

Clinical trial results:

A 24 week off drug extension, parallel group, study assessing durability of effect on skeletal muscle strength and function following a 6-month double-blind, placebo controlled study evaluating bimagrumab in older adults with sarcopenia (InvestiGAIT extension)

Summary

EudraCT number	2015-000471-27
Trial protocol	ES BE DK

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 December 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 December 2018
Global end of trial reached?	Yes
Global end of trial date	03 December 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to assess the durability of effect of bimagrumab (BYM338) on physical function as measured by the Short Physical Performance Battery (SPPB) total score at Week 49.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 July 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	131
85 years and over	29

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

This study was conducted in 30 centers in 12 countries: Australia (1), Belgium (1), Czech Republic (1), Denmark (1), France (2), Japan (10), Russia (4), South Korea (1), Spain (2), Switzerland (1), Taiwan (1), United States (5).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Population I: BYM338 700 mg

Arm description:

Follow-up (arm 1): Patients in Population I received 6 doses of bimagrumab 70 mg, 210 mg, 700 mg or placebo – one approximately every four weeks – over a 20-week period providing drug exposure for a total of 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Bimagrumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

6 doses of bimagrumab 700 mg one approximately every four weeks – over a 20-week period providing drug exposure for a total of 24 weeks.

Arm title	Population I BYM338: 700 mg to Placebo
------------------	--

Population I & II: Short Physical Performance Battery (SPPB) total score at Week 25			
Baseline Extension Visit = Week 25. SPPB evaluates lower extremities in three functional components: maintenance of standing balance, usual gait speed and chair stand. Each test yields a score on a scale from 0 to 4 (total score 0-12, with the higher score reflecting a higher level of function).			
Units: Total scores			
arithmetic mean	8.8	10.4	8.6
standard deviation	± 2.17	± 1.34	± 1.67
Population I & II: 6-minute walking distance (6MWT) at Week 25			
Baseline Extension Visit = Week 25. The 6MWT measures the distance an individual is able to walk over a total of six minutes on a hard, flat surface. The goal is for the individual to walk as far as possible in six minutes. The individual is able to self-pace and rest as needed as they traverse back and forth along a marked walkway.			
Units: meters			
arithmetic mean	302.73	353.10	313.67
standard deviation	± 130.22	± 66.17	± 71.39
Population I & II: Gait speed at Week 25			
Baseline Extension Visit = Week 25. Gait Speed was assessed as part of SPPB, over a 4 meter distance of a 6 meter course. Gait speed assesses a person's usual walking speed, which is defined as the speed a person normally walks from one place to another. Poor functional performance is measured by slow or declining gait speed.			
Units: m/sec			
arithmetic mean	0.8	0.9	0.9

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from first dose of study treatment until end of study treatment plus 30 days post treatment, up to a maximum treatment duration of 24 weeks

Adverse event reporting additional description:

Adverse events presented below are events considered to be treatment-emergent, therefore only events occurring in Population I are summarized. Patients in Population II did not receive study medication (were followed-up of-drug), thus any events occurring in this group were not treatment-emergent and are not captured in the summary.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 April 2017	<ol style="list-style-type: none">1. Re-focus of the study on assessing the durability of effect of bimagrumab over a 24 week period off drug.2. Study was reduced to 24 weeks with site visits every 12 weeks instead of every 4 weeks and phone calls were added in between visits to promote adherence and to record falls or other associated feedback from study participants3. Addition of a planned interim analysis4. The need for unblinding of core treatment code for newly enrolled patients followed the core study protocol procedure5. All IMP related sections were only applicable to those patients enrolled under the original protocol version6. Inclusion/exclusion criteria were simplified as only patients willing and having fully completed the 24 weeks of core study treatment are eligible7. As part of the alignment between the core and the extension studies, the following key changes were implemented in this extension study:<ol style="list-style-type: none">a. The SPPB replaced the 6MWT as primary endpoint, the 6MWT changed to a secondary endpointb. The 400 meter walk test was removedc. Echocardiography was eliminated and overall cardiac monitoring was reduced from a level of intense monitoring to one reflecting standard of care following the results of the dedicated profiling cardiac safety studyd. Additional safety monitoring guidance for patients with change in body weight since the core study baseline of +/- 5%e. Removal of certain central laboratory assessments (i.e. urinalysis, coagulation measurement)f. e-devices diaries (falls and exercises) are replaced by paper diaries which are easier to use for this patient populationg. Addition of the PAISs instrument, a Novartis developed PRO and the necessary battery of questionnaires to contribute to its validation (i.e. PGIC, PGIS, SF-36v2, EQ-5D-5L)h. The frequency of the DXA assessment was reduced to a final one at the EOS only

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
