

## Clinical trial results:

**A randomized, double-blind, placebo-controlled multicenter study of secukinumab 150 mg in patients with active nonradiographic axial spondyloarthritis to evaluate the safety, tolerability and efficacy up to 2 years, followed by an optional phase of either 150 mg or 300 mg randomized dose escalation for up to another 2 years**

### Summary

EudraCT number	2015-001106-33
Trial protocol	DE GB AT ES NL HU PT NO SE BE BG FR CZ IT
Global end of trial date	11 March 2021

### Results information

Result version number	v1
This version publication date	13 December 2021
First version publication date	13 December 2021

### Trial information

#### Trial identification

Sponsor protocol code	CAIN457H2315
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02696031

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 July 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 March 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to demonstrate that secukinumab 150 mg s.c. (without load) at Week 52 was superior to placebo in TNF-alpha inhibitor naïve (TNFi-naïve) patients with active nr-axSpA based on the proportion of patients achieving an ASAS40 response.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 April 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 27
Country: Number of subjects enrolled	Austria: 3
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Bulgaria: 7
Country: Number of subjects enrolled	Czechia: 71
Country: Number of subjects enrolled	France: 19
Country: Number of subjects enrolled	Germany: 52
Country: Number of subjects enrolled	United Kingdom: 24
Country: Number of subjects enrolled	Hungary: 21
Country: Number of subjects enrolled	Israel: 11
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	Japan: 13
Country: Number of subjects enrolled	Korea, Republic of: 2
Country: Number of subjects enrolled	Mexico: 6
Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	Norway: 8
Country: Number of subjects enrolled	Poland: 65
Country: Number of subjects enrolled	Portugal: 14
Country: Number of subjects enrolled	Russian Federation: 54

Country: Number of subjects enrolled	Spain: 72
Country: Number of subjects enrolled	Sweden: 7
Country: Number of subjects enrolled	Switzerland: 8
Country: Number of subjects enrolled	Turkey: 2
Country: Number of subjects enrolled	United States: 36
Worldwide total number of subjects	555
EEA total number of subjects	372

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	546
From 65 to 84 years	9
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 1583 patients were screened for this study, of which 555 patients (35.1%) were randomized. Overall, 1028 patients (64.9%) discontinued prior to screening phase completion, most due to screen failure (1000 patients, 63.2%).

### Pre-assignment

Screening details:

555 participants were planned and also analyzed.

### Period 1

Period 1 title	Up to Week 104
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Blinding implementation details:

This was a blinded placebo controlled study up to week 52. All patients received secukinumab 150 mg as open-label treatment from Week 52 up to Week 100, unless they had discontinued study treatment.

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Secukinumab, Load, Core Phase
------------------	-------------------------------

Arm description:

AIN457 150 mg s.c. load, Core Phase

Arm type	Experimental
Investigational medicinal product name	secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

secukinumab 150 mg Load

<b>Arm title</b>	Secukinumab, No Load, Core Phase
------------------	----------------------------------

Arm description:

AIN457 150 mg s.c. no load, Core Phase

Arm type	Experimental
Investigational medicinal product name	secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

secukinumab 150 mg No Load

<b>Arm title</b>	Placebo, Core Phase
------------------	---------------------

Arm description:

Placebo s.c., Core Phase

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo

Pregnancy	-	2	1
Lost to follow-up	2	3	1
Lack of efficacy	13	12	11
Protocol deviation	1	-	-

## Period 2

Period 2 title	Extension phase from wk 104 to wk 208
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Blinding implementation details:

At Week 104, all patients who finished the core phase according to the protocol were asked to continue in an optional, exploratory extension phase. Patients who achieved ASAS20 response at Week 104 (Core Phase Responders) were randomized to the treatment groups, which were blinded.

## Arms

Are arms mutually exclusive?	Yes
Arm title	AIN457 150 mg Extension phase
Arm description: AIN457 150 mg Core Phase Responders who were rerandomized at week 104 to the 150 mg in the Extension phase (from Week 104 to week 208).	
Arm type	Experimental

Investigational medicinal product name	secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details: secukinumab 150 mg	
<b>Arm title</b>	AIN457 300 mg Extension phase

Arm description:

AIN457 150 mg Core Phase Responders who were rerandomized at week 104 to the 300 mg in the Extension phase (from Week 104 to week 208).

