General information about the trial

Main objective of the trial:

The primary efficacy objective was to demonstrate comparability of treatment with alglucosidase alfa produced at the 4000L scale in subjects previously treated with 160L scale alglucosidase alfa.

Protection of trial subjects:

Pediatric Subjects: The study was conducted by investigators experienced in the treatment of pediatric subjects. The parent(s) or guardian(s) as well as the children were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time. In addition to the consent form for the parent(s)/guardian(s), an assent form in child-appropriate language was provided and explained to the child. Repeated invasive procedures were minimized. The number of blood samples as well as the amount of blood drawn were adjusted according to age and weight. A topical anesthesia may have been used to minimize distress and discomfort.

Adult Subjects: Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency.

Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Recruitment details: -

Pre-assignment

Screening details:

The study was conducted in United States. A total of 113 subjects were treated between 9 March 2012 and 4 June 2014.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Alglucosidase Alfa
------------------	--------------------

Arm description:

Alglucosidase alfa produced at 4000 L scale for 52 weeks.

Arm type	Experimental
Investigational medicinal product name	Alglucosidase Alfa
Investigational medicinal product code	
Other name	Lumizyme®
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

4000 L alglucosidase alfa as per subject's routine practice.

Number of subjects in period 1	Alglucosidase Alfa
Started	113
Completed	100
Not completed	13
Consent withdrawn by subject	2

End point title	Percentage of Subjects Who were Clinically Stable or Improved at Week 52 ^[1]
-----------------	---

End point description:

Clinical stability defined as absence of death due to disease progression or new dependency on invasive ventilation and; decline in cardiac status, motor function, and pulmonary function from baseline. Analysis was carried out on full analysis population defined as all subjects who receive at least 1 infusion of 4000 L alglucosidase alfa during the study.

End point title	Change From Baseline on Left Ventricular Mass Z-Score (LVM-Z) at Week 52
End point description: Z--Scores indicate the number of standard deviations (SD) from the mean in a normal distribution. A negative change from baseline indicates a decrease and positive change from baseline indicates an increase in LVM-Z score. The normal range is -2 to 2 and greater than 2 may indicate left ventricular hypertrophy. Analysis was carried out on full analysis population.

End point title	Change From Baseline on Gross Motor Function Measure-88 (GMFM-88) at Week 52
End point description: GMFM-88 (88-item measure to detect gross motor function) consists of 5 components, each measured on a 4-point Likert scale. The score for each dimension was expressed as a percentage of the maximum score for that dimension. Total score ranges from 0% to 100%, where higher scores indicate better motor functions. Analysis was carried out on full analysis population. Number of subjects analysed = subjects with baseline and Week 52 GMFM-88 data.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AE) were collected from signature of the informed consent form up to the final visit (Week 52) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported adverse events are treatment-emergent adverse events that is AEs that developed/worsened during the 'on treatment period' (from the first infusion of study drug up to 30 days after last infusion of study drug). Analysis was performed on safety population which included all treated subjects.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 October 2012	6-month administrative analysis was added. -For the primary efficacy endpoint, in addition to the analysis using the full analysis set specified in the original protocol, the analysis was also to be conducted on the Per-Protocol Analysis Set. -The efficacy endpoint of left ventricular mass index Z- score (LVMI-Z) was revised to LVM-Z. -Shortening of the post-infusion observation period was changed from being allowed after a 6-month treatment period to being allowed after a 3-month treatment period. -Home infusions were changed from being allowed after 4 infusions in subjects with no history of moderate or severe infusion-associated reactions (IARs) or serious adverse events (SAEs) to being allowed after 2 infusions in subjects with no history of moderate or severe IARs or SAEs. -The Sponsor's department name, Global Patient Safety and Risk Management, was updated for a recent name change to Global Pharmacovigilance and Epidemiology. -Text was added to clarify that pulmonary function tests were not required in young subjects unable to undergo testing. -The protocol was modified to ensure that subject position during measurement of vital signs was to be recorded in the electronic case report form and that vital signs and weight were to be obtained at every study visit. -The IgG antibodies, inhibitory antibodies, and urine pregnancy testing schedules were clarified. -Text referring to subjects' previous treatment "in the commercial setting" was deleted as subjects treated with 160L scale product in other clinical trials were eligible to enroll. - Measurement of R voltage V6 and S voltage V1 were removed from the ECG. -Text was deleted to reflect that efficacy and safety results would not be summarized by baseline Pompe disease status. - The presentation of results of planned clinical laboratory assessments was clarified. -The stipulation that the Data Safety Monitoring Board (DSMB) would be comprised of 4 physicians was removed.

Notes:

Interruptions (globally)
