

Clinical trial results:

A randomized, double-blind, placebo- and active controlled multicenter trial to demonstrate efficacy of subcutaneous secukinumab compared to placebo and etanercept (in a single-blinded arm) after twelve weeks of treatment, and to assess the safety, tolerability, and long-term efficacy in subjects from 6 to less than 18 years of age with severe chronic plaque psoriasis

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000380-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 March 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 March 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the superiority of secukinumab (low and high dose) in pediatric patients with severe chronic plaque psoriasis with respect to both PASI 75 and IGA mod 2011 0/1 response (co-primary endpoints) at Week 12, compared to placebo.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Estonia: 11
Country: Number of subjects enrolled	Latvia: 4
Country: Number of subjects enrolled	Spain: 8

EEA total number of subjects	100

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	37
Adolescents (12-17 years)	125
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in 57 investigative sites in 19 countries.

Pre-assignment

Screening details:

The screening period of up to 4 weeks was used to assess eligibility of the patients and to taper patients off prohibited medications.

Period 1

Period 1 title	Induction Period (Up to Week 12)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	AIN457 Low Dose (Induction Period)
------------------	------------------------------------

Arm description:

Patients received secukinumab 75mg (if weighing < 50kg) or 150 mg (if weighing ≥50 kg) at each dosing

Arm type	Experimental
Investigational medicinal product name	AIN457
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received secukinumab 75mg (if weighing < 50kg) or 150 mg (if weighing ≥50 kg) s.c. at each dosing.

Arm title	AIN457 High Dose (Induction Period)
------------------	-------------------------------------

Arm description:

Patients received secukinumab 75mg (if weighing < 25kg) or 150 mg (if weighing 25 to < 50kg) or 300 mg (if weighing ≥50 kg) at each dosing

Arm type	Experimental
Investigational medicinal product name	AIN457
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received secukinumab 75mg (if weighing < 25kg) or 150 mg (if weighing 25 to < 50kg) or 300 mg (if weighing ≥50 kg) s.c. at each dosing.

Arm title	Placebo (Induction Period)
------------------	----------------------------

Arm description:

Patients received matching placebo to secukinumab at each dosing

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received placebo s.c. at each dosing.

Arm title	Etanercept Comparator (Induction Period)
------------------	--

Arm description:

Patients received weekly open label etanercept 0.8 mg/kg of body weight (up to a maximum of 50 mg)

Arm type	Active comparator
Investigational medicinal product name	Etanercept Comparator
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients received weekly open label etanercept 0.8 mg/kg of body weight (up to a maximum of 50 mg).

Number of subjects in period 1	AIN457 Low Dose (Induction Period)	AIN457 High Dose (Induction Period)	Placebo (Induction Period)

Secondary: Number and Percentage of Participants achieving a 50%, 100% Improvement from baseline in PASI score at week 12

End point title	Number and Percentage of Participants achieving a 50%, 100% Improvement from baseline in PASI score at week 12
End point description:	
<p>Psoriasis Area and Severity Index (PASI): Combined assessment of lesion severity and affected area into a single score: 0 (no disease) to 72 (maximal disease). Body is divided into 4 areas for scoring (head, trunk, upper limbs and lower limbs); each area is scored by itself and scores are combined for final PASI. For each area, percent of skin involved is estimated: 0 (0%) to 6 (90-100%), and severity is estimated by clinical signs, Erythema, Thickening (plaque elevation, induration) & Scaling (desquamation). Scale 0 (none) to 4 (maximum). Final PASI = sum of severity parameters for each area * area score weight of section (head: 0.1, upper limbs: 0.2 trunk: 0.3 lower limbs: 0.4). Psoriasis Area and Severity Index (PASI) will be assessed/calculated as per standard procedure. PASI 50 represents the percentage (or number) of patients who have achieved a 50% or more reduction in their PASI score from baseline. PASI 100 indicates patients who have achieved a complete resolution of all disease.</p>

End point title	Percentage Change from Baseline in Children's Dermatology Life Quality Index (cDLQI) score Up to Week 12 (Induction)
-----------------	--

