Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 January 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 January 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the safety and efficacy of a CAT regimen with aztreonam for inhalation solution (AZLI) and tobramycin inhalation solution (TIS) in adult and pediatric subjects with cystic fibrosis (CF) and pulmonary *Pseudomonas aeruginosa* (PA) infection. Participants were enrolled in a 28 day TIS run-in phase, and were eligible for randomization in the comparative phase if they had not received non-study oral antibiotics for a respiratory event or IV or inhaled antibiotics for any indication between Visits 2 and 3, had not developed a condition requiring hospitalization or other change in clinical status which, in the opinion of the investigator would preclude their ability to continue in the study, and had demonstrated at least 50% TIS compliance. Participants enrolled in the comparative phase were randomized to receive 3 cycles of treatment, each cycle consisting alternating regimens: AZLI or placebo for 28 days followed by TIS for 28 days.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	6
Adolescents (12-17 years)	13
Adults (18-64 years)	87
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in the United States. The first participant was screened on 13 December 2012. The last study visit occurred on 15 January 2015.

Pre-assignment

Screening details:

Following enrollment, participants received tobramycin inhalation solution (TIS) in the TIS Run-In Phase, and if still eligible were randomized 1 to 1 to receive aztreonam for inhalation solution (AZLI) or placebo to match AZLI alternating with TIS in the Comparative Phase.

Period 1

Period 1 title	TIS Run-In Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	TIS Run-In Treatment Group
-----------	----------------------------

Arm description:

Enrolled participants received 28 days of TIS during the run-in phase.

Arm type	Standard of care
Investigational medicinal product name	Tobramycin inhalation solution
Investigational medicinal product code	
Other name	TIS, TOBI®
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

TIS 300 mg 2 times daily using a PARI® LC Plus nebulizer and DeVilbiss Pulmo-Aide® air compressor

Number of subjects in period 1	TIS Run-In Treatment Group
Started	107
Completed	93
Not completed	14
Adverse event, non-fatal	3
Protocol-specified criteria for withdrawal	9
Noncompliance with study drug	1
Withdrew consent	1

Period 2

Period 2 title	Comparative Phase
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	AZLI

Arm description:

Participants were randomized to receive 3 cycles of treatment, each cycle consisting alternating regimens: AZLI for 28 days followed by TIS for 28 days.

Arm type	Experimental
Investigational medicinal product name	Aztreonam for inhalation solution
Investigational medicinal product code	
Other name	AZLI, Cayston®
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

AZLI 75 mg 3 times daily combined with diluent administered using an eFlow nebulizer

Investigational medicinal product name	Tobramycin inhalation solution
Investigational medicinal product code	
Other name	TIS, TOBI®
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

TIS 300 mg 2 times daily using a PARI® LC Plus nebulizer and DeVilbiss Pulmo-Aide® air compressor

Arm title	Placebo
------------------	---------

Arm description:

Participants were randomized to receive 3 cycles of treatment, each cycle consisting alternating regimens: placebo to match AZLI for 28 days followed by TIS for 28 days.

Arm type	Active comparator
Investigational medicinal product name	Placebo to match AZLI
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Placebo to match AZLI 3 times daily combined with diluent administered using an eFlow nebulizer

Investigational medicinal product name	Tobramycin inhalation solution
Investigational medicinal product code	
Other name	TIS, TOBI®
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

TIS 300 mg 2 times daily using a PARI® LC Plus nebulizer and DeVilbiss Pulmo-Aide® air compressor

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: The TIS Run-In Phase (Period 1) was a period to determine eligibility in the randomized comparative phase (Period 2). The comparative phase was the primary phase of the study and the baseline period.

Number of subjects in period 2[2][3]	AZLI	Placebo
Started	43	47
Completed	37	37
Not completed	6	10
Adverse event, serious fatal	1	-
Protocol-specified criteria for withdrawal	1	1
Pregnancy	-	1
Noncompliance with study drug	1	-
Withdrew consent	3	7
Investigator's discretion	-	1

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 107 participants were enrolled (worldwide) and entered the TIS Run-In Phase. 17 participants were not eligible to enter the comparative phase (baseline period).

[3] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 17 participants enrolled in the TIS Run-In Phase were not eligible to enter the comparative phase.

Baseline characteristics

Reporting groups

Reporting group title	AZLI
Reporting group description:	
Participants were randomized to receive 3 cycles of treatment, each cycle consisting alternating regimens: AZLI for 28 days followed by TIS for 28 days.	
Reporting group title	Placebo
Reporting group description:	
Participants were randomized to receive 3 cycles of treatment, each cycle consisting alternating regimens: placebo to match AZLI for 28 days followed by TIS for 28 days.	

Reporting group values	AZLI	Placebo	Total
Number of subjects	43	47	90
Age categorical			
Units: Subjects			
6 - 12 years	3	1	4
13 - 17 years	5	6	11
≥ 18 years	35	40	75
Age continuous			
Units: years			
arithmetic mean	28.8	28	
standard deviation	± 12.1	± 10.88	-
Gender categorical

Not Hispanic or Latino	38	43	81
FEV1 % predicted at Day 1			
FEV1 is defined as the maximal volume of air that can be exhaled in 1 second. FEV1 % predicted is defined as FEV1 of the participant divided by the average FEV1 in the population for any person of similar age, sex, race, and body composition.			
Units: percentage of FEV1 % predicted			
arithmetic mean	49.95	50.25	
standard deviation	± 17.5	± 15.131	-
CFQ-R Respiratory Score at Day 1			
Respiratory symptoms (eg, coughing, congestion, wheezing) were assessed with the Cystic Fibrosis Questionnaire - Revised (CFQ-R) Respiratory Symptoms Scale (RSS). The range of scores (units) was 0 to 100 with higher scores indicating fewer symptoms.			
Units: units on a scale			
arithmetic mean	59.72	64.24	
standard deviation	± 18.408	± 15.044	-

Metabolism and nutrition disorders Decreased appetite subjects affected / exposed occurrences (all)	0 / 107 (0.00%) 0	16 / 46 (34.78%) 21	5 / 42 (11.90%) 5

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 June 2012	Use of the Cystic Fibrosis Respiratory Symptom Diary (CFRSD) was added; clarification that participants who experienced a protocol-defined exacerbation (PDE) after Visit 3 and took antibiotics were expected to remain on study; the definition of PDE was clarified as a change or worsening from baseline of 1 or more documented signs or symptoms (decreased exercise tolerance, increased cough, increased sputum or chest congestion, decreased appetite, or other signs or symptoms) associated with the use of nonstudy antibiotics, and had to be verified by a blinded independent adjudication committee; the study duration was increased from 24 weeks to 28 weeks to include the 4-week TIS run-in phase.
08 August 2012	The primary endpoint definition was clarified by adding 'IV or inhaled' to nonstudy antibiotic use throughout protocol document; Sample Cystic Fibrosis Questionnaire-Revised (CFQ-R) and European Questionnaire-5 Dimensions (EQ-5D) were added.
21 March 2013	Throat swab cultures were allowed to document history of PA infection.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

There were no limitations affecting the analysis or results.

Notes:
