

Clinical trial results:

Safety and Effect of LEO 90100 aerosol foam on the HPA Axis and Calcium Metabolism in Adolescent Subjects (Aged 12 to < 17 Years) with Plaque Psoriasis

A phase 2 trial evaluating the safety and efficacy of once daily topical treatment with LEO 90100 aerosol foam in adolescent subjects with plaque psoriasis

An international, multi-centre, prospective, open-label, non-controlled, single-group, 4-week trial in adolescent subjects with plaque psoriasis

Summary

EudraCT number	2015-000839-33
Trial protocol	NL PL
Global end of trial date	28 March 2018

Results information

Result version number	v2
This version publication date	30 November 2018
First version publication date	14 October 2018
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Editorial changes made to align with comments received from clinicaltrials.gov: <ul style="list-style-type: none">- Endpoint titles were edited for clarity.- Clarification of 'Treatment Success' for PGA and SGA.- Explanation of why number of subjects analysed in efficacy endpoints differ from number of subjects in the full analysis set.- Explanation the Psoriasis Area and Severity Index score and range.- Explanation of itch VAS scale.- Clarification of AE reporting time frame.

Analysis stage	Final
Date of interim/final analysis	22 June 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 March 2018
Global end of trial reached?	Yes
Global end of trial date	28 March 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to evaluate the safety of once daily use of LEO 90100 in adolescent subjects (aged 12 to < 17 years) with plaque psoriasis on the body and scalp.

Protection of trial subjects:

This clinical trial was conducted in accordance with the revision current at the start of the trial of the World Medical Association's Declaration of Helsinki – Ethical Principles for Medical Research Involving Human Subjects. All subjects received written and verbal information concerning the clinical trial. This information emphasised that participation in the clinical trial was voluntary and that the subject could withdraw from the clinical trial at any time and for any reason. All subjects and their legally acceptable representatives were given an opportunity to ask questions and were given sufficient time to consider before consenting. Subjects who were not of legal age gave assent to their participation in the trial. The subject's and legally acceptable representatives' signed and dated informed consent and assent to participate in the clinical trial were obtained prior to any trial related activities being carried out in accordance with ICH Good Clinical Practice (GCP) Section 4.8 and all applicable laws and regulations. Overdosage with calcipotriol may be associated with hypercalcaemia, and clinically important hypercalcaemia could be managed at the investigator's discretion with rehydration, biphosphonate administration or according to local instructions. Overdosage with betamethasone dipropionate may result in suppression of the pituitary adrenal function, and could be treated symptomatically at the investigator's discretion. There is a risk of allergic hypersensitivity reactions with administration of Cortrosyn®/Synacthen®. Prior to the injection of Cortrosyn®/Synacthen®, the physician administering the injection was prepared to treat any possible hypersensitivity reactions.

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	Poland: 71
Country: Number of subjects enrolled	Romania: 34
Country: Number of subjects enrolled	United States: 3
Worldwide total number of subjects	117
EEA total number of subjects	114

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	117
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Male/female 12-17 years, psoriasis on body and scalp

Subj. not performing HPA axis test: Plaque psoriasis $\geq 2\%$ BSA, $\geq 10\%$ of scalp, \geq mild severity

Subj. performing HPA axis test: Plaque psoriasis $\geq 10\%$ BSA, $\geq 20\%$ of scalp, \geq moderate severity, normal HPA-axis function

117 screened. 106 assigned to treatment, 8 screening failures, 3 withdrew consent

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	LEO 90100
-----------	-----------

Arm description:

This arm contains all 106 subjects that were assigned to treatment and constitutes the full analysis set and the safety analysis set. 33 subjects in this arm performed additional baseline and post-baseline HPA axis assessments and constitute the per protocol analysis set.

Arm type	Experimental
Investigational medicinal product name	LEO 90100
Investigational medicinal product code	
Other name	Enstilar®
Pharmaceutical forms	Cutaneous foam
Routes of administration	Topical use

Dosage and administration details:

LEO 90100 is formulated as an aerosol foam formulation containing calcipotriol 50 mcg/g (as hydrate) and betamethasone 0.5 mg/g (as dipropionate). LEO 90100 was applied once daily to body and scalp psoriasis lesions. Subjects in the HPA axis cohort were to continue the treatment, even if their lesions had cleared at Week 2. Subjects in the non-HPA axis cohort were allowed to discontinue treatment if the psoriasis lesions had cleared at Week 2 (according to the investigator), but should stay in the trial. During periods of discontinuation of treatment, those cleared subjects were to restart treatment if the psoriasis re-appeared.

Number of subjects in period 1^[1]	LEO 90100
Started	106
Completed	103
Not completed	3
Consent withdrawn by subject	3

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number of enrolled subjects include all subjects who provided consent for participation in the trial and were screened. Out of the 117 subjects who were screened, 106 subjects met all inclusion criteria and none of the exclusion criteria, and were assigned to treatment. These 106

subjects are included in the data for the baseline period.

Subject analysis sets

Subject analysis set title	Full analysis set
Subject analysis set type	Full analysis

Subject analysis set description:

All subjects assigned to treatment are included in the full analysis set and were analysed for efficacy. 106 subjects were assigned to the treatment. Thus the full analysis set consists of 106 subjects.

Subject analysis set title	Safety analysis set
Subject analysis set type	Safety analysis

Subject analysis set description:

The safety analysis set is defined by excluding subjects from the full analysis set who either received no treatment with the IMP and/or for whom no post-baseline safety evaluations are available. 106 subjects were assigned to treatment and had safety information collected. For 1 subject it was unknown whether any IMP was applied, but since it could neither be confirmed nor denied that the subject did not apply IMP, this subject was included in the safety analysis set. Therefore, the safety analysis set comprised 106 subjects.

