

Clinical trial results:

A randomized double-blind, placebo-controlled study of ribociclib in combination with fulvestrant for the treatment of men and postmenopausal women with hormone receptor positive, HER2-negative, advanced breast cancer who have received no or only one line of prior endocrine treatment

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 January 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 January 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to compare progression free survival (PFS) between ribociclib in combination with fulvestrant to placebo in combination with fulvestrant among men and postmenopausal women with HR+, HER2-negative advanced breast cancer who received no or only one prior endocrine treatment for advanced disease.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

From 65 to 84 years	335
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

174 sites across 30 countries enrolled participants

Pre-assignment

Screening details:

Screening assessments were conducted up to 28 days prior to the randomization

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Blinding implementation details:

A protocol amendment 4 (dated 29-Jan-2020) allowed for unblinding of study participants, and those still receiving placebo had the option to switch to the ribociclib arm. The decision for crossover was made at the investigator's discretion and required patient consent.

Arms

Are arms mutually exclusive?	Yes
Arm title	Ribociclib + fulvestrant

Arm description:

Ribociclib was administered orally at a daily dose of 600mg for 21 consecutive days within a 28-day cycle. This treatment was combined with fulvestrant, which was administered via intramuscular injections of 500mg every 28 days starting on Day 1 of each cycle. Additionally, an extra dose of fulvestrant was given on Day 15 of Cycle 1.

Arm type	Experimental
Investigational medicinal product name	Ribociclib
Investigational medicinal product code	LEE011
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ribociclib capsules were administered orally at a daily dose of 600mg for 21 consecutive days within a 28-day cycle.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo capsules were administered orally for 21 consecutive days within a 28-day cycle.

Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Fulvestrant was administered via intramuscular injections at a dose of 500mg every 28 days, starting on Day 1 of each cycle. In Cycle 1, an additional dose of Fulvestrant was given on Day 15

Arm title	Placebo + fulvestrant
------------------	-----------------------

Arm description:

Placebo was administered orally for 21 consecutive days within a 28-day cycle. This treatment was combined with fulvestrant, which was administered via intramuscular injections of 500mg every 28 days starting on Day 1 of each cycle. Additionally, an extra dose of fulvestrant was given on Day 15 of Cycle 1. Participants were unblinded after the implementation of protocol amendment 4 (29-Jan-20) and were given the option to crossover to treatment with ribociclib and fulvestrant.

Arm type	Placebo
Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Fulvestrant was administered via intramuscular injections at a dose of 500mg every 28 days, starting on Day 1 of each cycle. In Cycle 1, an additional dose of Fulvestrant was given on Day 15

Number of subjects in period 1	Ribociclib + fulvestrant	Placebo + fulvestrant
Started	484	242
Untreated	1	1

Primary: Progression Free Survival (PFS) per Investigator assessment

End point title	Progression Free Survival (PFS) per Investigator assessment
End point description: PFS was defined as the period starting from the date of randomization to the date of the first documented progression or death caused by any reason. In cases where patients did not experience an event, the PFS was censored at the date of the last adequate tumor assessment. Clinical deterioration without objective radiological evidence was not considered as documented disease progression. PFS was assessed via local radiology assessment according to RECIST 1.1. The Kaplan-Meier method was used to estimate PFS, and the median PFS, along with 95% confidence intervals, was reported for each treatment group. The distribution of PFS between the two arms was compared using a stratified log-rank test at a one-sided 2.5% level of significance. The PFS hazard ratio with two-sided 95% confidence interval was derived from the stratified Cox proportional hazards model.	
End point type	Primary

Secondary: Time to definitive 10% deterioration in the global health status/quality of life (GHS/QoL) scale score of the European Organization for Research and Treatment of Cancer's core quality of life questionnaire (EORTC QLQ-C30)

End point title	Time to definitive 10% deterioration in the global health status/quality of life (GHS/QoL) scale score of the European Organization for Research and Treatment of Cancer's core quality of life questionnaire (EORTC QLQ-C30)
-----------------	---

End point description:

The EORTC QLQ-C30 is a questionnaire that includes 5 functional scales, 3 symptom scales, a GHS/QoL scale, and 6 single items. GHS/QoL scale scores range between 0 and 100. A high score for GHS/QoL represents better functioning or QoL.

