

Clinical trial results:

A Phase 2, Randomized Study of MLN0128 (a Dual TORC1/2 Inhibitor), MLN0128+MLN1117 (a PI3K Inhibitor), Weekly Paclitaxel, or the Combination of Weekly Paclitaxel and MLN0128 in Women With Advanced, Recurrent, or Persistent Endometrial Cancer

Summary

EudraCT number	2014-005394-37
Trial protocol	BE ES DE NL IT
Global end of trial date	30 October 2020

Results information

Result version number	v2 (current)
This version publication date	29 June 2024
First version publication date	13 November 2021
Version creation reason	• Correction of full data set Update

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 October 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 October 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial is to determine if sapanisertib in combination with weekly paclitaxel improves progression-free survival (PFS) compared to weekly paclitaxel alone.

Protection of trial subjects:

All study participants were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 April 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 16
Country: Number of subjects enrolled	Belgium: 20
Country: Number of subjects enrolled	Germany: 11
Country: Number of subjects enrolled	Italy: 49
Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	Norway: 5
Country: Number of subjects enrolled	Spain: 28
Country: Number of subjects enrolled	United Kingdom: 21
Country: Number of subjects enrolled	Canada: 27
Country: Number of subjects enrolled	United States: 59
Worldwide total number of subjects	241
EEA total number of subjects	118

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	123
From 65 to 84 years	118
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 60 investigative sites in Australia, Belgium, Germany, Italy, Netherlands, Norway, Spain, United Kingdom, Canada and the United States from 01 April 2016 to 30 October 2020.

Pre-assignment

Screening details:

The female participants with a diagnosis of endometrial carcinoma were enrolled and randomized into 1:1:1:1 ratio to receive single agent paclitaxel, paclitaxel in combination with sapanisertib, single agent sapanisertib or sapanisertib in combination with MLN1117.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Paclitaxel 80 mg/m ²

Arm description:

Paclitaxel 80 milligrams per square meter (mg/m²), IV, injection, weekly on Days 1, 8, and 15 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 13.00 weeks).

Arm type	Experimental
Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Paclitaxel 80 mg/m² intravenous solution for injection.

Arm title	Paclitaxel 80 mg/m ² + Sapanisertib 4 mg
------------------	---

Arm description:

Paclitaxel 80 mg/m², IV, injection, weekly on Days 1, 8, and 15 of a 28-day cycle along with sapanisertib 4 milligrams (mg), capsule, orally on Days 2-4, 9-11, 16-18, and 23-25 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 20.14 and 18.50 weeks).

Arm type	Experimental
Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Paclitaxel intravenous solution for injection.

Investigational medicinal product name	Sapanisertib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Sapanisertib Capsules

Arm title	Sapanisertib 30 mg
------------------	--------------------

Arm description:

Sapanisertib 30 mg, capsule, orally, once weekly on Days 1, 8, 15, and 22 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 6.14 weeks).

Arm type	Experimental
Investigational medicinal product name	Sapanisertib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Sapanisertib capsules

Arm title	Sapanisertib 4 mg + MLN1117 200 mg
------------------	------------------------------------

Arm description:

Sapanisertib 4 mg, capsule, orally and MLN1117 200 mg, capsule, orally on Days 1-3, 8-10, 15-17, and 22-24 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 7.43 weeks).

Arm type	Experimental
Investigational medicinal product name	MLN1117
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

MLN1117 Capsules

Investigational medicinal product name	Sapanisertib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Sapanisertib Capsules

Primary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS)
End point description: PFS is defined as the time in months from the date of randomization to the date of first documentation of progressive disease (PD) or death due to any cause, whichever occurs first. Per RECIST v1.1, PD was defined as at least a 20% increase in the sum of the longest diameter (LD) of target lesions, taking as reference the smallest sum LD recorded since the treatment started or the appearance of one or more new lesions. ITT population included all randomized participants. For a participants who had not progressed and was last known to be alive, PFS was censored at the last response assessment that is stable disease (SD) or better.	
End point type	Primary
End point timeframe: Up to approximately 30 months

[18] - The p-value was obtained using stratified log-rank test with histological subtype, lines of prior chemotherapy and prior taxane therapy (original stratification values).

Secondary: Overall Response Rate (ORR)

End point title	Overall Response Rate (ORR)
-----------------	-----------------------------

End point description:

ORR is defined as the percentage of participants who achieved a best response of a complete response (CR) or partial response (PR). Per RECIST v1.1, CR was defined as disappearance of all target lesions, non-target lesions, no new lesions, and normalization of tumor marker level. PR was defined as at least a 30% decrease in the sum of diameters of target lesions, no progression in non-target lesion, and no new lesions. Safety population included participants who received at least 1 dose of study drug.

