Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 September 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 September 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study was to demonstrate non-inferiority in efficacy of a darunavir/cobicistat/emtricitabine/tenofovir alafenamide (D/C/F/TAF) fixed dose combination (FDC) tablet versus Darunavir/Cobicistat (DRV/COBI) FDC coadministered with Emtricitabine/tenofovir disoproxil fumarate (FTC/TDF) FDC in human immunodeficiency virus-1 (HIV-1) infected, antiretroviral (ARV) treatment naive adult subjects, as determined by the proportion of virologic responders defined as having HIV 1 Ribonucleic Acid (RNA) less than (<) 50 copies per milliliter (copies per mL) at Week 48 (Food and Drug Administration [FDA]-defined snapshot analysis), with a maximum allowable difference of 10 percent (%).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 July 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 25
Country: Number of subjects enrolled	Canada: 32
Country: Number of subjects enrolled	Germany: 88
Country: Number of subjects enrolled	Spain: 138
Country: Number of subjects enrolled	France: 51
Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	Italy: 80
Country: Number of subjects enrolled	Poland: 78
Country: Number of subjects enrolled	Russian Federation: 86
Country: Number of subjects enrolled	United States: 133
Worldwide total number of subjects	725
EEA total number of subjects	460

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	724
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 725 subjects (362 to D/C/F/TAF group and 363 in control group). 296 subjects in D/C/F/TAF group and 289 subjects in control group completed the study and 66 subject in D/C/F/TAF group and 74 subjects in control group discontinued the study.

Period 1

Period 1 title	BL to EOE-Test and BL to Switch- Control
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	D/C/F/TAF (Test) (Baseline [BL] to End of Extension [EOE])

Arm description:

Subjects received a single oral tablet containing darunavir (DRV) 800 milligram (mg)/ cobicistat (COBI) 150 mg/ emtricitabine (FTC) 200 mg/ tenofovir alafenamide (TAF) 10 mg (D/C/F/TAF fixed dose combination [FDC]) once daily along with DRV/COBI FDC-matching placebo and FTC/tenofovir disoproxil fumarate (TDF) FDC-matching placebo tablets once daily up to Week 48 analysis unblinding visit (that is, after last subject has reached Week 48). After Week 48 analysis unblinding visit, all subjects received D/C/F/TAF treatment up to Week 96 during the open-label, single-group treatment phase. After Week 96, subjects were given the opportunity to continue D/C/F/TAF treatment during an extension phase until the D/C/F/TAF FDC tablet became commercially available.

Arm type	Experimental
Investigational medicinal product name	Darunavir 800 mg/Cobicistat 150 mg/Emtricitabine 200 mg/Tenofovir Alafenamide 10 mg (D/C/F/TAF) FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received a single oral tablet of D/C/F/TAF 800/150/200/10 mg FDC once daily.

Investigational medicinal product name	FTC/TDF FDC-matching Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subject received a single oral placebo tablet matching to FTC/TDF FDC once daily.

Investigational medicinal product name	DRV/COBI FDC-matching Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subject received a single oral placebo tablet matching to DRV/COBI FDC once daily.

Arm title	DRV/COBI+ FTC/TDF (Control) (Baseline to Switch)
------------------	--

Arm description:

Subjects received DRV 800 mg/COBI 150 mg FDC and FTC 200 mg/TDF 300 mg FDC along with D/C/F/TAF FDC-matching placebo tablet once daily up to Week 48 analysis unblinding visit (that is, after last subject has reached Week 48).

Arm type	Active comparator
Investigational medicinal product name	D/C/F/TAF FDC-matching Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subject received a single oral placebo tablet matching to D/C/F/TAF FDC once daily.

Investigational medicinal product name	FTC/TDF FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subject received a single oral tablet of FTC/TDF FDC once daily.

Investigational medicinal product name	DRV/COBI FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subject received a single oral tablet of DRV/COBI FDC once daily.

Number of subjects in period 1	D/C/F/TAF (Test) (Baseline [BL] to End of Extension [EOE])	DRV/COBI+ FTC/TDF (Control) (Baseline to Switch)
Started	362	363
Completed	296	322
Not completed	66	41
Adverse event, serious fatal	-	1
Consent withdrawn by subject	14	9
Physician decision	9	4
Adverse event, non-fatal	12	16
Pregnancy	1	1
Non-compliance with study drug	2	-
Unspecified	11	2
Lost to follow-up	17	8

Period 2

Period 2 title	Switch to D/C/F/TAF (until EOE)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Switch to D/C/F/TAF
------------------	---------------------

Arm description:

After Week 48 analysis unblinding visit, subjects earlier receiving treatment with DRV/COBI+ FTC/TDF (Control) switched to D/C/F/TAF treatment and continued for up to Week 96 during open-label, single-group treatment phase. After Week 96, subjects were given the opportunity to continue D/C/F/TAF treatment until the D/C/F/TAF FDC tablet became commercially available.

