Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 May 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 May 2016
Global end of trial reached?	Yes
Global end of trial date	16 May 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this double-blind crossover study is to assess the effect of single doses of 50 mg and 300 mg gefapixant (AF-219/MK-7264) on cough reflex sensitivity to capsaicin in both healthy participants and participants with chronic cough. This study will also assess the effect of single doses of gefapixant on cough reflex sensitivity to adenosine triphosphate (ATP) in healthy participants and participants with chronic cough.

Protection of trial subjects:

The Investigators agreed to conduct the study in compliance with the study Protocol, with the International Standard of Good Clinical Practice (GCP) procedures, with all applicable local GCP standards and regulations, and with the principles of the Declaration of Helsinki (1964) and relevant amendments.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 April 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 50
Worldwide total number of subjects	50
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	42
From 65 to 84 years	8

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The main purpose of the 14-day Screening period (Day -14 to Day -1) was to ensure that each participant met all the specified eligibility criteria. In addition, cough sensitivity was measured at Screening by standard clinical methodology using cough challenge in response to capsaicin.

Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: PBOGefapixant 300 mgPBOGefapixant 300 mg/Healthy

Arm description:

Healthy participants in Cohort 1/Sequence A received single doses of placebo (PBO) on Day 1 of Periods 1 and 3 and single doses of gefapixant 300 mg on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Placebo (PBO)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant matching placebo, administered as a single oral dose

Arm title	Cohort 1: Gefapixant 300 mgPBOGefapixant 300 mgPBO/Healthy
------------------	--

Arm description:

Healthy participants in Cohort 1/Sequence B received single doses of gefapixant 300 mg on Day 1 of Periods 1 and 3 and single doses of placebo on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Gefapixant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant 300 mg, administered as a single oral dose

Arm title	Cohort 1: PBOGefapixant 300 mgPBOGefapixant 300 mg/CC
------------------	---

Arm description:

Participants with chronic cough (CC) in Cohort 1/Sequence A received single doses of placebo on Day 1 of Periods 1 and 3 and single doses of gefapixant 300 mg on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between

treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant matching placebo, administered as a single oral dose

Arm title	Cohort 1: Gefapixant 300 mgPBOGefapixant 300 mgPBO/CC
------------------	---

Arm description:

Participants with chronic cough in Cohort 1/Sequence B received singles doses of gefapixant 300 mg on Day 1 of Periods 1 and 3 and single doses of placebo on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Gefapixant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant 300 mg, administered as a single oral dose

Arm title	Cohort 2: PBOGefapixant 50 mgPBOGefapixant 50 mg/Healthy
------------------	--

Arm description:

Healthy participants in Cohort 2/Sequence A received singles doses of placebo on Day 1 of Periods 1 and 3 and single doses of gefapixant 50 mg on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant matching placebo, administered as a single oral dose

Arm title	Cohort 2: Gefapixant 50 mgPBOGefapixant 50 mgPBO/Healthy
------------------	--

Arm description:

Healthy participants in Cohort 2/Sequence B received single doses of gefapixant 50 mg on Day 1 of Periods 1 and 3 and single doses of placebo on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Gefapixant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant 50 mg, administered as a single oral dose

Arm title	Cohort 2: PBOGefapixant 50 mgPBOGefapixant 50 mg/CC
------------------	---

Arm description:

Participants with chronic cough in Cohort 2/Sequence A received singles doses of placebo on Day of Periods 1 and 3 and singles doses of gefapixant 50 mg on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Gefapixant matching placebo, administered as a single oral dose

Arm title	Cohort 2: Gefapixant 50 mgPBOGefapixant 50 mgPBO/CC
------------------	---

------------------	---

Arm description:

Participants with chronic cough in Cohort 2/Sequence A received singles doses of placebo on Day of Periods 1 and 3 and singles doses of gefapixant 50 mg on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Gefapixant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Gefapixant 50 mg, administered as a single oral dose	
Arm title	Cohort 2: Gefapixant 50 mgPBOGefapixant 50 mgPBO/CC

Arm description:

Participants with chronic cough in Cohort 2/Sequence B received singles doses of gefapixant 50 mg on Day 1 of Periods 1 and 3 and singles doses of placebo on Day 1 of Periods 2 and 4. (Each treatment period consisted of Day 1 and Day 2.) There was a minimum 48-hour washout period between treatment periods.

