of pembrolizumab on Day 1 of each 21-day cycle as an intravenous infusion.

Reporting group title	Part 2: Triple Negative Breast Cancer (TNBC)

Reporting group description:

Participants with TNBC were administered talimogene laherparepvec by intralesional injection at the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle. Participants were also administered 200 mg of pembrolizumab on Day 1 of each 21-day cycle as an intravenous infusion.

Reporting group title	Part 2: Cutaneous Squamous Cell Carcinoma (CSCC)

Reporting group description:

Participants with CSCC were administered talimogene laherparepvec by intralesional injection at the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle. Participants were also administered 200 mg of pembrolizumab on Day 1 of each 21-day cycle as an intravenous infusion.

Reporting group title	Part 2: Basal Cell Carcinoma (BCC)

Reporting group description:

Participants with BCC were administered talimogene laherparepvec by intralesional injection at the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle. Participants were also administered 200 mg of pembrolizumab on Day 1 of each 21-day cycle as an intravenous infusion.

Reporting group title	Part 2: Colorectal Adenocarcinoma (CRC)

Reporting group description:

Participants with CRC were administered talimogene laherparepvec by intralesional injection at the MTC and MTV identified in Part 1 on Day 1 of each 21-day cycle. Participants were also administered 200 mg of pembrolizumab on Day 1 of each 21-day cycle as an intravenous infusion.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 April 2016	The following updates were made: • The criteria for grade 3 or higher non-hematologic laboratory values that define DLT were changed so that those that persist for > 1 week which were deemed not clinically important by both the investigator and sponsor did not trigger a DLT. Any grade 3 or higher non-hematologic laboratory value was still be considered a DLT if medical intervention was required or if it led to hospitalization. • Treatment could continue for grade 3 or higher non-hematologic laboratory values that persisted for > 1 week and were deemed not clinically important by both the investigator and sponsor so that participants could continue study treatment in spite of persistently elevated non-hematologic laboratory values with no clinical significance and long half-lives such as gamma-glutamyl transferase (GGT). • Added hepatitis D viral ribonucleic acid (RNA) as another acceptable method of testing as some institutions did not use hepatitis D serology testing. • The irRC-RECIST criteria definition was edited to make it more consistent with the conventional RECIST criteria and irRC simulating RECIST by Nishino et al. • Clarified certain laboratory tests and timing of study procedures. • Administration and editorial corrections. • Updated adverse event and disease related event language to clarify definitions and reporting periods. • Specified time points for liver tumor biopsies
18 October 2017	The following updates were made: • Added a collaborator drug, pembrolizumab, from Merck. • Aligned with more recent protocol template text. • Editorial changes (ie, typographic, grammatical, and formatting errors) and abbreviation corrections were made throughout the protocol in accordance with Amgen Inc. Style Guide.

21 October 2019	The following updates were made: • Updated study title. • Allowed intratumoral injection of talimogene laherparepvec into cutaneous, subcutaneous, and liver lesions and involved lymph nodes in Part 2 of the study. • Clarified that liver injection was not a requirement or priority in Part 2. • Expanded allowable injectable disease. • Changed the tumor types in Part 2. • Created additional BC cohort. • Created additional HCC cohort. • Allowed for well controlled viral hepatitis and allowed antiviral therapy in new cohort 6B for HCC in Part 1 and Arm VI in Part 2 of the study. • Updated study scheme. • Updated eligibility criteria. • Shortened 23 hour observation window to 6 hours in Part 2. • Added collection of PATCH 1 (PTCH) mutation status in BCC cohort if available. • Added collection of breast cancer type 1 (BRCA1) and 2 mutation status in BC cohort if available. • Added optional liver ultrasound to schedule of assessments. • Removed 24 hour and 48 hour timepoints in Week 1 and Week 4 from Part 2 schedule of assessments. • Removed assessments for anti pembrolizumab antibodies, and pembrolizumab pharmacokinetics (PK) in Part 2. • Removed blood, urine and swab collection at 24 and 48 hours in Part 2. • Allowed continuation of talimogene laherparepvec after Cycle 12 in Part 2. • Clarified maximum number of cycles. • Allowed resumption of talimogene laherparepvec at progression • Allowed up to 8 mL of talimogene laherparepvec to be used in Part 2 if 8 mL was shown safe in either Group A or B in Part 1. • Added clinical tumor assessments in Part 2. • Created a separate schedule of assessment table for Part 2. • Revised list of laboratory analytes. • Added language regarding events of clinical interest. • Added disease related events (DRE) language. • Removed language on self-evident corrections. • Updated HCC data in background and rationale sections. • Updated CTCAE version. • Updated references. • Administrative and editorial changes.
30 June 2020	The following updates were made: • Removed the 6 hour observation period and associated assessments for Part 2 participants not receiving intrahepatic injections. • Only included Part 2 enrolled participants as part of the efficacy futility analyses. • Combined arms VI and VII. • Made updates to collection time points of cytokines and qPCR. • Decreased sample size from 244 to 206. • Clarified inclusion criterion for triple negative breast cancer participants (inclusion criterion 114). • Updated administrative edits.

02 July 2021	The following updates were made: • Fixed the minor discrepancies and inconsistencies within the protocol. • Clarified medical monitor approval requirements for continuing talimogene in Part 1 and Part 2. • Updated exclusion criteria 207 to separate pneumonitis into standalone criteria 238. • Updated exclusion criteria 207 to separate pneumonitis into standalone criteria 238. • Removed the exclusion of prior checkpoint inhibitors for BCC patients to reflect the approval of cemiplimab in this population. • Updated Dose Modification and Toxicity Management Guidelines for Immune-related Adverse Events Associated With Pembrolizumab. • Updated an exception considered to continue treatment beyond progression. • updated the requirement to report fatal DREs as SAEs. • Clarified the interim safety analysis language in Part 2. • Updated SAE reporting forms. • Updated pregnancy and lactation notification forms. • Clarified primary and final analyses clinical study report (CSR) plans. • Aligned the protocol with current protocol template and safety reporting language. • Typographic, formatting and editorial changes were made.
26 October 2021	The protocol was amended to stop study-related hepatic biopsies and hepatic injections of talimogene laherparepvec based on the overall safety assessment of the hepatic hemorrhage signal following two serious adverse events of hepatic haemorrhage that resulted in death in the study. While the full safety assessment results did not suggest an increased risk of hepatic haemorrhage with talimogene laherparepvec as a medication, there was a potential risk of hepatic haemorrhage with the transcutaneous intrahepatic route of administration of talimogene laherparepvec and hepatic biopsies. As a result, the protocol is amended to remove these procedures from study conduct. Additionally, the final enrollment numbers were updated in the protocol as enrollment had stopped for this study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