Arm type	Experimental
Investigational medicinal product name	D/C/F/TAF FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received a single oral tablet of D/C/F/TAF FDC once daily.

Number of subjects in period 2^[1]	Switch to D/C/F/TAF
Started	322
Completed	289
Not completed	33
Adverse event, serious fatal	1
Consent withdrawn by subject	10
Physician decision	1
Adverse event, non-fatal	5
Unspecified	4
Lost to follow-up	12

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Out of 363 subjects in the DRV/COBI+ FTC/TDF (Control) group, 322 subjects switched to D/C/F/TAF treatment after Week 48 or unblinding.

Baseline characteristics

Reporting groups

After Week 96, subjects were given the opportunity to continue D/C/F/TAF treatment until the D/C/F/TAF FDC tablet became commercially available.

Subject analysis set title	Darunavir 800 mg (D/C/F/TAF [Test])
----------------------------	-------------------------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

Subjects received DRV 800 mg along with COBI 150 mg, FTC 200 mg, TAF 10 mg as a (D/C/F/TAF) FDC oral tablet once daily along with DRV/COBI FDC matching placebo and FTC/TDF FDC-matching placebo tablets once daily up to Week 48.

Subject analysis set title	Tenofovir Alafenamide 10 mg (D/C/F/TAF [Test])
----------------------------	--

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

Subjects received TAF 10 mg along with DRV 800 mg, COBI 150 mg, FTC 200 mg as a (D/C/F/TAF) FDC oral tablet once daily along with DRV/COBI FDC-matching placebo and FTC/TDF FDC-matching placebo tablets once daily up to Week 48.

Primary: Percentage of Subjects With Human Immunodeficiency Virus (HIV)-1 Ribonucleic Acid (RNA) less than (<) 50 Copies per Milliliter (Copies per mL) (Virologic Response) at Week 48 Defined by Food and Drug Administration (FDA) Snapshot Approach

End point title	Percentage of Subjects With Human Immunodeficiency Virus (HIV)-1 Ribonucleic Acid (RNA) less than (<) 50 Copies per Milliliter (Copies per mL) (Virologic Response) at Week 48 Defined by Food and Drug Administration (FDA) Snapshot Approach
-----------------	--

End point description:

Percentage of subjects with a HIV-1 RNA < 50 copies per mL were assessed using FDA snapshot approach which defines a subject's virologic response status using only the viral load at the predefined time point within an allowed window of time, along with study drug discontinuation status. The snapshot approach classified subjects into 3 outcome categories: 1) virologic success (HIV RNA < 20/50/200 copies per mL at Week 48), 2) virologic failure (HIV RNA greater than or equal to [\geq] 20/50/200 copies per mL at Week 48), 3) no viral load data in the Week 48 visit window (discontinued due to adverse event/death/other reason). The missing HIV-1 RNA is considered as non-response. The intent-to-treat (ITT) analysis set included all the subjects who were randomized and received at least one dose of study treatment in the study. Here N (number of subjects analyzed) refers to 363 for test group and 363 for control group.

Secondary: Change From Baseline in Estimated Glomerular Filtration Rate Based on Serum Creatinine (eGFRcr) by Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) Formula at Week 48

End point title	Change From Baseline in Estimated Glomerular Filtration Rate Based on Serum Creatinine (eGFRcr) by Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) Formula at Week 48
-----------------	---

End point description:

Change from baseline in eGFRcr was calculated using the CKD-EPI equation as per which Stage 1 (normal or high GFR [≥ 90 mL/min]); Stage 2 (Mild CKD [60 to 90 mL/min]); Stage 3 (Moderate CKD [30 to 59 mL/min]); Stage 4 (Severe CKD [15 to 29 mL/min]); Stage 5 (End Stage CKD [< 15 mL/min]). The eGFRcr was assessed by calculating serum creatinine (Scr) using the equation: eGFRcr milliliter per minute per 1.72 meter square (mL/min/1.73m²) = $144 \times (\text{Scr}/0.7)^{-0.329} \times 0.993^{\text{age}}$ (Scr ≤ 0.7 mg/dL) and eGFRcr mL/min/1.73m² = $144 \times (\text{Scr}/0.7)^{-1.209} \times 0.993^{\text{age}}$ (Scr > 0.7 mg/dL) for female subjects and eGFRcr mL/min/1.73m² = $141 \times (\text{Scr}/0.9)^{-0.411} \times 0.993^{\text{age}}$ (Scr ≤ 0.9 mg/dL) and eGFRcr mL/min/1.73m² = $141 \times (\text{Scr}/0.9)^{-1.209} \times 0.993^{\text{age}}$ (Scr > 0.9 mg/dL) for male subjects. The ITT analysis set included all the subjects who were randomized and received at least one dose of study treatment in the study. Here, N (number of subjects analyzed) signifies subjects evaluated for this endpoint.

Secondary: Change From Baseline in Estimated Glomerular Filtration Rate Based on Serum Creatinine by (Cockcroft-Gault Formula) at Week 48

End point title	Change From Baseline in Estimated Glomerular Filtration Rate Based on Serum Creatinine by (Cockcroft-Gault Formula) at Week 48
End point description:	
Change from baseline in eGFRcr by (cockcroft-gault formula) was reported. The eGFRcr was assessed by calculated creatinine clearance (CrCl) using the Cockcroft-Gault formula, and was assessed using CrCl [mL/min] = (140 – A) * W / (72 * C) * R. Where A is age at sample date [years], W is body weight at specific visit (kilogram [kg]), C is the serum concentration of creatinine [mg/dL], R=1 if the subject is male and = 0.85 if female. The ITT analysis set included all the subjects who were randomized and received at least one dose of study treatment in the study. Here, N (number of subjects analyzed) signifies subjects evaluated for this endpoint.

Secondary: Change From Baseline in Estimated Glomerular Filtration Rate Based on Serum Cystatin C (eGFRcyst) by CKD-EPI Formula at Week 48

End point title	Change From Baseline in Estimated Glomerular Filtration Rate Based on Serum Cystatin C (eGFRcyst) by CKD-EPI Formula at Week 48
-----------------	---

End point description:

Change from baseline in eGFRcyst was calculated using the CKD-EPI equation as per which Stage 1 (normal or high GFR) ≥ 90 indicates normal kidney function; Stage 2 (Mild CKD): 60 to 89 mL/min indicates mildly reduced kidney function; Stage 3 (Moderate CKD): 30 to 59 mL/min indicates moderately reduced kidney function; Stage 4 (Severe CKD): 15 to 29 mL/min indicates severely reduced kidney function; Stage 5 (End Stage of CKD): <15 mL/min indicate very severe or end stage kidney failure. The eGFRcyst was assessed by calculated serum cystatin C (Scyst) using the equation: $\text{eGFRcyst mL/min}/1.73\text{m}^2 = 133 \times (\text{Scyst}/0.8)^{-0.499} \times 0.996^{\text{age}} [\times 0.932 \text{ if female}]$ ($\text{Scyst} \leq 0.8$ mg/L) and $\text{eGFRcr mL/min}/1.73\text{m}^2 = 133 \times (\text{Scyst}/0.8)^{-1.328} \times 0.996^{\text{age}} [\times 0.932 \text{ if male}]$ ($\text{Scyst} > 0.8$ mg/L). The ITT analysis set included all the subjects who were randomized and received at least one dose of study treatment in the study. Here, N (number of subjects analyzed) signifies subjects

AE is any untoward medical occurrence in subject who received study drug without regard to possibility of causal relationship. Events with Grade 3 or higher (3=Severe; 4=life-threatening; 5=fatal) are events that significantly interrupt usual daily activity, require systemic drug therapy/other treatment and are, in many situations, considered unacceptable or intolerable events. SAE is any adverse event (AE) that results in: death, persistent or significant disability/incapacity, requires inpatient hospitalization or

prolongation of existing hospitalization, is life-threatening experience, is a congenital anomaly/birth defect and may jeopardize subject and/or may require medical or surgical intervention to prevent one of the outcomes listed above. Secondary: Percentage of Subjects With HIV-1 RNA <50 Copies per mL at Week 96 Defined by FDA Snapshot Approach

End point title	Percentage of Subjects With HIV-1 RNA <50 Copies per mL at Week 96 Defined by FDA Snapshot Approach ^[2]
-----------------	--

End point description:

Percentage of subjects with a HIV-1 RNA <50 copies per mL were assessed using FDA snapshot approach which defines a subject's virologic response status using only the viral load at the predefined time point within an allowed window of time, along with study drug discontinuation status. The snapshot approach classified subjects into 3 outcome categories: 1) virologic success (HIV RNA <20/50/200 copies per mL at Week 96), 2) virologic failure (HIV RNA greater than or equal to [\geq] 20/50/200 copies per mL at Week 96), 3) no viral load data in the Week 96 visit window (discontinued due to adverse event/death/other reason). The missing HIV-1 RNA is considered as non-response. The intent-to-treat (ITT) analysis set included all the subjects who were randomized and received at least one dose of study treatment in the study. Here, N (number of subjects analyzed) signifies subjects evaluated for this endpoint.

End point type	Secondary
End point timeframe:	
At Week 96	

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: As planned the endpoint is not reporting Stats for all the arms of the baseline period.

Secondary: Percentage of Subjects With Grade 3 and 4 AEs, SAEs, and Premature Discontinuations due to Adverse Events Post-Week 96 to end of Extension

End point title	Percentage of Subjects With Grade 3 and 4 AEs, SAEs, and Premature Discontinuations due to Adverse Events Post-Week 96 to end of Extension ^[27]
-----------------	--

End point description:

AE is any untoward medical occurrence in subject who received study drug without regard to possibility of causal relationship. Events with Grade 3 or higher (3=Severe; 4=life-threatening; 5=fatal) are events that significantly interrupt usual daily activity, require systemic drug therapy/other treatment and are, in many situations, considered unacceptable or intolerable events. SAE is any adverse event (AE) that results in: death, persistent or significant disability/incapacity, requires inpatient hospitalization or prolongation of existing hospitalization, is life-threatening experience, is a congenital anomaly/birth defect and may jeopardize subject and/or may require medical or surgical intervention to prevent one of the outcomes listed above. The ITT analysis set included all the Subjects who were randomized and received at least one dose of study treatment in the study.

End point type	Secondary

Reporting groups

Reporting group title	D/C/F/TAF (Test) (Baseline to End of Extension [EOE])
-----------------------	---

Reporting group description:

Subjects received a single oral tablet containing darunavir (DRV) 800 milligram (mg)/ cobicistat (COBI) 150 mg/ emtricitabine (FTC) 200 mg/ tenofovir alafenamide (TAF) 10 mg (D/C/F/TAF fixed dose combination [FDC]) once daily along with DRV/COBI FDC-matching placebo and FTC/tenofovir disoproxil fumarate (TDF) FDC-matching placebo tablets once daily up to Week 48 analysis unblinding visit (that is, after last subject has reached Week 48). After Week 48 analysis unblinding visit, all subjects received D/C/F/TAF treatment up to Week 96. After Week 96, subjects were given the opportunity to continue D/C/F/TAF treatment during an extension phase until the D/C/F/TAF FDC tablet became commercially available.

Reporting group title	DRV/COBI+ FTC/TDF (Control) (Baseline to Switch)
-----------------------	--

Reporting group description:

Subjects received DRV 800 mg/COBI 150 mg FDC and FTC 200 mg/TDF 300 mg FDC along with D/C/F/TAF FDC-matching placebo tablet once daily. Subjects received DRV 800 mg/COBI 150 mg FDC and FTC 200 mg/TDF 300 mg FDC along with D/C/F/TAF FDC-matching placebo tablet once daily up to Week 48 analysis unblinding visit (that is, after last subject has reached Week 48).

Reporting group title	Switch to D/C/F/TAF Group
-----------------------	---------------------------

Reporting group description:

After Week 48 analysis unblinding visit, subjects earlier receiving treatment with DRV/COBI+ FTC/TDF (Control) switched to D/C/F/TAF treatment and continued for up to Week 96 during open-label, single-group treatment phase. After Week 96, subjects were given the opportunity to continue D/C/F/TAF treatment until the D/C/F/TAF FDC tablet became commercially available.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 July 2015	The overall reason for the amendment was that, following Health Authority feedback, the creatinine clearance threshold for eligibility was increased from 50 to 70 milliliters per minute (mL/min) and subjects previously treated with post-exposure prophylaxis and/or pre-exposure prophylaxis were no longer allowed in the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