The analysis of the results from the ACTH-challenge test is based on the per protocol analysis set and not on the safety analysis set.

Subject analysis set title	Per protocol analysis set
Subject analysis set type	Per protocol

Subject analysis set description:

For the analysis of the results from the ACTH-challenge test, a per protocol analysis set was defined by including subjects undergoing HPA axis assessments from the full analysis set, however excluding the subjects who:

- Received no treatment with the IMP
- Provided no results for the ACTH-challenge test at Week 4
- And/or do not fulfil inclusion criterion 17 concerning evidence of normal adrenal function at baseline: Normal HPA axis function at SV2 (serum cortisol concentration above 5 mcg/dl before ACTH challenge and serum cortisol concentration above 18 mcg/dl 30 minutes after ACTH challenge).

A total of 34 subjects in the full analysis set were assigned to perform the ACTH challenge test. 33 subjects provided data for the ACTH-challenge, thus the per protocol analysis set comprises 33 subjects.

Subject analysis set title	24-hour urine HPA set
Subject analysis set type	Sub-group analysis

Subject analysis set description:

24-hour urine samples were only collected from subjects in the HPA axis cohort. All 34 subjects in the HPA axis cohort were included in this analysis set, referred to as the '24-hour urine HPA set'.

Subject analysis set title	Spot urine non-HPA set
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Some analytes in the spot urine samples (calcium, phosphate, and creatinine) were only to be measured in subjects in the non-HPA axis cohort. This analysis set is called 'spot urine non-HPA set' and comprised 72 subjects.

End point title	Percentage change in PASI from baseline to Week 4
End point description:	
Percentage change in Psoriasis area and severity index (PASI) score from baseline to end of treatment, defined as the last value recorded up to and including Week 8. Psoriasis area and severity index (PASI) assesses extent and severity of clinical signs of psoriasis vulgaris. Body surface is divided in 4 areas: head (incl. neck), arms (incl. hands), trunk (incl. flexures) and legs (incl. buttocks and feet). Each area is scored from 0-6 for extent of psoriasis and from 0-4 for redness, thickness, and scaliness, and an area PASI score is calculated. The total PASI score is calculated from each area's score. The PASI score ranges from 0 (clear skin) to 72 (maximum disease), a PASI score higher than 10 generally corresponds to moderate-to-severe disease.

Reporting group title	All subjects
-----------------------	--------------

Reporting group description:

This arm contains all 106 subjects that were assigned to treatment and constitutes the safety analysis set.

Serious adverse events	All subjects		
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 106 (0.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	All subjects		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	22 / 106 (20.75%)		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Haemangioma of liver			
subjects affected / exposed	1 / 106 (0.94%)		
occurrences (all)	1		
Injury, poisoning and procedural complications			
Arthropod bite			
subjects affected / exposed	1 / 106 (0.94%)		
occurrences (all)	1		
Surgical and medical procedures			

Skin neoplasm excision subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
General disorders and administration site conditions Application site pain subjects affected / exposed occurrences (all) Product physical consistency issue subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1 1 / 106 (0.94%) 1		
Eye disorders Myopia subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
Skin and subcutaneous tissue disorders Acne subjects affected / exposed occurrences (all) Erythema subjects affected / exposed occurrences (all) Pruritus generalised subjects affected / exposed occurrences (all) Skin reaction subjects affected / exposed occurrences (all)	2 / 106 (1.89%) 2 1 / 106 (0.94%) 1 1 / 106 (0.94%) 1 1 / 106 (0.94%) 1		
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all) Myalgia subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1 1 / 106 (0.94%) 1		
Infections and infestations			

Upper respiratory tract infection subjects affected / exposed occurrences (all)	8 / 106 (7.55%) 8		
Nasopharyngitis subjects affected / exposed occurrences (all)	4 / 106 (3.77%) 4		
Folliculitis subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
Impetigo subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
Oral herpes subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
Pharyngitis subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
Pulpitis dental subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
Rhinitis subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		
Psoriasis subjects affected / exposed occurrences (all)	1 / 106 (0.94%) 1		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 July 2015	The amendment was triggered by comments received from the FDA. <ul style="list-style-type: none">- Local safety and tolerability assessment was added.- The use of Synacthen® was added (European sites only)- It was specified that subjects in the HPA axis cohort should continue their treatment even if their lesions had cleared at Week 2.- A physical examination was added at Week 4 and at early withdrawal.- Vital signs were added at baseline and Week 2- Temperature (oral or ear) was added to vital signs.- The PGA scale (Table 12) was updated to also include levels 0 (clear) and 1 (almost clear).
18 January 2016	This amendment was made to correct several minor errors. The following other important changes were made: <ul style="list-style-type: none">- It was specified that Synacthen® was provided to the sites in Poland and Romania.- It was specified that cortisol was to be measured at SV2 and Week 4.
14 March 2016	This amendment was made to correct some minor errors.
29 August 2016	This amendment was made to correct an error, namely that serum cortisol analysis was mandated for all subjects. This measurement was only required for subjects in the HPA axis cohort. The following other important changes were made: <ul style="list-style-type: none">- A separate schedule of trial procedures was added for subjects in the non-HPA axis cohort.- It was specified that LEO 90100 has different storage conditions in EU and the US (according to approved label).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
