#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 June 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 March 2019
Global end of trial reached?	Yes
Global end of trial date	06 June 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This was a study of pembrolizumab as first-line treatment for participants with advanced gastric or gastroesophageal junction (GEJ) adenocarcinoma. Participants whose tumors expressed programmed death-ligand 1 (PD-L1) were randomly assigned to one of the three treatment arms of the study: pembrolizumab as monotherapy [pembro mono], pembrolizumab plus standard of care (SOC) chemotherapy with cisplatin plus 5-fluorouracil (5-FU) or capecitabine [pembro combo], or placebo plus SOC chemotherapy with cisplatin plus 5-fluorouracil (5-FU) or capecitabine [SOC].

The primary hypotheses compared pembrolizumab plus SOC chemotherapy OR pembrolizumab monotherapy with SOC chemotherapy alone in terms of Progression-free Survival (PFS) and Overall Survival (OS) in participants with PD-L1 Combined Positive Score (CPS)  $\geq 1$  and participants with PD-L1 CPS  $\geq 10$ .

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 July 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 9
Country: Number of subjects enrolled	Australia: 19
Country: Number of subjects enrolled	Austria: 6
Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Brazil: 33
Country: Number of subjects enrolled	Chile: 44
Country: Number of subjects enrolled	Colombia: 11
Country: Number of subjects enrolled	Czechia: 19
Country: Number of subjects enrolled	Germany: 19
Country: Number of subjects enrolled	Guatemala: 22
Country: Number of subjects enrolled	Hong Kong: 7
Country: Number of subjects enrolled	Hungary: 28
Country: Number of subjects enrolled	Italy: 22
Country: Number of subjects enrolled	Japan: 103

Country: Number of subjects enrolled	Korea, Republic of: 50
Country: Number of subjects enrolled	Latvia: 23
Country: Number of subjects enrolled	Lithuania: 14
Country: Number of subjects enrolled	Mexico: 14
Country: Number of subjects enrolled	Netherlands: 7
Country: Number of subjects enrolled	New Zealand: 3
Country: Number of subjects enrolled	Poland: 44
Country: Number of subjects enrolled	Russian Federation: 64
Country: Number of subjects enrolled	South Africa: 21
Country: Number of subjects enrolled	Spain: 34
Country: Number of subjects enrolled	Switzerland: 15
Country: Number of subjects enrolled	Taiwan: 27
Country: Number of subjects enrolled	United Kingdom: 25
Country: Number of subjects enrolled	United States: 69
Worldwide total number of subjects	763
EEA total number of subjects	227

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	445
From 65 to 84 years	315
85 years and over	3

## Subject disposition

### Recruitment

Recruitment details:

Participants with advanced gastric or gastroesophageal junction (GEJ) adenocarcinoma who were programmed death-ligand 1 (PD-L1)-positive (Combined Positive Score [CPS]  $\geq 1$ ) and human epidermal growth factor receptor 2 (HER2/neu)-negative were recruited to the study.

### Pre-assignment

Screening details:

763 were randomized 1:1:1 to pembrolizumab monotherapy (pembro mono), pembrolizumab plus standard of care (SOC) chemotherapy (pembro combo), or placebo plus SOC. Per protocol, response/progression or adverse events (AEs) occurring during second course not counted towards efficacy outcome measures or safety outcome measures, respectively.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

For pembrolizumab (monotherapy); the participant, the trial site personnel, the Sponsor and/or designee were not blinded to this treatment arm since only one type of trial medication was administered on this arm.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Pembrolizumab Monotherapy (Pembro Mono)

Arm description:

Participants received pembrolizumab 200 mg intravenously (IV) on Day 1 of each 3-week cycle (Q3W). Eligible participants who stopped the initial course of pembrolizumab with Stable Disease (SD) or better but progressed after discontinuation may have been able to initiate a second course of pembrolizumab for up to 17 cycles (up to approximately 1 additional year) at the investigator's discretion.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	KEYTRUDA®, MK-3475
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion, Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg/kg IV, administered Q3W

<b>Arm title</b>	Pembrolizumab + SOC Chemotherapy (Pembro Combo)
------------------	---

Arm description:

Participants received pembrolizumab 200 mg Q3W plus cisplatin 80 mg/m<sup>2</sup> Q3W plus 5-fluorouracil (5-FU) 800 mg/m<sup>2</sup>/day IV infusion on Days 1-5 Q3W. Capecitabine 1000 mg/m<sup>2</sup> twice a day (BID) on Days 1-14 Q3W could be substituted for 5-FU per local guidelines. Eligible participants who stopped the initial course of pembrolizumab with Stable Disease (SD) or better but progressed after discontinuation may have been able to initiate a second course of pembrolizumab for up to 17 cycles (up to approximately 1 additional year) at the investigator's discretion.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	KEYTRUDA®, MK-3475
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion, Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: 200 mg/kg IV, administered Q3W	
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Capecitabine 1000 mg/m <sup>2</sup> twice daily by oral tablet on Day 1-14 of each 3-week cycle.	
Investigational medicinal product name	5-FU
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: 5-FU 800 mg/m <sup>2</sup> /day IV continuous from Day 1-5 of each 3-week cycle.	
Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: 80 mg/m <sup>2</sup> IV on Day 1 of each week in 3-week cycles (6 cycle maximum per local country guidelines).	
<b>Arm title</b>	Placebo + SOC Chemotherapy (SOC)
Arm description: Participants received placebo IV Q3W plus cisplatin 80 mg/m <sup>2</sup> Q3W plus 5-FU 800 mg/m <sup>2</sup> /day IV infusion on Days 1-5 Q3W. Capecitabine 1000 mg/m <sup>2</sup> BID on Days 1-14 Q3W could be substituted for 5-FU per local guidelines.	
Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details: Normal saline IV on Day 1 of each week in 3-week cycles for up to 35 cycles (approximately 2 years).	
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Capecitabine 1000 mg/m <sup>2</sup> twice daily by oral tablet on Day 1-14 of each 3-week cycle.	
Investigational medicinal product name	5-FU
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Solution for infusion

## End points

### End points reporting groups

Reporting group title	Pembrolizumab Monotherapy (Pembro Mono)
Reporting group description: Participants received pembrolizumab 200 mg intravenously (IV) on Day 1 of each 3-week cycle (Q3W). Eligible participants who stopped the initial course of pembrolizumab with Stable Disease (SD) or better but progressed after discontinuation may have been able to initiate a second course of pembrolizumab for up to 17 cycles (up to approximately 1 additional year) at the investigator's discretion.	
Reporting group title	Pembrolizumab + SOC Chemotherapy (Pembro Combo)
Reporting group description: Participants received pembrolizumab 200 mg Q3W plus cisplatin 80 mg/m <sup>2</sup> Q3W plus 5-fluorouracil (5-FU) 800 mg/m <sup>2</sup> /day IV infusion on Days 1-5 Q3W. Capecitabine 1000 mg/m <sup>2</sup> twice a day (BID) on Days 1-14 Q3W could be substituted for 5-FU per local guidelines. Eligible participants who stopped the initial course of pembrolizumab with Stable Disease (SD) or better but progressed after discontinuation may have been able to initiate a second course of pembrolizumab for up to 17 cycles (up to approximately 1 additional year) at the investigator's discretion.	
Reporting group title	Placebo + SOC Chemotherapy (SOC)
Reporting group description: Participants received placebo IV Q3W plus cisplatin 80 mg/m <sup>2</sup> Q3W plus 5-FU 800 mg/m <sup>2</sup> /day IV infusion on Days 1-5 Q3W. Capecitabine 1000 mg/m <sup>2</sup> BID on Days 1-14 Q3W could be substituted for 5-FU per local guidelines.	

