Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No
----------------------------------------------------------------------	----

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 December 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 January 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Evaluate the safety and assess the clinical activity of IPI-145 in combination with rituximab or obinutuzumab in subjects with previously untreated CD20+ follicular lymphoma (FL)

Protection of trial subjects:

Prior to screening for enrollment into the clinical trial, all patients were provided detailed information about the investigational product and the trial. During the informed consent process, patients were allowed to ask questions and have a conversation with the study staff providing consent. The informed consent form (ICF) included all elements required by ICH, GCP, and adhered to the IRB/IEC requirements and the ethical principles that have their origin in the Declaration of Helsinki. It was explained to patients during this conversation that they have the right to withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. The ICF was updated when important new information became available, and all patients still receiving treatment in the trial were re-consented on the new information.

During the trial, protection of trial subjects took the form of adverse event and concomitant medication monitoring, and disease response monitoring. Adverse events (AEs) were monitored from the time of signing the ICF. The Protocol provided information on what concomitant medication and therapies were either not allowed or should be used with caution. An assessment of these medications and therapies was performed at every clinic visit. Lastly, disease response assessments were performed according to the schedule stipulated in the Protocol. If a study subject progressed, appropriate conversations were had with their study investigator to determine the best course of action for further treatment or management of their disease, outside of the clinical trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 May 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 13
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	United States: 19

Worldwide total number of subjects	55
EEA total number of subjects	36

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	36
From 65 to 84 years	19
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The Screening Period Assessments will occur over a period of up to 30 days prior to first dose of study drug (Cycle 1 Day 1).

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Duvelisib (25 mg BID) + Rituximab

Arm description:

Subjects self-administered duvelisib orally continuously twice per day (BID) over 28-day treatment cycles. Rituximab was administered as an intravenous (IV) infusion (375 mg/m²) in four weekly doses in an Induction Period and then a dose was administered every 2 cycles (12 doses) in the Maintenance Period for a total of up to 16 doses.

Arm type	Experimental
Investigational medicinal product name	Duvelisib
Investigational medicinal product code	IPI-145
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Duvelisib will be self-administered BID at a starting dose of 25 mg (or, if determined by DLT assessment, a lower dose of 15 mg) in 28-day cycles beginning on the morning of Cycle 1 Day 1.

Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab will be administered by IV infusion at a dose of 375 mg/m². A treatment cycle is defined as lasting 28 days.

Arm title	Duvelisib (25 mg BID) + Obinutuzumab
------------------	--------------------------------------

Arm description:

Subjects self-administered duvelisib orally continuously BID over 28-day treatment cycles. Obinutuzumab was administered as an IV infusion (1000 mg) in four weekly doses in the Induction Period and then a dose was administered every 2 cycles (12 doses) in the Maintenance Period for a total of up to 16 doses.

Arm type	Experimental
Investigational medicinal product name	Duvelisib
Investigational medicinal product code	IPI-145
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Duvelisib will be self-administered BID at a starting dose of 25 mg (or, if determined by DLT assessment, a lower dose of 15 mg) in 28-day cycles beginning on the morning of Cycle 1 Day 1.

Investigational medicinal product name	Obinutuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Obinutuzumab will be administered by IV infusion at a dose of 1000 mg. A treatment cycle is defined as lasting 28 days.

Number of subjects in period 1	Duvelisib (25 mg BID) + Rituximab	Duvelisib (25 mg BID) + Obinutuzumab
Started	28	27
Completed	0	1
Not completed	28	26
Consent withdrawn by subject	1	-
Death	2	-
Other	4	6
Termination of the study by the sponsor	20	20
Lost to follow-up	1	-

Baseline characteristics

Reporting groups

Reporting group title	Duvelisib (25 mg BID) + Rituximab
-----------------------	-----------------------------------

Reporting group description:

Subjects self-administered duvelisib orally continuously twice per day (BID) over 28-day treatment cycles. Rituximab was administered as an intravenous (IV) infusion (375 mg/m²) in four weekly doses in an Induction Period and then a dose was administered every 2 cycles (12 doses) in the Maintenance Period for a total of up to 16 doses.

Reporting group title	Duvelisib (25 mg BID) + Obinutuzumab
-----------------------	--------------------------------------

Reporting group description:

Subjects self-administered duvelisib orally continuously BID over 28-day treatment cycles. Obinutuzumab was administered as an IV infusion (1000 mg) in four weekly doses in the Induction Period and then a dose was administered every 2 cycles (12 doses) in the Maintenance Period for a total of up to 16 doses.

