

Clinical trial results:

A multi-center, randomized, double-blind, placebo controlled, parallel group study to preliminarily evaluate the safety, tolerability, pharmacokinetics and efficacy of CFZ533 in patients with moderate to severe myasthenia gravis

Summary

EudraCT number	2015-000097-35
Trial protocol	DE DK
Global end of trial date	19 December 2017

Results information

Result version number	v1 (current)
This version publication date	28 December 2018
First version publication date	28 December 2018

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 December 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 December 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective for the trial were :

- to evaluate the safety and tolerability of intravenous (IV) CFZ533 as an add-on therapy to standard of care in patients with moderate to severe MG throughout the study,
- and to evaluate the efficacy of IV CFZ533 as an add-on therapy to standard of care in patients with moderate to severe MG

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 4
Country: Number of subjects enrolled	Denmark: 7
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Russian Federation: 24
Country: Number of subjects enrolled	Taiwan: 7
Worldwide total number of subjects	44
EEA total number of subjects	9

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	40
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 44 patients were randomized to receive either IV CFZ533 or IV placebo, of which 34 patients (77%) completed the study.

Pre-assignment

Screening details:

Safety analysis set, and Full analysis: 44 patients (22 treated with CFZ533 and 22 with placebo)

PK analysis set : 20 patients treated with CFZ533

PD analysis set: 42 patients (20 treated with CFZ533 and 20 with placebo)

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	CFZ533

Arm description:

CFZ533 10 mg/kg

Arm type	Experimental
Investigational medicinal product name	CFZ533
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

CFZ533 was provided as lyophilisate in vial (150 mg).

CFZ533 was administered as a 10 mg/kg IV infusion given over 2 hours, every 28 days (q4w), for a treatment duration of 24 weeks (six doses).

Arm title	Placebo
------------------	---------

Arm description:

Placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The CFZ533 matching placebo was provided as liquid in vials, and was administered as IV infusion over 2 hours, every 28 days (q4w), for a treatment duration of 24 weeks (six doses).

Number of subjects in period 1	CFZ533	Placebo
Started	22	22
Completed	17	17
Not completed	5	5
Adverse event, serious fatal	-	2
Adverse event, non-fatal	1	-

Reporting group title	CFZ533
Reporting group description: CFZ533 10 mg/kg	
Reporting group title	Placebo
Reporting group description: Placebo	

Primary: Mean change from baseline in the Quantitative Myasthenia Gravis (QMG) score at week 25. Posterior Median was used as measure type.

End point title	Mean change from baseline in the Quantitative Myasthenia Gravis (QMG) score at week 25. Posterior Median was used as measure type.
End point description: The QMG score is an established and validated measure of disease severity used in MG trials (Jaretzki et al 2000). This scoring system is based on quantitative testing of sentinel muscle groups by means of a 4 point scale ranging from 0 (no symptoms) to 3 (severe symptoms). The scale measures ocular, bulbar, respiratory, and limb function, grading each finding, and the total score ranges from 0 (no myasthenic findings) to 39 (maximal myasthenic deficits). Its reliability and longitudinal validity have been demonstrated in several studies (Sharshar et al 2000, Bedlack et al 2005).	
End point type	Primary

median (confidence interval 90%)	-4.07 (-5.67 to -2.47)	-2.93 (-4.53 to -1.33)		

Statistical analyses

Statistical analysis title	Analysis primary objective
Statistical analysis description: The changes from baseline in QMG scores at Week 25 were analyzed using a Bayesian model that investigated effects for CFZ533 or placebo and baseline QMG score. The prior of the difference in changes from baseline between CFZ533 and placebo at week 25 was used to obtain the posterior estimates. Bayesian posterior probabilities at Week 25 were ≥ 0 or ≥ 3 points. A difference of 3 points on the mean change in QMG score was deemed clinically meaningful.	
Comparison groups	Placebo v CFZ533

Secondary: Mean changes from baseline in the Myasthenia Gravis Composite (MGC) score. Posterior Median was used as measure type.

End point title	Mean changes from baseline in the Myasthenia Gravis Composite (MGC) score. Posterior Median was used as measure type.
-----------------	---

End point description:

The MGC score is another key efficacy outcome measure. It is reliable and demonstrates concurrent and longitudinal construct validity in the MG practice care setting (Burns et al 2010). The MGC scale covers 10 important functional domains most frequently involved in patients with MG. The proportion of bulbar and respiratory items reflect the clinical importance of these domains in the disease, and are appropriately weighted. The assessment of each of the 10 test items provides immediate insight into the status of that particular functional domain.

Statistical analyses

No statistical analyses for this end point

Secondary: Free CD40 on B cells

End point title	Free CD40 on B cells
End point description: CD40 receptor occupancy by CFZ533 in peripheral blood was assessed by flow cytometry analysis, measuring free or total CD40 receptors on whole blood B cells. Free CD40 on CD19-positive B cells, using PE-conjugated CFZ533 whose binding was prevented by bound, unconjugated CFZ533 (drug bound to CD40 on peripheral blood B cells). The more CD40 was occupied by unlabeled CFZ533, the less binding of labeled CFZ533, manifest as a lower mean fluorescence intensity (MFI) of CD40 on B cells. MFI from free CD40 on B cells was converted into Molecules of Equivalent Soluble Fluorochrome (MESF) using PE-MESF beads.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 April 2015	The purpose of this amendment was to incorporate a second screening visit (Visit 2) to allow safety laboratory results to be available prior to randomization at Day 1. Moreover, some inclusion/exclusion criteria were modified, in consultation with the investigators, to simplify recruitment.
29 July 2015	The purpose of this amendment was to incorporate requests following Health Authority and Ethic Committee review. Suggestions following investigators feedback were also implemented. Given the limited clinical safety data available to date, an independent DMC was instituted to routinely monitor the safety data as requested after Health Authority Review. The manual randomization process was replaced by using a validated Interactive response technology system for patient randomization.
19 May 2016	The purpose of this amendment was to make the optional autoantibodies (anti-AChR and anti-MuSK) diagnostic test at screening visit mandatory for all patients as an inclusion criterion to confirm eligibility. This assessment was already foreseen at screening, only in case of absence of AChR or MuSK autoantibodies with a positive medical history of MG. To allow consistency in all patients for AChR or MuSK autoantibodies assessment and a positive diagnosis of MG, the assessment was made mandatory at visit 1.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