Arm type	Experimental
Investigational medicinal product name	secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details: secukinumab 300 mg	
<b>Arm title</b>	AIN457 300 mg Open Label Extension phase

Arm description:

AIN457 150 mg Open Label Core Phase Non-Responders who were assigned at week 104 to the 300 mg Open Label in the Extension phase (from Week 104 to week 208).

Arm type	Experimental
Investigational medicinal product name	secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use
Dosage and administration details: secukinumab 300 mg	

Number of subjects in period 2 <sup>[1]</sup>	AIN457 150 mg Extension phase	AIN457 300 mg Extension phase	AIN457 300 mg Open Label Extension phase
Started	147	147	78
Completed	137	132	72
Not completed	10	15	6
Consent withdrawn by subject	6	8	2
Physician decision	1	1	-
Adverse event, non-fatal	1	4	1
Non-compliance with study treatment	1	-	-
Lost to follow-up	-	1	-
Lack of efficacy	1	1	3

---

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: The arms are different in the core phase vs the extension phase.

### Primary: The proportion of TNF naive participants who achieved an Assessment of Spondylo Arthritis International Society (ASAS) 40 response at week 16

End point title	The proportion of TNF naive participants who achieved an Assessment of Spondylo Arthritis International Society (ASAS) 40 response at week 16
End point description: Assessment of SpondyloArthritis International Society criteria (ASAS) consist of 6 domains (4 main and 2 additional assessment domains): 1. Patient's global assessment measured on a visual analog scale (VAS); 2. Patient's assessment of back pain, measured on a VAS; 3. Function represented by Bath Ankylosing Spondylitis Functional Index (BASFI) average of 10 questions as measured by VAS; 4. Inflammation represented by mean duration and severity of morning stiffness, on the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) as measured by VAS; 5. Spinal mobility represented by the Bath Ankylosing Spondylitis Metrology Index (BASMI) lateral spinal flexion assessment; 6. C-reactive protein (acute phase reactant). ASAS40 response is defined as an improvement of $\geq 40\%$ and $\geq 2$ units on a scale of 10 in at least three of the four ASAS main domains and no worsening at all in the remaining domain. A higher score on the VAS signifies higher severity.

## Secondary: The proportion of participants who achieved an Assessment of SpondyloArthritis International Society Partial Remission (ASAS PR)

End point title	The proportion of participants who achieved an Assessment of SpondyloArthritis International Society Partial Remission (ASAS PR)
-----------------	--

End point description:

Assessment of SpondyloArthritis International Society criteria (ASAS) consist of 6 domains (4 main and 2 additional assessment domains): 1. Patient's global assessment measured on a visual analog scale (VAS); 2. Patient's assessment of back pain, measured on a VAS; 3. Function represented by Bath Ankylosing Spondylitis Functional Index (BASFI) average of 10 questions as measured by VAS; 4. Inflammation represented by mean duration and severity of morning stiffness, on the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) as measured by VAS; 5. Spinal mobility represented by the Bath Ankylosing Spondylitis Metrology Index (BASMI) lateral spinal flexion assessment; 6. C-reactive protein (acute phase reactant). The ASAS partial remission criteria are defined as a value not above 2 units in each of the four main domains on a scale of 10. A higher score on the VAS signifies higher severity.

## Secondary: Change in Bath Ankylosing Spondylitis Functional Index (BASFI)

End point title	Change in Bath Ankylosing Spondylitis Functional Index (BASFI)
-----------------	--

End point description:

The Bath Ankylosing Spondylitis Functional Index (BASFI) is a set of 10 questions designed to determine the degree of functional limitation in those subjects with AS. The ten questions were chosen with a major input from subjects with AS. The first 8 questions consider activities related to functional anatomy. The final 2 questions assess the subjects' ability to cope with everyday life. A 100 mm visual analog scale (VAS) is used to answer the questions. The mean of the ten questions gives the BASFI score – a value between 0 and 10. (0 being no problem and 10 being the worst problem, captured as a continuous visual analog scale (VAS)). A higher score on the VAS signifies higher severity.

## Secondary: Change in Short Form-36 Physical Component Summary (SF-36 PCS)

End point title	Change in Short Form-36 Physical Component Summary (SF-36 PCS)
-----------------	--

End point description:

The Short Form-36 Physical Component Summary (SF-36 PCS) is an instrument to measure health-related quality of life among healthy patients and patients with acute and chronic conditions. It consists of eight subscales (domains) that can be scored individually: Physical Functioning, Role-Physical, Bodily Pain, General Health, Vitality, Social Functioning, Role- Emotional, and Mental Health. Two overall summary scores, the Physical Component Summary (PCS) and the Mental Component Summary (MCS) also can be computed. The eight domains are based on a scale from 0-100 while PCS and MCS are norm-based scores with a mean of 50 and a standard deviation of 10. Higher scores indicate a higher level of functioning. A positive change from baseline score indicates an improvement.

