**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 September 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 September 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this Phase 2 study was to compare the efficacy and safety of palbociclib in combination with cetuximab versus cetuximab in HPV negative, cetuximab naïve subjects with R/M SCCHN after failure of 1 platinum containing regimen.

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of subjects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Japan: 10
Country: Number of subjects enrolled	Korea, Republic of: 5
Country: Number of subjects enrolled	Mexico: 7
Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Romania: 9
Country: Number of subjects enrolled	Russian Federation: 9
Country: Number of subjects enrolled	Serbia: 8
Country: Number of subjects enrolled	Slovakia: 4
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	Taiwan: 13
Country: Number of subjects enrolled	Ukraine: 24
Country: Number of subjects enrolled	United States: 16
Worldwide total number of subjects	125
EEA total number of subjects	33

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	88
From 65 to 84 years	37
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 125 subjects were randomized; among them, 124 subjects received study treatments. One (1) subject in the palbociclib + cetuximab treatment group was randomized but not treated.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Palbociclib + Cetuximab

Arm description:

Subjects received Palbociclib, 125 mg, orally once daily (QD) with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m<sup>2</sup> initial dose as a 120-minute intravenous (IV) infusion followed by 250 mg/m<sup>2</sup> weekly infused over 60 minutes.

Arm type	Experimental
Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Palbociclib 125 mg was administered QD with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m<sup>2</sup> initial dose as a 120-minute IV infusion followed by 250 mg/m<sup>2</sup> weekly infused over 60 minutes.

Investigational medicinal product name	Palbociclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Palbociclib 125 mg was administered QD with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m<sup>2</sup> initial dose as a 120-minute intravenous (IV) infusion followed by 250 mg/m<sup>2</sup> weekly infused over 60 minutes.

<b>Arm title</b>	Placebo + Cetuximab
------------------	---------------------

Arm description:

Subjects received Placebo orally QD with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m<sup>2</sup> initial dose as a 120-minute IV infusion followed by 250 mg/m<sup>2</sup> weekly infused over 60 minutes.

Arm type	Placebo
Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

---

**Dosage and administration details:**

Placebo was administered orally QD with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m<sup>2</sup> initial dose as a 120-minute IV infusion followed by 250 mg/m<sup>2</sup> weekly infused over 60 minutes.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

Placebo was administered orally QD with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m<sup>2</sup> initial dose as a 120-minute IV infusion followed by 250 mg/m<sup>2</sup> weekly infused over 60 minutes.

<b>Number of subjects in period 1</b>	<b>Palbociclib + Cetuximab</b>	<b>Placebo + Cetuximab</b>
Started	65	60
Received treatment	64	60
Completed	0	0
Not completed	65	60

## End points

### End points reporting groups

Reporting group title	Palbociclib + Cetuximab
Reporting group description: Subjects received Palbociclib, 125 mg, orally once daily (QD) with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m <sup>2</sup> initial dose as a 120-minute intravenous (IV) infusion followed by 250 mg/m <sup>2</sup> weekly infused over 60 minutes.	
Reporting group title	Placebo + Cetuximab
Reporting group description: Subjects received Placebo orally QD with food on Day 1 to Day 21 followed by 7 days off treatment in a 28-day cycle in combination with Cetuximab, 400 mg/m <sup>2</sup> initial dose as a 120-minute IV infusion followed by 250 mg/m <sup>2</sup> weekly infused over 60 minutes.	

### Primary: Overall Survival (OS)

End point title	Overall Survival (OS)
End point description: OS was defined as the time from the date of randomization to the date of death due to any cause. OS (in months) was calculated as (date of death – randomization date +1)/30.4. For subjects lacking survival data beyond the date of their last follow-up, the OS time was censored on the last date they were known to be alive. Subjects lacking survival data beyond randomization had their OS times be censored at randomization. Estimates of OS and its 95% confidence interval were determined using Kaplan-Meier method. The analysis population was intent-to-treat (ITT) population, which included all subjects who were randomized, with study drug assignment designated according to initial randomization, regardless of whether subjects received study drug or received a different drug from that to which they were randomized.	
End point type	Primary
End point timeframe: Baseline up to primary completion date (PCD) (about 34 months)	

End point values	Palbociclib + Cetuximab	Placebo + Cetuximab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	65	60		
Units: months				
median (confidence interval 95%)	9.7 (7.3 to 13.9)	7.8 (6.7 to 10.6)

Notes:

[2] - 1-sided p-value was from the log-rank test stratified by stratification factors ECOG per randomization.