### **Primary: Pembro Combo vs SOC: Progression Free Survival (PFS) per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) by Blinded Independent Central Review (BICR) in Participants With PD-L1 CPS ≥1 (All Participants)**

End point title	Pembro Combo vs SOC: Progression Free Survival (PFS) per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) by Blinded Independent Central Review (BICR) in Participants With PD-L1 CPS ≥1 (All Participants)
End point description: PFS was defined as the time from randomization to the first documented progressive disease (PD) per RECIST 1.1 based on BICR, or death due to any cause, whichever occurred first. Per RECIST 1.1, PD was defined as ≥20% increase in the sum of diameters of target lesions. In addition to the relative increase of 20%, the sum had to demonstrate an absolute increase of ≥5 mm. The appearance of one or more new lesions was also considered PD.  Per protocol, PFS in the pembro combo arm was compared to the SOC arm as a pre-specified primary analysis of the Intent-To-Treat (ITT) population. PFS is reported here for all participants in the pembro combo arm and SOC arm who were PD-L1 CPS ≥1 (all participants). Per protocol, PFS was compared separately between CPS ≥1 participants of the pembro mono arm and SOC arm and is presented later in the record.  All CPS ≥1 participants in the ITT population randomized to the pembro combo arm and SOC arm were analyzed.	
End point type	Primary
End point timeframe: Up to approximately 36 months	

End point values	Pembrolizumab Monotherapy (Pembro Mono)	Pembrolizumab + SOC Chemotherapy (Pembro Combo)	Placebo + SOC Chemotherapy (SOC)	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	0 <sup>[1]</sup>	257	250	
Units: Months				
median (confidence interval 95%)	( to )	6.9 (5.7 to 7.3)	6.4 (5.7 to 7.0)	

Notes:

[1] - The pembro mono arm was compared to the SOC arm separately and not included in this analysis.

## Statistical analyses

<b>Statistical analysis title</b>	PFS: Pembro Combo vs SOC, CPS $\geq 1$
Statistical analysis description:	
PFS in CPS $\geq 1$ participants of the pembro combo arm was compared to PFS in CPS $\geq 1$ participants of the SOC arm to address the first primary hypothesis (superiority to SOC). The comparison was based on a Cox regression model with Efron's method of tie handling with treatment as a covariate with stratification according to geographic region, disease status, and fluoropyrimidine treatment.	
Comparison groups	Pembrolizumab + SOC Chemotherapy (Pembro Combo) v Placebo + SOC Chemotherapy (SOC)

### Primary: Pembro Mono vs SOC: OS in Participants With PD-L1 CPS ≥10

End point title	Pembro Mono vs SOC: OS in Participants With PD-L1 CPS ≥10
-----------------	---

End point description:

OS was defined as the time from randomization to death due to any cause. Participants without documented death at the time of the final analysis were censored at the date of the last follow-up. Per protocol, OS in the pembro mono arm was compared to the SOC arm as a pre-specified primary analysis of the ITT population. OS is reported here for all participants in the pembro mono arm and SOC arm who were PD-L1 CPS ≥10. Per protocol, OS was compared separately between CPS ≥10 participants of the pembro combo arm and SOC arm and is presented earlier in the record. All CPS ≥10 participants in the ITT population randomized to the pembro mono arm and SOC arm were analyzed.

End point type	Primary

### Secondary: Pembro Mono vs SOC: DOR per RECIST 1.1 by BICR in Participants With PD-L1 CPS ≥1 (All Participants)

End point title	Pembro Mono vs SOC: DOR per RECIST 1.1 by BICR in Participants With PD-L1 CPS ≥1 (All Participants)
-----------------	---

End point description:

DOR was defined as the time from first documented evidence of confirmed CR or PR until PD or death, whichever occurred first. DOR for participants who had not progressed or died at the time of analysis was censored at the date of their last tumor assessment. Per RECIST 1.1, PD was defined as at least a 20% increase in the sum of diameters of target lesions. In addition to the relative increase of 20%, the sum had to demonstrate an absolute increase of ≥5 mm. The appearance of one or more new lesions was also considered PD. All CPS ≥1 participants in the ITT population randomized to the pembro mono arm and SOC arm and who demonstrated a confirmed CR or PR were analyzed. Values of 9999 indicate that the median DOR and DOR range lower and upper limits were not reached (no progressive disease by time of last disease assessment). Per protocol, DOR was compared separately between CPS ≥1 responders of the pembro combo arm and SOC arm and is presented earlier in the record.

An AE could therefore be any unfavourable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product or protocol-specified procedure, whether or not considered related to the medicinal product or protocol-specified procedure. Any worsening of a pre-existing condition that was temporally associated with the use of the Sponsor's product was also an adverse event. The number of participants who discontinued study treatment due to an AE was reported for each arm according to the treatment received. All randomized participants who received at least 1 dose of trial treatment were analyzed.

