Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 June 2007
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 June 2007
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of the study is to investigate the clinical benefit of switching children with ADHD (attention deficit/hyperactive disorder) from immediate-release methylphenidate (IR-MPH) to Osmotic controlled-release oral delivery system (OROS)-methylphenidate under the correct dosage conversion scheme.

Protection of trial subjects:

Safety was evaluated based on the following variables: adverse events and serious adverse events, measurement of vital signs and the performance of physical examinations. Barkley's Side Effect Rating Scale (Barkley's SERS) was used to measure side effects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 September 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Taiwan: 507
Worldwide total number of subjects	507
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	364
Adolescents (12-17 years)	143
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted from 18 September 2006 to 28 June 2007 and recruited subjects from 6 clinical centers.

Pre-assignment

Screening details:

Total 521 subjects were enrolled in the study and 439 subjects completed the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	OROS Methylphenidate
-----------	----------------------

Arm description:

Subjects receiving IR-MPH therapy at daily dosage of less than or equal to (\leq) 15 milligram (mg) per day, were switched to receive OROS methylphenidate 18mg once daily orally up to 6 weeks. Subjects receiving IR-MPH therapy at a daily dosage of greater than >15 mg per day and ≤ 30 mg per day, received OROS methylphenidate 36 mg once daily orally up to 6 weeks. Subjects receiving IR-MPH >30 mg per day, received OROS methylphenidate 54 mg once daily orally up to 6 weeks. Dose of OROS methylphenidate was up titrated or down titrated based on the optimal response and adverse event. The maximum daily dose of OROS methylphenidate was 54 mg per day. The final titration dose of OROS methylphenidate was continued for next 4 weeks.

Arm type	Experimental
Investigational medicinal product name	OROS Methylphenidate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

OROS Methylphenidate in a dose of 18 mg or 36 mg or 54 mg once daily orally.

Number of subjects in period 1	OROS Methylphenidate
Started	507
Completed	439
Not completed	68
Consent withdrawn by subject	21
Adverse event, non-fatal	24
Other	1
Lost to follow-up	12
Lack of efficacy	9
Protocol deviation	1

Primary: Percentage of Subjects With Optimal Response at Week 10

End point title	Percentage of Subjects With Optimal Response at Week 10 ^[1]
-----------------	--

End point description:

Optimal response is defined as a score of 0 or 1 on each of the first 18 Attention-deficit/hyperactivity disorder (ADHD) items in Swanson, Nolan and Pelham-Fourth Edition (SNAP-IV) rating scale. SNAP-IV rating scale consists of 18 ADHD items and 8 Oppositional Defiant Disorder (ODD) items. Each item was scored for severity on a 4-point scale ranging from 0-3, where 0=not at all and 3=very much.

End point type	Primary
----------------	---------

End point timeframe:

Week 10

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not reported for this endpoint as inferential analysis was not planned.

Secondary: Change From Baseline in Clinical Global Impression (CGI) Scale Score

End point title	Change From Baseline in Clinical Global Impression (CGI) Scale Score
-----------------	--

End point description:

The Clinical Global Impression Severity (CGI-S) rating scale is a 7 point global assessment that measures the clinician's impression of the severity of illness exhibited by a participant. A rating of 1 is equivalent to "Normal, not at all ill" and a rating of 7 is equivalent to "Among the most extremely ill participants". Higher scores indicate worsening. CGI Improvement scale is a 7 point scale that requires the clinician to assess how much the subject's illness has improved or worsened relative to a baseline state at the beginning of the intervention: 1=very much improved; 2=much improved; 3=minimally improved; 4=no change; 5=minimally worse; 6=much worse; 7=very much worse.