## Secondary: Duration of Response (DR)

End point title	Duration of Response (DR)
End point description:	
DR was defined as the time from the first documentation of objective tumor response (CR or PR) to the first documentation of disease progression or to death due to any cause, whichever occurred first. If tumor progression data included more than 1 date, the first date was used. DR was calculated as [(the date response ended (ie, date of PD or death) – first CR or PR date + 1)]/30.4. DR was only calculated for the subgroup of all ITT subjects with an objective tumor response.

## Secondary: Number of Subjects with Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Subjects with Treatment-Emergent Adverse Events (TEAEs)
End point description:	
TEAEs were defined as adverse events (AEs) which occurred for the first time during the effective duration of treatment or AEs that increased in severity during treatment. Serious AEs (SAEs) were defined as any untoward medical occurrence at any dose that resulted in death; was life-threatening (immediate risk of death); required inpatient hospitalization or caused prolongation of existing hospitalization; resulted in persistent or significant disability/incapacity (substantial disruption of the ability to conduct normal life functions). AEs included SAEs and non-serious AEs. Causality to study	

treatment was determined by the investigator. Severity was graded according to National Cancer Institute (NCI) Common Terminology Criteria for Adverse Events (CTCAE) version 4.03. The analysis population included all subjects who received at least 1 dose of study medication, with treatment assignments designated according to actual study treatment received.

End point type	Secondary
End point timeframe:

## Secondary: Change from Baseline in European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-C30 (EORTC QLQ-C30)

End point title	Change from Baseline in European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-C30 (EORTC QLQ-C30)
End point description:	
<p>The EORTC QLQ-C30 is a 30 item questionnaire composed of 5 multi-item functional subscales, 3 multi-item symptom scales, a global health/quality of life (QOL) subscale, and 6 single items assessing other cancer related symptoms. The questionnaire employed twenty-eight 4 point Likert scales with responses from "not at all" to "very much" and two 7 point Likert scales for global health and overall QOL. For functional and global QOL scales, higher scores represented a better level of functioning and were converted to a 0 to 100 scale. For symptom oriented scales, a higher score represented more severe symptoms. Negative changes from baseline indicate deterioration in functioning / global QoL scales and improvement in symptom scales. The analysis population included all ITT subjects, who had both baseline and at least 1 follow-up patient reported outcome (PRO) assessment before treatment discontinuation.</p>	
End point type	Secondary

## Secondary: Summary of PFS and OS for P16 Negative (%Positive tumor cells < 70%)

End point title	Summary of PFS and OS for P16 Negative (%Positive tumor cells < 70%)
-----------------	--

End point description:

A central test was defined as the tumor tissue-based p16 IHC test performed at a central laboratory (Ventana). The analysis of concordance between HPV status as assessed by local or central laboratory included the number and percentage of subjects with p16 detected or not detected at the central laboratory, given that all local testing must have been negative for HPV in order for the subject to be eligible for the study. Initial analysis of the p16 status was based on the conventional cutoff of 70% p16-positive tumor cells to call out cases that might be considered HPV-positive. P16 expression was scored as positive if strong and diffuse nuclear and cytoplasmic staining was present in at least 70% of the tumor cells. The analysis population included all subjects treated with cetuximab in combination with placebo or palbociclib who had at least 1 baseline biomarker assessment.

## Statistical analyses

No statistical analyses for this end point

## Secondary: Trough plasma concentration (Ctrough) and within-participant mean steady-state pre-dose concentration (WPM-Ctrough) at steady state for Palbociclib

End point title	Trough plasma concentration (Ctrough) and within-participant mean steady-state pre-dose concentration (WPM-Ctrough) at steady state for Palbociclib <sup>[3]</sup>
-----------------	--

End point description:

Ctrough is steady-state pre-dose concentration, which was observed directly from data. WPM-Ctrough is within-subject mean steady-state pre-dose concentration. For palbociclib, a steady-state trough was to be defined as a pre-dose plasma concentration following at least 7 consecutive days of 125 mg daily dose without dosing interruption and the time window for the PK collection was to be between 24 hr +/- 2 hr and 24 min post-dose the day prior to PK collection and no more than 1 hr post-dose on the day of PK collection. The analysis population included all as-treated subjects, who were treated with the study treatments and had a t least measured plasma concentration for at least 1 analyte (palbociclib and/or cetuximab)