Reporting group values	Duvelisib (25 mg BID) + Rituximab	Duvelisib (25 mg BID) + Obinutuzumab	Total
Number of subjects	28	27	55
Age categorical Units: Subjects			
Adults (18-64 years)	20	16	36
From 65-84 years	8	11	19
Age continuous Units: years			
arithmetic mean	58.2	58.4	
full range (min-max)	36 to 79	32 to 77	-
Gender categorical Units: Subjects			
Female	10	16	26
Male	18	11	29

End points

End points reporting groups

Reporting group title	Duvelisib (25 mg BID) + Rituximab
Reporting group description: Subjects self-administered duvelisib orally continuously twice per day (BID) over 28-day treatment cycles. Rituximab was administered as an intravenous (IV) infusion (375 mg/m ²) in four weekly doses in an Induction Period and then a dose was administered every 2 cycles (12 doses) in the Maintenance Period for a total of up to 16 doses.	
Reporting group title	Duvelisib (25 mg BID) + Obinutuzumab
Reporting group description: Subjects self-administered duvelisib orally continuously BID over 28-day treatment cycles. Obinutuzumab was administered as an IV infusion (1000 mg) in four weekly doses in the Induction Period and then a dose was administered every 2 cycles (12 doses) in the Maintenance Period for a total of up to 16 doses.	

Primary: Dose Limiting Toxicities

End point title	Dose Limiting Toxicities ^[1]
End point description: The dose limiting toxicity (DLT)-Evaluable analysis set was defined as all subjects in Part 1 of the study who either experienced a DLT during Cycle 1 or completed at least 75% of the prescribed Cycle 1 doses of duvelisib and rituximab or duvelisib and obinutuzumab. This analysis set was used to determine the dose level for Part 2. One DLT occurred in the DO arm: Grade 3 elevated lipase on Day 8 of study treatment. Treatment with duvelisib was interrupted and obinutuzumab was continued.	
End point type	Primary
End point timeframe: All subjects in Part 1 of the study who either experienced a DLT during Cycle 1 or completed at least 75% of the prescribed Cycle 1 doses of duvelisib and rituximab or duvelisib and obinutuzumab.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The sample size for the entire study was calculated to be approximately 120 subjects; however, the study was terminated early by the Sponsor.

Analysis Sets:

As the study was terminated early, the SAP was not finalized and basic disposition, demographic/background information, safety and efficacy analyses were based on analyses performed for presentations at ASH and EHA (2016).

This study was to enrol approximately 120 subjects, 55 subjects were enrolled and analysed.

End point values	Duvelisib (25 mg BID) + Rituximab	Duvelisib (25 mg BID) + Obinutuzumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	6 ^[2]		
Units: Number of subjects	0	1		

Notes:

[2] - 1 DLT in DO arm: Treatment with duvelisib was interrupted and obinutuzumab was continued.

Statistical analyses

No statistical analyses for this end point

Primary: Complete Response (CR)

End point title	Complete Response (CR) ^[3]
-----------------	---------------------------------------

End point description:

CRR was tested against the null ($\leq 15\%$) by a 1-sided exact binomial test at 0.05 level for each arm separately. The estimated CRR along with the 2-sided 95% exact confidence interval was provided. Subjects with missing data for overall response was assumed as not having achieved a CR.

In the DR arm, 10 (35.7%) subjects had a best response of Complete Response (CR).

In the DO arm, 11 (40.7%) subjects had a best response of Complete Response (CR).

End point type	Primary
----------------	---------

End point timeframe:

Throughout the study

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

For all subjects (including screen-failures), monitoring of AEs will be performed from the signing of the ICF through 30 days after the last dose or until the subject is deemed a study failure.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 February 2015	Amendment 1, Global
22 October 2015	Amendment 2, Global
19 September 2016	Amendment 3, Global. Amendment 3 was not submitted in the EU but was submitted in US but never implemented. No subjects were enrolled under Amendment 3.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
16 June 2016	On the 16th June an Administrative Letter requesting an enrollment hold in Europe until Amendment 3 was approved was issued to all EU investigators.	-

Notes:

Limitations and caveats

None reported
