

Clinical trial results: Anti-platelet Therapy in the Primary Prevention of Cardiovascular Disease in Patients with Chronic Obstructive Pulmonary Disease. Summary

EudraCT number	2014-005475-86
Trial protocol	GB
Global end of trial date	10 November 2017

Results information

Result version number	v1 (current)
This version publication date	29 March 2019
First version publication date	29 March 2019

Trial information

Trial identification

Sponsor protocol code	7356
-----------------------	------

Additional study identifiers

ISRCTN number	ISRCTN43245574
ClinicalTrials.gov id (NCT number)	NCT03487406
WHO universal trial number (UTN)	-

Notes:

Sponsors

Sponsor organisation name	The Newcastle upon Tyne Hospitals NHS Foundation Trust
Sponsor organisation address	Level 1, Regent Point, Gosforth, Newcastle upon Tyne, United Kingdom, NE3 3HD
Public contact	Newcastle Clinical Trials Unit, Newcastle University, 44 (0)191 2083820 ,
Scientific contact	Newcastle Clinical Trials Unit, Newcastle University, 44 (0)191 2083820 ,

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 May 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 November 2017
Global end of trial reached?	Yes
Global end of trial date	10 November 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To establish if treatment with blood thinning medications such as Aspirin and Ticagrelor in patients with a lung condition called chronic obstructive pulmonary disease (COPD) who are predicted to be at an increased risk of heart disease or heart attacks, will affect the function of the blood cells called platelets. This will be measured using a bedside Multiplate platelet function test.

Protection of trial subjects:

Follow-up of participants and 1, 3 and 6 months and collection of adverse events. A Trial Oversight Committee monitored efficacy and safety endpoints and had access to unblinded study data.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 120
Worldwide total number of subjects	120
EEA total number of subjects	120

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	43
From 65 to 84 years	74
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Start date (open to recruitment): 4th September 2015. First randomisation: 4th November 2015. Last randomisation: 4th May 2017. Last patient completed 6 month visit: 1st November 2017. End of trial: 10th November 2017

Pre-assignment

Screening details:

Participants eligible for screening into this study must have had a recorded clinical diagnosis of COPD as follows:

1. Abnormal spirometry with FEV1<80% and FEV1/FVC ratio <70% of predicted
2. Smoking history that is 10-pack years or greater (current or ex-smokers can be included)
3. Have capacity to consent.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

For purposes of blinding, placebo to match Brilique (Ticagrelor) and Aspirin tablets were manufactured.

Arms

Are arms mutually exclusive?	Yes
Arm title	Aspirin

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Aspirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One 75mg tablet once daily

Investigational medicinal product name	Placebo (Ticagrelor)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One tablet twice daily

Arm title	Ticagrelor
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Ticagrelor
Investigational medicinal product code	
Other name	Brilique
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:	
90mg twice daily	
Investigational medicinal product name	Placebo (Aspirin)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
One tablet daily	
Arm title	DAPT

Primary: Response in platelet function (ITT analysis set)

End point title	Response in platelet function (ITT analysis set) ^[1]
-----------------	---

End point description:

Inhibition of ASPI and adenosine diphosphate (ADP)-induced platelet aggregation at baseline, reported according to the 2x2 factorial comparative groups.

Note that response is ASPI response in the Aspirin and No Aspirin columns and ADP response in the Ticagrelor and No Ticagrelor columns.

Response is reported as a percentage with the 95% CI.

End point type	Primary
----------------	---------

End point timeframe:

Baseline

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This is a proof of concept study and the primary analysis is according to the Fleming A' Hern design. In the Aspirin group the number of responders (29) did not reach the critical threshold of 44 responders required to warrant further research. In the ticagrelor group, there were 24 ADP responders. This rate is lower than anticipated and did not reach the threshold to warrant further research.

End point values	Aspirin	No Aspirin	Ticagrelor	No Ticagrelor

Adverse events

Adverse events information

Timeframe for reporting adverse events:

1. All non-serious adverse reactions will be recorded at 6-month follow-up
2. Any serious adverse events will be recorded throughout the duration of the trial until 4 weeks after trial therapy is stopped

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 December 2015	A change to the recruitment strategy, allowing PICs to help identify potentially eligible patients for study participation, along with minor amendments to the protocol and updated investigators brochure.
23 June 2016	This amendment concerned changes to the protocol, PIS and ICF in relation to broadening the eligibility criteria. This resulted in the randomisation of all eligible patients to receive treatment with the IMP and / or placebo regardless of their QRISK2 scores, removing the observational arm of the study. In addition as a result of the removal of the observational arm, the recruitment target was reduced from 240 to 120 patients.
17 November 2016	Removal of the QRISK2 score as a stratifying variable. A change to the method of how SAEs will be reported to the funder. Extension of the originally planned end date from 01/12/2017 to 20/12/2018.
02 October 2017	This amendment was submitted in order to discontinue the 12 month follow-up, make administrative changes to the protocol, change the safety reporting, and inform of staffing changes.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