P-value	< 0.0001 <sup>[38]</sup>
Method	Wilcoxon (Mann-Whitney)
Parameter estimate	Wilcoxon (Mann-Whitney)

Notes:

[38] - unadjusted p-value

Statistical analysis title	Secukinumab No Load v Placebo
----------------------------	-------------------------------

Statistical analysis description:

Week 52 Secukinumab, No Load, Core Phase results

Comparison groups	Secukinumab, No Load, Core Phase v Placebo, Core Phase
Number of subjects included in analysis	140
Analysis specification	Pre-specified
Analysis type	
P-value	< 0.0001 <sup>[39]</sup>
Method	Wilcoxon (Mann-Whitney)
Parameter estimate	Wilcoxon (Mann-Whitney)

Notes:

[39] - unadjusted p-value

<b>Statistical analysis title</b>	Secukinumab No Load v Placebo
Statistical analysis description: Week 52 Placebo, Core Phase results	
Comparison groups	Secukinumab, No Load, Core Phase v Placebo, Core Phase
Number of subjects included in analysis	140
Analysis specification	Pre-specified
Analysis type	
P-value	< 0.0001 <sup>[40]</sup>
Method	Wilcoxon (Mann-Whitney)
Parameter estimate	Wilcoxon (Mann-Whitney)

Notes:

[40] - unadjusted p-value

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events are reported from first dose of study treatment until end of study treatment plus 12 weeks post-treatment, up to a maximum timeframe of 1604 days (approx 229 weeks).

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	23.1
--------------------	------

### Reporting groups

Reporting group title	Any AIN457 150 mg, in Core Phase and Extension Phase
-----------------------	--

Reporting group description:

Any AIN457 150 mg, in Core Phase (Load and No Load) and Extension Phase (Responders from the Core Phase randomized to 150 mg in the Extension Phase)

Reporting group title	Any AIN457 300 mg in Extension Phase
-----------------------	--------------------------------------

Reporting group description:

Any AIN457 300 mg in Extension Phase (Responders and Non-Responders from the Core Phase)

Reporting group title	Any AIN457, In Core Phase and Extension Phase
-----------------------	---

Reporting group description:

Any AIN457, in Core Phase (Load and No Load) and Extension Phase (Responders and Non-Responders from the Core Phase), 150 mg or 300 mg.

Reporting group title	Placebo, Core Phase
-----------------------	---------------------

Reporting group description:

Placebo s.c., Core Phase

Serious adverse events	Any AIN457 150 mg, in Core Phase and Extension Phase	Any AIN457 300 mg in Extension Phase	Any AIN457, In Core Phase and Extension Phase
Total subjects affected by serious adverse events			
subjects affected / exposed	48 / 543 (8.84%)	11 / 254 (4.33%)	58 / 543 (10.68%)
number of deaths (all causes)	0	0	0
number of deaths resulting from adverse events	0	0	0

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 November 2016	The powering of the study was re-evaluated, triggering a changed order in the testing hierarchy as well as adjustments of the population for the primary endpoint to TNFi-naïve patients only. After feedback from the FDA, changes were made to Analysis Plan B to focus on the no-load dosing regimen. The test for HLA-B27 was moved from the baseline visit to Screening Visit 2 to facilitate the screening process for the sites. The maximally allowed proportion of TNF-IR patients was changed from 30% to 20%. Historic MRIs were accepted, if taken within 3 months of baseline and in alignment of the imaging criteria to facilitate the re-screening process for patients and sites. The wording in the SAE reporting section was updated to be aligned with current and future SAE reporting processes. A decision was taken to replace the eSource system and collect the data for the study in OC/RDC in all countries.
11 July 2018	Addition of an extension phase to the current core protocol. The order of the secondary endpoints of the Analysis Plan B in the hierarchy was updated to elevate several Load regimen endpoints to reflect their clinical relevance. Addition of group-sequential testing for the Week 24 interim analysis of the Week 52 time points (Analysis Plan B). The wording for the Withdrawal of Consent section was updated to align with the European Economic Area (EEA) General Data Protection Regulation (GDPR) requirements.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