Secondary: Clinical Benefit Rate (CBR)

End point title	Clinical Benefit Rate (CBR)
End point description:	
CBR is defined as the percentage of participants with CR or PR or SD (SD of any duration). Per RECIST v1.1, CR was defined as disappearance of all target lesions, non-target lesions, no new lesions, and normalization of tumor marker level. PR is defined as at least a 30% decrease in the sum of diameters of target lesions, no progression in non-target lesion, and no new lesions. SD was defined as neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD. PD was defined as at least a 20% increase in the sum of the longest diameter (LD) of target lesions, taking as reference the smallest sum LD recorded since the treatment started or the appearance of one or more new lesions. Safety population included participants who received at least 1 dose of study drug.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to the end of study (approximately up to 54 months)

Adverse event reporting additional description:

At each visit investigator had to document any occurrence of AEs and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of relation to study treatment. All-cause mortality:ITT population(n= 90,90,41,20). Serious and other(non-serious) AEs:Safety population.

Assessment type	Systematic

Reporting groups

Reporting group title	Paclitaxel 80 mg/m ²
-----------------------	---------------------------------

Reporting group description:

Paclitaxel 80 milligrams per square meter (mg/m²), IV, injection, weekly on Days 1, 8, and 15 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 13.00 weeks).

Reporting group title	Paclitaxel 80 mg/m ² + Sapanisertib 4 mg
-----------------------	---

Reporting group description:

Paclitaxel 80 mg/m², IV, injection, weekly on Days 1, 8, and 15 of a 28-day cycle along with sapanisertib 4 milligrams (mg), capsule, orally on Days 2-4, 9-11, 16-18, and 23-25 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 20.14 and 18.50 weeks).

Reporting group title	Sapanisertib 30 mg
-----------------------	--------------------

Reporting group description:

Sapanisertib 30 mg, capsule, orally, once weekly on Days 1, 8, 15, and 22 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 6.14 weeks).

Reporting group title	Sapanisertib 4 mg + MLN1117 200 mg
-----------------------	------------------------------------

Reporting group description:

Sapanisertib 4 mg, capsule, orally and MLN1117 200 mg, capsule, orally on Days 1-3, 8-10, 15-17, and 22-24 of a 28-day cycle until disease progression, unacceptable toxicity, or withdraw consent (the median exposure was 7.43 weeks).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 February 2016	The primary purpose of this amendment was to revise dosing regimens for sapanisertib, Added EudraCT number and Millennium corporate identification to Title page. Updated study overview diagram, schedule of events section. Added alternative names for sapanisertib and MLN1117. Decreased the dose of sapanisertib in Arms B and D from 8 mg to 4 mg. Added the combination of sapanisertib + MLN1117 for the investigator to consider when assessing whether AE is possibly related to study drug. Revised maximum dose reduction from 2 to 3 for sapanisertib. Revised paclitaxel, sapanisertib dose reduction guidelines. Added magnetic resonance imaging (MRI) as an optional method of disease assessment. Clarified that PK samples was to be collected from participants in Arm B, C, and D only. Added description suspected expected SAEs reporting. Updated Product Complaint contact information.
19 May 2016	The primary purpose of this amendment was to revise the study population to exclude participants with a known severe hypersensitivity reaction to prior paclitaxel exposure, active hepatitis B and hepatitis C in D infections and were lactating and breastfeeding to have a positive serum pregnancy test. Added an exclusion criterion regarding history of severe hypersensitivity reaction to paclitaxel.
17 April 2017	The primary purpose of this amendment was to update the dosing conditions for the subjects receiving weekly sapanisertib in Arm C, to update the pharmacokinetic (PK) sampling schedule to reflect the dosing change in Arm C, to clarify the procedure and/or timing for collection and clinical laboratory evaluations, to clarify the sapanisertib and paclitaxel dosing instructions, to update the window for obtaining informed consent and to update the procedure for reporting drug exposure during pregnancy with birth events. Added a PK sample collection at 3 to 6 hours postdose on Cycle 1 Day 1 for participants receiving weekly sapanisertib in Arm C. Replaced references relating to QD or QD5D dosing with appropriate dosing instructions. Clarified that informed consent may be signed more than 28 days before Cycle 1 Day 1.
25 September 2017	The primary purpose of this amendment was to update those sections affected by nonclinical data for sapanisertib metabolism by specific cytochrome P (CYP) isoforms. Removed the exclusion criterion relating to treatment with strong CYP inhibitors or inducers. Updated the list of concomitant medications prohibited during the study. Updated the description of potential drug-drug interactions in Arm D. Updated the list of CYP inhibitors or inducers. Removed dietary restrictions related to CYP inhibitors and inducers.
22 January 2018	The primary purpose of this amendment was to update the sample size of the study to reflect changes in study design and the closure of enrollment into Arms C and D. Update the Global Clinical Lead of the study. Added the sensitivity analysis of efficacy endpoints may be performed.
01 March 2020	The primary purpose of this amendment was to remove in-home glucose monitoring., long-term follow up (PFS follow up and/or OS follow up) for participants after end of treatment. Update the Global Clinical Lead of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
