

Clinical trial results:

A Phase III, Randomized, Double-Blind, Active Comparator-Controlled Clinical Trial to Estimate the Efficacy and Safety of Imipenem/Cilastatin/Relebactam (MK-7655A) Versus Colistimethate Sodium + Imipenem/Cilastatin in Subjects with Imipenem-Resistant Bacterial Infection

Summary

EudraCT number	2015-000066-62
Trial protocol	DE EE LV RO LT GR IT Outside EU/EEA
Global end of trial date	18 September 2017

Results information

Result version number	v1 (current)
This version publication date	22 September 2018
First version publication date	22 September 2018

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001809-PIP01-15
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 September 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 September 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The study will evaluate the efficacy and safety of imipenem+cilastatin/relebactam (MK-7655A) versus colistimethate sodium+imipenem+cilastatin in the treatment of imipenem-resistant bacterial infections. Infections evaluated in the study will be hospital-acquired bacterial pneumonia (HABP), ventilator-associated bacterial pneumonia (VABP), complicated intra-abdominal infection (cIAI), and complicated urinary tract infection (cUTI).

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 5
Country: Number of subjects enrolled	Colombia: 1
Country: Number of subjects enrolled	Estonia: 2
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	Lithuania: 2
Country: Number of subjects enrolled	Mexico: 1
Country: Number of subjects enrolled	Peru: 1
Country: Number of subjects enrolled	Romania: 1
Country: Number of subjects enrolled	Turkey: 8
Country: Number of subjects enrolled	Ukraine: 19
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	50
EEA total number of subjects	13

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	28
From 65 to 84 years	22
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 35 study centers in 17 countries.

Pre-assignment

Screening details:

Adult participants with hospital-acquired bacterial pneumonia (HABP), ventilator-associated bacterial pneumonia (VABP), complicated intra-abdominal infection (cIAI), or complicated urinary tract infection (cUTI) were recruited.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Group 1: Imipenem+Cilastatin/Relebactam

Arm description:

Participants with HABP, VABP, cIAI, or cUTI caused by imipenem-nonsusceptible but imipenem/relebactam- and colistin-susceptible pathogens were randomized to receive imipenem+cilastatin/relebactam IV infusion once every 6 hours and placebo for colistimethate sodium IV infusion once every 12 hours for 5 to 21 days (cIAI and cUTI) or for 7 to 21 days (HABP or VABP).

Arm type	Experimental
Investigational medicinal product name	Imipenem+Cilastatin/Relebactam
Investigational medicinal product code	
Other name	MK-7655A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Imipenem+Cilastatin/Relebactam 200/100 mg to 500/250 mg, depending on renal function, IV infusion once every 6 hours

Investigational medicinal product name	Placebo to Colistimethate sodium (CMS)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo to CMS IV infusion once every 12 hours

Arm title	Group 2: Colistimethate sodium + Imipenem+Cilastatin
------------------	--

Arm description:

Participants with HABP, VABP, cIAI, or cUTI caused by imipenem-nonsusceptible but imipenem/relebactam- and colistin-susceptible pathogens were randomized to receive colistimethate sodium IV infusion once every 12 hours and imipenem+cilastatin IV infusion once every 6 hours for 5 to 21 days (cIAI and cUTI) or for 7 to 21 days (HABP or VABP).

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	CMS
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Colistimethate base activity 300 mg (~720 mg CMS or ~9 million IU) IV infusion loading dose, followed by colistimethate base activity 75 mg to 150 mg (~180 to 360 mg CMS), depending on renal function, once every 12 hours

Investigational medicinal product name	Imipenem+Cilastatin/Relebactam
Investigational medicinal product code	
Other name	MK-7655A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Imipenem+Cilastatin/Relebactam 200/100 mg to 500/250 mg, depending on renal function, IV infusion once every 6 hours

Arm title	Group 3: Open-Label Imipenem+Cilastatin/Relebactam
------------------	--

Arm description:

Participants with HABP, VABP, cIAI, or cUTI caused by imipenem- and colistin-nonsusceptible pathogens received open-label imipenem+cilastatin/relebactam IV infusion once every 6 hours for 5 to 21 days (cIAI and cUTI) or for 7 to 21 days (HABP or VABP).

Arm type	Experimental
Investigational medicinal product name	Imipenem+Cilastatin/Relebactam
Investigational medicinal product code	
Other name	MK-7655A
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Imipenem+Cilastatin/Relebactam 200/100 mg to 500/250 mg, depending on renal function, IV infusion once every 6 hours

Number of subjects in period 1	Group 1: Imipenem+Cilastatin/Relebactam	Group 2: Colistimethate sodium + Imipenem+Cilastatin	Group 3: Open-Label Imipenem+Cilastatin/Relebactam
Started	31	16	3
Completed	27	11	1
Not completed	4	5	2
Consent withdrawn by subject	1	-	-
Physician decision	1	-	-
Adverse event, non-fatal	-	1	1
Death	1	3	1
Lost to follow-up	1	1	-

Primary: Percentage of Participants with Favorable Overall Response (FOR)

End point title	Percentage of Participants with Favorable Overall Response (FOR)
End point description:	
FOR criteria was based on clinically relevant outcomes for the primary infection site as follows: HABP/VABP: survival through Day 28; cIAI: favorable clinical response (all pretherapy symptoms of index infection resolved with no evidence of resurgence, no additional antibiotic therapy required, and no unplanned surgical or percutaneous drainage procedures) at Day 28; cUTI: favorable composite clinical response (all pretherapy symptoms of index infection resolved with no evidence of resurgence, no additional antibiotic therapy required) and microbiological response (urine culture shows sustained eradication of the baseline uropathogen [e.g., $\geq 10^5$ CFU/mL at study entry is reduced to $<10^4$ CFU/mL]) at Early Follow-up (EFU). Participants in Groups 1 and 2 who received ≥ 1 dose of each trial drug within an IV regimen, and had a baseline bacterial pathogen meeting inclusion criteria, are included. Per protocol, data from Group 3 was considered exploratory and not included in the analysis.

Secondary: Percentage of Participants with ≥1 Events of Treatment-Emergent Nephrotoxicity

End point title	Percentage of Participants with ≥1 Events of Treatment-Emergent Nephrotoxicity
-----------------	--

End point description:

Treatment-emergent nephrotoxicity was assessed in Groups 1 and 2 as indicated by the protocol (Group 3 was not included). Nephrotoxicity for participants with normal baseline serum creatinine levels (<1.2 mg/dL) was defined as "doubling of serum creatinine to >1.2 mg/dL or reduction in creatinine clearance (CICR) of ≥50%". Nephrotoxicity for participants with pre-existing renal dysfunction (baseline serum creatinine level ≥1.2 mg/dL) was defined as "increase in serum creatinine by ≥1 mg/dL or reduction from baseline CICR of ≥20% or need for renal replacement therapy (RRT)". All participants in Groups 1 and 2 who received ≥1 dose of study drug are included. Per protocol, Group 3 was not included in the nephrotoxicity analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 December 2016	Amendment (AM)1: The primary purpose of AM1 was to allow for a potential increase in enrollment.
08 May 2017	AM2: The primary purpose of AM2 was to allow for treatment durations longer than 21 days based on sponsor approval.
11 September 2017	AM3: The primary purposes of Amendment 03 were to add details to the statistical analysis plan for calculation of 90% confidence intervals for between-group differences for the primary and key secondary efficacy endpoints.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
