Clinical trial results:
A Phase 3 Randomized, Double-Blind, Placebo-Controlled Study of LY2951742 with a Long-Term Open-Label Extension in Patients with Chronic Cluster Headache

Summary

EudraCT number	2014-005429-11
Trial protocol	GB DE ES DK FI BE FR NL GR IT
Global end of trial date	14 August 2019

Results information

Result version number	v1 (current)
This version publication date	30 August 2020
First version publication date	30 August 2020

Trial information

Trial identification

Sponsor protocol code	I5Q-MC-CGAM

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02438826
WHO universal trial number (UTN)	-
Other trial identifiers	Trial Number: 15781

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 August 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	14 August 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study is to evaluate the efficacy of the study drug known as galcanezumab in participants with chronic cluster headache.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Greece: 1
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Netherlands: 10
Country: Number of subjects enrolled	Belgium: 32
Country: Number of subjects enrolled	United States: 33
Country: Number of subjects enrolled	Finland: 4
Country: Number of subjects enrolled	Denmark: 9
Country: Number of subjects enrolled	Italy: 31
Country: Number of subjects enrolled	United Kingdom: 16
Country: Number of subjects enrolled	France: 40
Country: Number of subjects enrolled	Germany: 42
Country: Number of subjects enrolled	Spain: 11
Worldwide total number of subjects	237
EEA total number of subjects	196

Notes:

Subjects enrolled per age group

In utero	0

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	236
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

No Text Available

Pre-assignment

Screening details:

Study consists of a 12-week double-blind treatment phase; an optional 1-year open-label treatment phase; and a 16-week post-treatment phase (washout).

Period 1

Period 1 title	Double-Blind Treatment (DBT) Phase
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo once a month by subcutaneous (SC) injection for 3 months.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

3 subcutaneous injections of placebo administered once a month for 3 months.

Arm title	Galcanezumab 300 mg

Arm description:

Participants received galcanezumab 300 mg once a month by subcutaneous (SC) injection for 3 months.

Arm type	Experimental
Investigational medicinal product name	Galcanezumab 300 mg
Investigational medicinal product code	
Other name	LY2951742
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

300 mg of galcanezumab administered as subcutaneous injection for 3 months.

Number of subjects in period 1	Placebo	Galcanezumab 300 mg
Started	123	117
Received at Least 1 Dose of Study Drug	120	117
Completed	117	113
Not completed	6	4
Consent withdrawn by subject	1	1
Screen Failure	2	-
Adverse event, non-fatal	1	1
Lack of efficacy	1	-
Protocol deviation	1	2

Period 2

Period 2 title	Received at least 1 dose (DBT) - Period1
Is this the baseline period?	Yes[1]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	No
Arm title	Placebo

Arm description:

Participants received placebo once a month by subcutaneous (SC) injection for 3 months.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

3 subcutaneous injections of placebo administered once a month for 3 months.

Arm title	Galcanezumab 300 mg

Arm description:

Participants received galcanezumab 300 mg once a month by subcutaneous (SC) injection for 3 months.

Arm type	Experimental
Investigational medicinal product name	Galcanezumab 300 mg
Investigational medicinal product code	
Other name	LY2951742
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

300 mg of galcanezumab administered as subcutaneous injection for 3 months.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Participants must have completed the double-blind phase to enter the optional open-label phase. One placebo treated participant chose not to enter the open-label phase.

Number of subjects in period 2	Placebo	Galcanezumab 300 mg
Started	120	117
Completed	117	113
Not completed	3	4
Consent withdrawn by subject	1	1
Adverse event, non-fatal	1	1
Lack of efficacy	1	-
Protocol deviation	-	2

Period 3

Period 3 title	Open-Label Treatment Phase-Period 2
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/GMB 300 mg

Arm description:

Participants from placebo group received 300 mg of galcanezumab (GMB) by subcutaneous injection every 30 days, for up to a total of 12 administrations.

Arm type	Experimental
Investigational medicinal product name	Galcanezumab 300 mg
Investigational medicinal product code	
Other name	LY2951742
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

300 mg of galcanezumab administered as subcutaneous injections every 30 days, for up to a total of 12 administrations.