The time to definitive 10% deterioration is defined as the time from the date of randomization to the date of event, which is defined as at least 10% relative to baseline worsening of the QoL score (without further improvement above the threshold) or death due to any cause. The Kaplan-Meier method was used to estimate the distribution, and the median time to definitive 10% deterioration, along with 95% confidence intervals, was reported for each treatment group. If a patient had not had an event, time to deterioration was censored at the date of the last adequate QoL evaluation.

Secondary: Time to definitive deterioration of Eastern Cooperative Oncology Group Performance Status (ECOG PS) in one score category

End point title	Time to definitive deterioration of Eastern Cooperative Oncology Group Performance Status (ECOG PS) in one score category
-----------------	---

End point description:

ECOG PS categorized patients based on their ability to perform daily activities and self-care, with scores ranging from 0 to 5. A score of 0 indicated no restrictions in activity, while higher scores indicated increasing limitations. Time to definitive deterioration was the time from randomization to the date of the event, defined as experiencing an increase in ECOG PS by at least one category from baseline or

death. A deterioration was considered definitive if no improvements were observed at a subsequent time. The KM method was used to estimate the distribution, and the median time to definitive deterioration, along with 95% confidence intervals, was reported for each treatment group. Patients receiving any further therapy prior to definitive worsening were censored at their date of last assessment prior to start of therapy. Patients that had not worsened at the data cutoff point were censored at the date of last assessment.

Secondary: Ribociclib plasma concentrations

End point title	Ribociclib plasma concentrations ^[2]
End point description:	
Blood samples were collected to assess the concentration by time point for ribociclib. Participants were classified into the following dose groups at each timepoint: 1) ribociclib 600 mg: consisted of all participants who provided evaluable concentrations after receiving at least 10 consecutive daily ribociclib doses of 600 mg immediately prior to the blood collection without a dose change or interruption. 2)	

ribociclib 400 mg: consisted of all participants who provided evaluable concentrations after receiving at least 10 consecutive daily ribociclib doses of 400 mg immediately prior to the blood collection without a dose change or interruption. 3) ribociclib 200 mg: consisted of all participants who provided evaluable concentrations after receiving at least 10 consecutive daily ribociclib doses of 200 mg immediately prior to the blood collection without a dose change or interruption.

Note: 9999 indicates that the value was not estimable

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 February 2016	Guidance for management of QTcF prolongation and hepatic toxicities. As QT prolongation is an important identified risk identified risk in patients treated with ribociclib, ECG monitoring was updated from single ECG monitoring to triplicate ECG monitoring. As hepatic toxicity is an important identified risk in patients treated with ribociclib, liver function monitoring and dose adjustment guidance were updated. Additional blood collections for laboratory assessments to further characterize potential drug-induced liver injury, including immunologic markers (e.g. immunoglobulins, C-reactive protein, autoimmune hepatitis markers) and total bile acids as part of clinical safety assessments, as well as blood collections for retrospective analysis of exploratory liver biomarkers (e.g. micro-RNA 122) and genome wide association studies (GWAS/HLA) were added. Management of dose modifications based on local laboratory results. Modification of the study population and eligibility criteria to include men (based on Health Authority interactions)
28 July 2016	Originally planned futility interim analysis (IA) was eliminated. Originally planned efficacy IA was eliminated and a requirement for a minimum amount of events coming from 1st line patients in the final analysis was added. PFS based on BIRC assessments was not a secondary endpoint but was added as a supportive analysis for the primary analysis. Progression on next-line therapy was added as an exploratory objective.
06 August 2018	Updated the dose adjustment and management recommendations for QTcF prolongation. Updated the prohibited concomitant medications based on drug-drug interaction and comedication considerations. PRO assessment schedule updated to follow the efficacy assessment schedule. As the radiology review from the blinded independent review is completed, note added on stopping the transmission of images to Contract Research organization (CRO). Updated the withdrawal of consent language to align with the new Global Data Protection Requirements.
29 January 2020	Allowed unblinding of all patients and investigators to allow for knowledge of patient's current treatment allocation and allow for patients currently receiving placebo the opportunity to transition to ribociclib treatment per investigator discretion. Also, visit evaluation schedule was updated for patients on placebo transitioning to ribociclib. Allowed for central safety electrocardiogram (ECG) assessments to cease and ECG assessments to be performed locally. Added guidance that patient reported outcome (PRO) measures should no longer be collected. Updated the biomarker collection schedule. The blood for circulating tumor DNA will be collected from all patients only at end of trial (EOT) and an additional collection on the first day of LEE011 treatment for patients who elect to cross-over from placebo

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
