

Clinical trial results:

Influence of liraglutide on diastolic cardiac function and myocardial perfusion as determined by magnetic resonance imaging in patients with type 2 diabetes: a double-blind randomized parallel-group trial

Summary

EudraCT number	2015-000410-22
Trial protocol	DK
Global end of trial date	31 December 2019

Results information

Result version number	v1 (current)
This version publication date	23 April 2021
First version publication date	23 April 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 March 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 December 2019
Global end of trial reached?	Yes
Global end of trial date	31 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial is to test if 18 weeks of treatment with liraglutide (up to 1.8 mg s.c. once daily) improves (or worsens) diastolic performance in T2DM patients with diastolic dysfunction, compared to placebo.

Protection of trial subjects:

Overall we aimed at minimizing the trial subjects pain and distress as much as possible

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 February 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 40
Worldwide total number of subjects	40
EEA total number of subjects	40

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	17
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited from the Department of Endocrinology and Cardiology at NSR Hospital in Denmark between May 2016 and August 2019. Patients with type 2 diabetes were identified in the endocrinology or cardiology outpatient clinic by a nurse or a physician responsible for their treatment.

Pre-assignment

Screening details:

372 patients were invited to participate either by letter or in person. After written patient information about the study and information about patient's rights, and if they expressed interest in participating in the study, pre-screening interviews by telephone were conducted. Forty-two eligible patients were invited to the first in-person screenin

Period 1

Period 1 title	Intervention(overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Liraglutide

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Victoza
Investigational medicinal product code	EU/1/09/529/001-005
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection of 1.8 mg/per day

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	placebo

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

MPRI was only analysable in 16 patients

Notes:
