**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 April 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 April 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This study aims to compare treatment with a fixed-dose combination (FDC) of imipenem/relebactam/cilastatin (IMI/REL) with a FDC of piperacillin/tazobactam (PIP/TAZ) in participants with hospital-acquired or ventilator-associated bacterial pneumonia (HABP or VAPB, respectively). The primary hypothesis is that IMI/REL is non-inferior to PIP/TAZ in the percentage of participants with a favorable clinical response.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 November 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 5
Country: Number of subjects enrolled	Brazil: 44
Country: Number of subjects enrolled	Bulgaria: 21
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Colombia: 21
Country: Number of subjects enrolled	Croatia: 1
Country: Number of subjects enrolled	Czech Republic: 2
Country: Number of subjects enrolled	Estonia: 12
Country: Number of subjects enrolled	France: 34
Country: Number of subjects enrolled	Georgia: 18
Country: Number of subjects enrolled	Guatemala: 5
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Japan: 43
Country: Number of subjects enrolled	Korea, Republic of: 7
Country: Number of subjects enrolled	Latvia: 3
Country: Number of subjects enrolled	Lithuania: 7
Country: Number of subjects enrolled	Mexico: 34
Country: Number of subjects enrolled	Norway: 6

Country: Number of subjects enrolled	Philippines: 27
Country: Number of subjects enrolled	Portugal: 3
Country: Number of subjects enrolled	Romania: 30
Country: Number of subjects enrolled	Russian Federation: 35
Country: Number of subjects enrolled	Serbia: 7
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	Turkey: 13
Country: Number of subjects enrolled	Ukraine: 128
Country: Number of subjects enrolled	United States: 21
Worldwide total number of subjects	537
EEA total number of subjects	128

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	306
From 65 to 84 years	198
85 years and over	33

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Adult male and female participants requiring intravenous (IV) therapy for hospital-acquired bacterial pneumonia (HABP) or ventilator-assisted bacterial pneumonia (VABP) were screened for inclusion.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	IMI/REL

Arm description:

Participants received imipenem 500 mg + relebactam 250 mg + cilastatin 500 mg as a FDC administered IV every 6 hours for a minimum of 7 days, up to 14 days. At the start of IMI/REL treatment, participants were treated empirically with 600 mg open-label linezolid administered IV every 12 hours until methicillin-resistant *Staphylococcus aureus* (MRSA) was ruled out. Participants with confirmed MRSA infection continued to receive 600 mg linezolid every 12 hours for a minimum of 7 days, up to 14 days total.

Arm type	Experimental
Investigational medicinal product name	Imipenem
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Imipenem 500 mg as part of a FDC administered by IV every 6 hours for a minimum of 7 days, up to 14 days.

Investigational medicinal product name	Relebactam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Relebactam 250 mg as part of a FDC administered by IV every 6 hours for a minimum of 7 days, up to 14 days.

Investigational medicinal product name	Cilastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Cilastatin 500 mg as part of a FDC administered by IV every 6 hours for a minimum of 7 days, up to 14 days.

Investigational medicinal product name	Linezolid
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Linezolid 600 mg administered open-label by IV every 12 hours for up to 14 days.

<b>Arm title</b>	PIP/TAZ
------------------	---------

Arm description:

Participants received piperacillin 4000 mg + tazobactam 500 mg as a FDC administered IV every 6 hours for a minimum of 7 days, up to 14 days. At the start of PIP/TAZ treatment, participants were treated empirically with 600 mg open-label linezolid administered IV every 12 hours until MRSA was ruled out. Participants with confirmed MRSA infection continued to receive 600 mg linezolid every 12 hours for a minimum of 7 days, up to 14 days total.

Arm type	Active comparator
Investigational medicinal product name	Piperacillin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Piperacillin 4000 mg as part of a FDC administered by IV every 6 hours for a minimum of 7 days, up to 14 days.

Investigational medicinal product name	Tazobactam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Tazobactam 500 mg as part of a FDC administered by IV every 6 hours for a minimum of 7 days, up to 14 days.

Investigational medicinal product name	Linezolid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Linezolid 600 mg administered open-label by IV every 12 hours for up to 14 days.

<b>Number of subjects in period 1</b>	IMI/REL	PIP/TAZ
Started	268	269
Completed	185	187
Not completed	83	82
Participant moved	17	5
Withdrawal parent/guardian	-	1
Physician decision	1	1
Consent withdrawn by subject	11	7
Death	44	58
Adverse event	2	2

<b>Statistical analysis title</b>	Adjusted difference in favorable clinical response
Comparison groups	IMI/REL v PIP/TAZ
Number of subjects included in analysis	241
Analysis specification	Pre-specified
Analysis type	
Parameter estimate	Adjusted difference in FCR
Point estimate	-3.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-14.3
upper limit	7.5

### Secondary: Percentage of participants in the CE population with a FCR at EFU visit

End point title	Percentage of participants in the CE population with a FCR at EFU visit
-----------------	---

#### End point description:

The percentage of participants with a FCR at EFU was determined for each arm. Favorable clinical response at EFU was defined as either "sustained cure" (all pre-therapy signs and symptoms of the index infection have resolved [or returned to "pre-infection status"] with no evidence of resurgence and no additional antibiotics are required) or "cure" (all pre-therapy signs and symptoms of the index infection have resolved [or returned to "pre-infection status"] and no additional antibiotics are required). The CE population is all randomized participants with  $\geq 1$  dose of study therapy; had not only gram-positive cocci on baseline Gram stain; met important entry criteria; had no protocol deviations; received minimum duration of IV therapy; and have EFU clinical response data.

End point type	Secondary
End point timeframe:	
Up to 16 days after end of therapy (up to Day 30)	

End point values	IMI/REL	PIP/TAZ		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	147	144		
Units: Percentage of participants				
number (not applicable)	74.3	79.4

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 30 days

Adverse event reporting additional description:

An AE is defined as any untoward medical occurrence in a participant administered a pharmaceutical product and which does not necessarily have to have a causal relationship with this treatment. All randomized participants who received  $\geq 1$  dose of intravenous (IV) study therapy are included in the analysis.

Assessment type	Systematic

### Reporting groups

Reporting group title	PIP/TAZ
-----------------------	---------

Reporting group description:

Participants received piperacillin 4000 mg + tazobactam 500 mg as a FDC administered IV every 6 hours for a minimum of 7 days, up to 14 days. At the start of PIP/TAZ treatment, participants were treated empirically with 600 mg open-label linezolid administered IV every 12 hours until MRSA was ruled out. Participants with confirmed MRSA infection continued to receive 600 mg linezolid every 12 hours for a minimum of 7 days, up to 14 days total.

Reporting group title	IMI/REL
-----------------------	---------

Reporting group description:

Participants received imipenem 500 mg + relebactam 250 mg + cilastatin 500 mg as a FDC administered IV every 6 hours for a minimum of 7 days, up to 14 days. At the start of PIP/TAZ treatment, participants were treated empirically with 600 mg open-label linezolid administered IV every 12 hours until MRSA was ruled out. Participants with confirmed MRSA infection continued to receive 600 mg linezolid every 12 hours for a minimum of 7 days, up to 14 days total.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 June 2015	AM01: The primary purpose of the amendment was to modify inclusion/exclusion criteria.
22 April 2016	AM02: The primary purposes of the amendment were to modify inclusion/exclusion criteria.
23 August 2018	AM04: The primary purpose of the amendment was to modify microbiological response criteria.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