End point description:

The CDLQI measures functional disability of subjects with dermatological disorders who are less than 18 years of age and it has been utilized as a relevant clinical measure in atopic dermatitis, as well as other dermatitis clinical trials. The CDLQI is a simple, validated, self-administered 10-item questionnaire. The instrument contains six functional scales (i.e., symptoms and feeling, leisure, school or holidays, personal relationships, sleep and treatment). The questions are based on the preceding week to permit accurate recall. For the CDLQI, each question will be answered on a 4-point Likert scale scored from 0 to 3. Seven scores will be derived from the CDLQI: the total score of each of the six dimensions as well as the total score over all items. The higher the score, the more quality of life is impaired.

Secondary: Number and Percentage of participants with clinically important reduction in disability as evaluated by CHAQ questionnaire over time at Week 12

End point title	Number and Percentage of participants with clinically important
-----------------	---

End point description:

The CHAQ questionnaire is only done for children who in addition to psoriasis are also suffering from psoriatic arthritis. The questionnaire is completed by parent or legal guardian. It consists of multiple choice items concerning difficulty in performing eight common activities of daily living; dressing and grooming, arising, eating, walking, reaching, personal hygiene, gripping and other "activities". The person completing the questionnaire chooses from four response categories, ranging from 'without any difficulty' to 'unable to do'. Additionally two visual analog scales (overall well-being and pain of patient) must be performed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from first dose until end of study treatment plus 16 weeks post-treatment follow-up period. In total up to 252 weeks for AIN457 low and high dose, 28 weeks for Placebo and 68 weeks for Etanercept).

Adverse event reporting additional description:

Adverse Events are reported according to the actual treatment received at the onset of the AE.

-----------------------	---------------------

Reporting group description:

Includes patients from the AIN457 Low Dose and from the Placebo-AIN457 Low Dose groups. AEs were collected for up to 252 weeks.

Reporting group title	Any AIN457 high dose
-----------------------	----------------------

Reporting group description:

Includes patients from the AIN457 High Dose and from the Placebo-AIN457 High Dose groups. AEs were collected for up to 252 weeks.

Reporting group title	Etanercept
-----------------------	------------

Reporting group description:

Patients received weekly open label etanercept 0.8 mg/kg of body weight (up to a maximum of 50 mg). AEs were collected for up to 68 weeks.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Patients received matching placebo to secukinumab at each dosing. AEs were collected for up to 28 weeks (12 weeks if participant switched to AIN457 at week 12).

Reporting group title	Any AIN457 dose
-----------------------	-----------------

Reporting group description:

Any AIN457 dose

AEs were collected for up to 252 weeks.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 April 2015	The protocol was amended to provide more details and clarification on the duration of contraception requested during the study and to give option to align the duration on local label requirements.
10 February 2016	The protocol was amended to modify inclusion criterion 5 to align with the text agreed with the Pediatric Committee (PDCO) of the European Medicines Agency (EMA). Another key purpose of this Amendment, is to include the Childhood Health Assessment Questionnaire (CHAQ©) for those subjects with History of Psoriatic Arthritis. This addition is made following a request by the Japanese Health Authority. Further to that, some protocol text changes were undertaken following requests from IRBs.
16 April 2018	The protocol was amended to include an additional Interim Analysis prior to the Week 24 analysis once sufficient safety and pharmacokinetic data have been collected. This analysis aligned with the efficacy extrapolation principle, is expected to provide the basis for a submission package to health authorities (HA), with the intent to allow earlier availability of secukinumab to pediatric patients in countries which accept a submission of clinical data with use of extrapolation methodology. This analysis may be performed before all subjects have reached the primary endpoint. In addition to that, some clarifications, as well as editorial changes were undertaken in the protocol.
18 September 2020	The protocol was amended to introduce a level of flexibility in drug dispensation, protocol assessments and visit schedule if a major health care event like COVID-19 requires it, thus allowing patients to remain in the trial and continue treatment while being monitored for safety. In addition, renal and liver monitoring procedures will no longer be followed for subjects who reach adulthood (≥ 18 years).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