Arm title	GMB 300 mg/GMB 300 mg

Arm description:

Participants from galcanezumab group received 300 mg of galcanezumab by subcutaneous injection every 30 days, for up to a total of 12 administrations.

Arm type	Experimental
Investigational medicinal product name	Galcanezumab 300 mg
Investigational medicinal product code	
Other name	LY2951742
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

300 mg of galcanezumab administered as subcutaneous injections every 30 days, for up to a total of 12

administrations.

Number of subjects in period 3	Placebo/GMB 300 mg	GMB 300 mg/GMB 300 mg
Started	116	113
Completed	72	80
Not completed	44	33
Consent withdrawn by subject	6	7
Adverse event, non-fatal	11	6
Lost to follow-up	-	2
Lack of efficacy	27	18

Period 4	
Period 4 title	Post-Treatment Phase-Period 3
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms	
Are arms mutually exclusive?	No
Arm title	Placebo/GMB 300 mg (Open-Label Treatment Phase)

Arm description:

Participants from Open-Label Treatment Phase entered this phase, they have not received any intervention during this post-treatment period.

Arm type	No intervention

No investigational medicinal product assigned in this arm

Arm title	GMB 300 mg/GMB 300 mg (Open-Label Treatment Phase)

Arm description:

Participants from Open-Label Treatment Phase entered this phase, they have not received any intervention during this post-treatment period.

Arm type	No intervention

No investigational medicinal product assigned in this arm

Arm title	Placebo (Double-Blind Treatment Phase)

Arm description:

Participants from double blind treatment group entered this phase, they have not received any intervention during this post-treatment period.

Arm type	No intervention

No investigational medicinal product assigned in this arm

Arm title	Galcanezumab 300 mg (Double-Blind Treatment Phase)

Arm description:

Participants from double blind treatment group entered this phase, they have not received any intervention during this post-treatment period.

Arm type	No intervention

No investigational medicinal product assigned in this arm

Primary: Overall Mean Change from Baseline in Weekly Cluster Headache Attack Frequency

End point title	Overall Mean Change from Baseline in Weekly Cluster Headache Attack Frequency

End point description:

Number of cluster headache attacks was recorded daily by study participants in their ePRO Diary, Baseline and 12 weeks of daily data during double-blind treatment phase will be converted into 14-calendar day intervals: the baseline 14-day interval, Weeks 1/2, 3/4, 5/6, 7/8, 9/10, and 11/12. Next, the biweekly interval results were adjusted to 7-day (weekly) interval in order to report the outcome as weekly frequency. Overall mean change from baseline is derived from mixed model repeated measures (MMRM) analysis. Least Square (LS) means were calculated using MMRM model with treatment, sex, verapamil use, pooled investigative site, week, baseline, and treatment by week as fixed effects. Analysis Population Description: All randomized participants who received at least 1 dose of study drug,

and had baseline and at least one post baseline value.

End point type	Primary

End point timeframe:

Baseline, Week 1 through Week 12

Secondary: Percentage of Participants with a 50% or Greater Reduction from Baseline in the Weekly Number of Cluster Headache Attacks

End point title	Percentage of Participants with a 50% or Greater Reduction from Baseline in the Weekly Number of Cluster Headache Attacks

End point description:

A 50% responder is any participant who has a ≥50% reduction from baseline in the weekly number of cluster headache attacks in a 14-day interval: Weeks 1/2, Weeks 3/4, Weeks 5/6, Weeks 7/8, Weeks 9/10, and Weeks 11/12. Mean percentage of participants is derived from the average of weeks 1/2 to weeks 11/12 from generalized linear mixed model repeated measures method with treatment, sex, verapamil use, week, treatment by week, and baseline as fixed effects.

APD: All randomized participants who received at least 1 dose of study drug, and had baseline and at least 1 post baseline value.