Arm type	Experimental or placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Gefapixant matching placebo, administered as a single oral dose

Primary: Cough Reflex Sensitivity to Capsaicin Measured by Maximal Cough Response (Emax)

End point title	Cough Reflex Sensitivity to Capsaicin Measured by Maximal Cough Response (Emax)
-----------------	---

End point description:

The effect of single doses of 50 mg and 300 mg gefapixant on cough reflex sensitivity to challenge with capsaicin was assessed. Capsaicin-evoked cough challenge was performed 2 hours post-dose in Periods 1 and 2. For capsaicin challenge, doubling concentrations from 0.49 µM to 1000 µM were prepared by dilution of stock solutions with saline, and were administered by inhalation. The number of explosive cough sounds occurring within the first 15 seconds after inhalation were recorded. Nonlinear mixed-effects modeling was used to estimate the Emax. Population pharmacodynamic modeling was performed in NONMEM 7.3. Data exploration, goodness-of-fit plots, statistical analyses, and simulations were performed in Matlab R2015a. Note: All values presented are model-based. The analysis population included all randomized participants who received at least 1 dose of study medication and had at least 1 post-dose primary endpoint assessment of Emax in response to capsaicin challenge.

End point title	Daytime Cough Frequency in Participants With Chronic Cough Who Underwent Capsaicin Challenge
-----------------	--

End point description:

Daily cough frequency monitoring was performed in participants with chronic cough, who were attached to a digital sound recorder with 2 microphones (a lapel air microphone attached to the participant's clothing and an adhesive chest wall microphone attached to the skin at the top of the sternum). Participants wore the sound recorder from the start of capsaicin challenge to bedtime on Day 1 in Periods 1 and 2. The resulting recording was processed by software which cut out the majority of speech and background noise but retained cough sounds. The investigator listened to the recording and documented the number of coughs per hour. The analysis population for this endpoint included all randomized participants with chronic cough who received at least 1 dose of study medication and had at least 1 post-dose secondary endpoint assessment of daytime cough frequency in response to capsaicin challenge.

Secondary: Daytime Cough Frequency in Participants With Chronic Cough Who Underwent ATP Challenge

End point title	Daytime Cough Frequency in Participants With Chronic Cough Who Underwent ATP Challenge
-----------------	--

End point description:

Daily cough frequency monitoring was performed in participants with chronic cough, who were attached to a digital sound recorder with 2 microphones (a lapel air microphone attached to the participant's clothing and an adhesive chest wall microphone attached to the skin at the top of the sternum). Participants wore the sound recorder from the start of ATP challenge to bedtime on Day 1 in Periods 3 and 4. The resulting recording was processed by software which cut out the majority of speech and background noise but retained cough sounds. The investigator listened to the recording and documented the number of coughs per hour. The analysis population for this endpoint included all treated participants with chronic cough who had at least 1 post-dose secondary endpoint assessment of daytime cough frequency in response to ATP challenge.

End point type	Secondary
----------------	-----------

End point timeframe:

From start of challenge (2 hours post-dose) to bedtime; up to 12 hours

End point values	Cohort 1: Gefapixant 300 mg/Chronic Cough	Cohort 1: Placebo/Chronic Cough	Cohort 2: Gefapixant 50 mg/Chronic Cough	Cohort 2: Placebo/Chronic Cough

Secondary: Percentage of Participants Who Experienced at Least One Adverse Event

End point title	Percentage of Participants Who Experienced at Least One Adverse Event
-----------------	---

End point description:

An adverse event (AE) is any untoward medical occurrence in a study participant administered a pharmaceutical product that does not necessarily have to have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product, whether or not related to the medicinal product. The analysis population for this endpoint included all randomized participants who received at least 1 dose of study medication.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to Day 41

Adverse event reporting additional description:

The safety analysis population included all randomized participants who received at least 1 dose of study medication. The analysis population for number of deaths (all causes) included all randomized participants.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 February 2015	Amendment 1: Added steps specifying when and for which treatment group the cough monitor was attached and removed
17 July 2015	Amendment 2: Clarified that an ambulatory cough recorder chest microphone (in addition to the lapel microphone) would be used for cough participants only
05 August 2015	Amendment 3: Removed spirometry from the Schedule of Assessments and Procedures
02 September 2015	Amendment 4: Low Dose Extension (AF-219 50 mg, Cohort 2) added to include up to an additional 24 participants
19 October 2015	Amendment 5: Time frame of the exclusion criteria for treatment with an investigational drug decreased to facilitate the enrollment of participants in Cohort 1 into Cohort 2

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