**End point type**

Secondary

**End point timeframe:**

Up to approximately 30 months

<b>End point values</b>	Pembrolizumab Monotherapy (Pembro Mono)	Pembrolizumab + SOC Chemotherapy (Pembro Combo)	Placebo + SOC Chemotherapy (SOC)

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to approximately 78 months

Adverse event reporting additional description:

All-Cause Mortality reported for all randomized participants. Serious AEs and Other AEs were reported for all randomized participants who received at least 1 dose of study treatment. Per protocol, MedDRA preferred terms "Neoplasm progression", "Malignant neoplasm progression" and "Disease progression" not related to study drug are excluded as AEs.

Assessment type	Systematic

### Reporting groups

Reporting group title	Pembrolizumab Monotherapy (Pembro Mono) First Course
-----------------------	--

Reporting group description:

Participants received pembrolizumab 200 mg IV Q3W.

Reporting group title	Pembrolizumab + SOC Chemotherapy (Pembro Combo)-First Course
-----------------------	--

Reporting group description:

Participants received pembrolizumab 200 mg Q3W plus cisplatin 80 mg/m<sup>2</sup> Q3W plus 5-FU 800 mg/m<sup>2</sup>/day IV infusion on Days 1-5 Q3W. Capecitabine 1000 mg/m<sup>2</sup> twice a day (BID) on Days 1-14 Q3W could be substituted for 5-FU per local guidelines.

Reporting group title	Pembrolizumab + SOC Chemotherapy-Second Course
-----------------------	--

Reporting group description:

Eligible participants who stopped the initial course of pembrolizumab (200 mg IV Q3W for up to 35 treatments [approximately 2 years]) administered in combination with SOC chemotherapy, and experienced Stable Disease (SD) or better but progressed after discontinuation initiated a second course of pembrolizumab at the investigator's discretion for up to 17 cycles (up to approximately 1 additional year).

Reporting group title	Pembrolizumab Monotherapy Second Course
-----------------------	---

Reporting group description:

Eligible participants who stopped the initial course of pembrolizumab (200 mg IV Q3W for up to 35 treatments [approximately 2 years]) with Stable Disease (SD) or better but progressed after discontinuation initiated a second course of pembrolizumab at the investigator's discretion for up to 17 cycles (up to approximately 1 additional year).

Reporting group title	Placebo + SOC Chemotherapy (SOC)-First Course
-----------------------	---

Reporting group description:

Participants received placebo IV Q3W plus cisplatin 80 mg/m<sup>2</sup> Q3W plus 5-FU 800 mg/m<sup>2</sup>/day IV infusion on Days 1-5 Q3W. Capecitabine 1000 mg/m<sup>2</sup> BID on Days 1-14 Q3W could be substituted for 5-FU per local guidelines.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 July 2016	Major changes of Amendment (AM) 3 include clarification of Inclusion and Exclusion Criteria and revision of Withdrawal/Discontinuation Criteria.
06 October 2016	Major changes of AM 5 include revision of Inclusion and Exclusion Criteria.
08 March 2017	Major changes of AM 6 include removing primary PFS hypothesis comparing pembrolizumab monotherapy to SOC, and adding primary OS hypothesis evaluating non-inferiority of pembrolizumab monotherapy. Secondary ORR hypothesis comparing pembrolizumab plus SOC vs. SOC was added.
15 January 2018	Major changes of AM 8 included revising dose modification language and adding survival status follow-up to the study.
11 May 2018	Major changes of AM 10 included the addition of 2 primary hypotheses for OS: pembrolizumab plus SOC vs. SOC, and pembrolizumab monotherapy vs. SOC in participants with CPS $\geq$ 10.
22 January 2019	Major changes of AM 12 included revision of Prohibited Concomitant Medication language and safety follow-up language.
02 August 2021	Major changes of AM 14 included the revision of sections of the protocol including the Trial Summary and Study Diagram to include study extension language, and updating the Dose Modification and Toxicity Management Guidelines for immune response AEs per Food and Drug Administration request.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