Secondary: Percentage of Participants With a Sustained Response of 50% or Greater Reduction From Baseline in the Weekly Number of Cluster Headache Attacks

End point title	Percentage of Participants With a Sustained Response of 50% or Greater Reduction From Baseline in the Weekly Number of Cluster Headache Attacks

End point description:

Sustained Response is defined as a 50% or greater reduction in the weekly cluster attack frequency from baseline to Weeks 3/4 and maintained at Weeks 5/6, Weeks 7/8, Weeks 9/10, and Weeks 11/12. Percentage of participants with a sustained response was analyzed using Koch's nonparametric randomization-based analysis of covariance method. This method adjusted for pooled investigative site by including it as a stratification variable. It also adjusted for sex, verapamil use and baseline value. APD: All randomized participants who received at least 1 dose of study drug, had a baseline, and at least one post baseline value.

Secondary: Percentage of Participants Developing Anti-Drug Antibodies (ADA) to Galcanezumab (LY2951742)

End point title	Percentage of Participants Developing Anti-Drug Antibodies (ADA) to Galcanezumab (LY2951742)

End point description:

Treatment emergent (TE) ADA evaluable participant is considered to be TE ADA+ if the subject has at least one post-baseline titer that is a 4-fold or greater increase in titer from baseline measurement. If baseline result is ADA Not Present, then the participant is TE ADA+ if there is at least one post-baseline result of ADA present with titer >= 1: 20.

APD: All randomized participants who received at least one dose of study drug and had non-missing baseline ADA result, and at least one non-missing post baseline ADA result.

End point type	Secondary

End point timeframe:

Baseline, Week 1 through Week 12

End point values	Placebo	Galcanezumab 300 mg

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 1 Year 7 Months

Adverse event reporting additional description:

All randomized participants who received at least 1 dose of study drug.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	22.0

Reporting groups

Reporting group title	Placebo - Double-Blind Treatment Phase

Reporting group description:

Participants received placebo once a month by subcutaneous (SC) injection for 3 months.

Reporting group title	Galcanezumab 300mg - Double-Blind Treatment Phase

Reporting group description:

Participants received galcanezumab 300 mg once a month by subcutaneous (SC) injection for 3 months.

Reporting group title	Placebo/Galcanezumab 300mg - Open-Label Treatment Phase

Reporting group description:

Participants from placebo group received galcanezumab (GMB) as three 100 mg subcutaneous injections every 30 days, for up to a total of 12 administrations.

Reporting group title	Galcanezumab 300mg/Galcanezumab 300mg - Open-Label Treatment

Reporting group description:

Participants from galcanezumab group received galcanezumab as three 100 mg subcutaneous injections every 30 days, for up to a total of 12 administrations.

Reporting group title	Placebo - Follow-up Phase

Reporting group description:

Participants from double blind treatment group entered this phase, they have not received any intervention during this post-treatment period.

Reporting group title	Galcanezumab 300mg - Follow-up Phase

Reporting group description:

Participants from double blind treatment group entered this phase, they have not received any intervention during this post-treatment period.

Reporting group title	Placebo/Galcanezumab 300mg - Follow-up Phase

Reporting group description:

Participants from Open-Label Treatment Phase entered this phase, they have not received any intervention during this post-treatment period.

Reporting group title	Galcanezumab 300mg/Galcanezumab 300mg - Follow-up Phase

Reporting group description:

Participants from Open-Label Treatment Phase entered this phase, they have not received any intervention during this post-treatment period.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: Gender specific events occurring only in male or female participants have had the number of participants at risk adjusted accordingly.
[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: Gender specific events occurring only in male or female participants have had the number of participants at risk adjusted accordingly.
[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: Gender specific events occurring only in male or female participants have had the number

of participants at risk adjusted accordingly.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: Gender specific events occurring only in male or female participants have had the number of participants at risk adjusted accordingly.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification: Gender specific events occurring only in male or female participants have had the number of participants at risk adjusted accordingly.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 March 2015	Protocol (a) 1) Updated planned duration of treatment. 2) Updated primary endpoint duration. 3) Updated Inclusion and Exclusion Criteria.
22 December 2015	Protocol (b) -Added rescreening details (Inclusion Criteria 3).
10 February 2017	Protocol (c) -Updated rescreening details (Inclusion Criterion 3b and Exclusion Criterion 24d).
28 March 2018	Protocol (d): 1) Duration of primary analysis was changed from Week 3/4 to 12-Week. 2) Updated blinding information.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