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose of Day 15 in Cycle 1 and Cycle 2

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

## Statistical analyses

**Secondary: Summary of PFS and OS Based on Investigator Assessment by Rb Expression  $\geq 1\%$** 

End point title	Summary of PFS and OS Based on Investigator Assessment by Rb Expression $\geq 1\%$
-----------------	--

## End point description:

Rb expression in the palbociclib and cetuximab treatment group, the relationship of the biomarkers (individually) with PFS and OS were explored using graphical methods such as box plots, at baseline. The tumors of subjects were Rb-positive, which was defined by Rb IHC with  $\geq 1\%$  positive tumor cells. The analysis population included all subjects treated with cetuximab in combination with placebo or palbociclib who had at least 1 baseline biomarker assessment.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the first dose through and including 28 calendar days after the last administration of the study treatment (up to 6.9 years).

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. An event may be categorized as serious in 1 subject and as non-serious in another subject, or 1 subject may have experienced both a serious and non-serious event during the study. Total number at risk below refers to the number of subjects evaluable for SAEs or AEs.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 April 2015	1. Protocol Summary/Study Design/ Tumor Assessment Requirements Flowchart/Sections 3 Study Design, 7.1.1.2 Post-Baseline Tumor Assessments: Removed statement concerning continuous treatment beyond RECIST-defined disease progression (agreement between Sponsor and FDA). 2. Protocol Summary, Study Design/Section 3 Study Design/Section 4.3 Randomization Criteria/Section 5.1 Allocation to Treatment/9.2.1 Analysis of Primary Endpoint: Clarified stratification terminology from checkpoint inhibitors to immunotherapy. 3. Schedule of Activities/Tumor Assessment Requirements Flowchart/Sections 7.1.1.1 Screening/Baseline Tumor Assessments and 7.1.1.2 Post-Baseline Tumor Assessments: Added CT or MRI scan of the chest and abdomen (including the liver) to support PFS secondary endpoint. 4. Clarification of Inclusion Criteria # 9 for patients aged 20 years old or greater as applicable by local country regulations. 5. Section 5.5.3.1.1 Cetuximab Hypersensitivity Reactions: Simplified wording for cetuximab retreatment after Grade 2 hypersensitivity reactions. 6. Section 5.5.3.1.4 Cetuximab Gastrointestinal Adverse Events: Added "Patients experiencing treatment-related Grade 4 vomiting or diarrhea should have their cetuximab and palbociclib/placebo treatments permanently discontinued." 7. Section 5.5.3.2.1 Palbociclib/Placebo Dosing Interruptions/Delays: Added "Patients experiencing treatment-related Grade 4 vomiting, diarrhea, or hypertension should have their palbociclib/placebo and cetuximab treatments permanently discontinued." Removed "≥" from Grade 3 non-hematologic bullet point (5th bullet point). Added bullet point "Grade 4 non-hematologic toxicities (see exceptions of vomiting, diarrhea, or hypertension above)." 8. Required Protocol Template updates in Adverse Event Reporting section and Communication of Results by Pfizer section.
31 March 2016	1. Schedule of Activities/Tumor Assessment Requirements Flowchart: 29Jul2015 PCL removal of the phrase "on Day 1 of event cycles" for Disease Assessment to align with Section 7.1.1, Tumor Assessment. 2. Schedule of Activities, footnote c/Section 6.2, Active Treatment Phase: Add vital signs for any new cycle Day 1 procedures. 3. Schedule of Activities, footnote l/Section 6.3, End of Treatment Visit/Section 7.3.1, Laboratory Safety Assessments: included patients starting post-study anticancer therapy for 8 week chemistry panel analysis. 4. Schedule of Activities, footnote n /Abbreviations/Section 7.3.1, Laboratory Safety Assessments: 21Oct2015 PCL added aPTT as acceptable coagulation parameter. 5. Schedule of Activities, footnote y/Section 5.8, Concomitant Treatments: Added further clarification for patients beginning new therapy before the 28-day time period is complete. 6. Schedule of Activities, footnote z/Section 7.7, Patient Reported Outcomes: Added further clarification for patients starting post-study anticancer therapy. 7. Tumor Assessment Requirements Flowchart, footnote d/Section 7.1.1 Tumor Assessment: Removed the phrase "and pelvis". 8.
