

Clinical trial results:

A non-controlled, single arm, open label, Phase II study of intravenous and intratumoral administration of ParvOryx in patients with metastatic, inoperable pancreatic cancer

Summary

EudraCT number	2015-001119-11
Trial protocol	DE
Global end of trial date	28 May 2020

Results information

Result version number	v1 (current)
This version publication date	11 January 2022
First version publication date	11 January 2022
Summary attachment (see zip file)	ParvOryxSynopsis_sign (20190229_ParvOryx02_Synopsis_sign.pdf)

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 January 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 February 2018
Global end of trial reached?	Yes
Global end of trial date	28 May 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- Primary objectives: To investigate the safety and tolerability of the ParvOryx as well as the associated virus distribution, shedding and elimination
- Secondary objectives: To provide proof of concept for ParvOryx in the treatment of pancreatic cancer assessed by laboratory and clinical characteristics

Protection of trial subjects:

Sequential enrolment

Sequential dose escalation

Safety data were reviewed by a data safety monitoring board (DSMB)

Hospitalisation during and after application of IMP

Background therapy:

In accordance with the European 'Guidance on investigational medicinal products (IMPs) and non investigational medicinal product (NIMPs)', gemcitabine and nab-paclitaxel were defined as non-investigational medicinal products.

Evidence for comparator:

Not applicable (no comparator)

Actual start date of recruitment	17 February 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 7
Worldwide total number of subjects	7
EEA total number of subjects	7

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	6
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

All patients were recruited in Germany; 7 patients were treated between 17th February 2016 (first screening examination) and 21st February 2018 (last study visit)

Pre-assignment

Screening details:

Screening phase: Not more than 14 days before the first administration of ParvOryx. Eligible were Patients with stage IV pancreatic ductal adenocarcinoma and at least one hepatic metastasis.

Pre-assignment period milestones

Number of subjects started	7
Number of subjects completed	7

Period 1

Period 1 title	Screening
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

not applicable

Arms

Are arms mutually exclusive?	Yes
Arm title	Dose level 1

Arm description:

Administration of IMP at the total dose of 1E09 pfu. The total dose was applied by the following scheme: Intravenous: 1 x 1E8 pfu (2-hour infusion) per day over 4 days, intratumorally: 6 x 1E8 pfu (slow infusion).

Arm type	Experimental
Investigational medicinal product name	ParvOryx
Investigational medicinal product code	
Other name	Parvovirus H1 in Visipaque/Ringer solution
Pharmaceutical forms	Solution for injection
Routes of administration	Intratumoral use, Intravenous use

Dosage and administration details:

Dose level 1:

- Intravenous: 1 x 1E8 pfu (2-hour infusion) per day over 4 days
- Intratumoral: 6 x 1E8 pfu (slow infusion)
- Total dose: 1 x 1E9 pfu

Arm title	Dose level 2
------------------	--------------

Arm description:

Administration of IMP at the total dose 5E09 pfu. The total dose was applied by the following scheme: Intravenous: 5 E08 pfu (2-hour infusion) per day over 4 days, and an intratumoral slow infusion of 3 E09 pfu.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	ParvOryx
Investigational medicinal product code	ParvOryx
Other name	Parvovirus H-1 in Visipaque/Ringer solution
Pharmaceutical forms	Solution for injection
Routes of administration	Intratumoral use, Intravenous use

Dosage and administration details:

Dose level 2:

- Intravenous: 5 E08 pfu (2-hour infusion) per day over 4 days
- Intratumoral: 3 E09 pfu (slow infusion)
- Total dose: 5 E09 pfu

Arm title	Dose level 3
------------------	--------------

Arm description:

Administration of IMP at a total dose of 1E10 pfu. The total dose was applied by the following scheme: 1 x 1E9 pfu intravenous (2-hour infusion) per day over 4 days and Intratumoral: 6 x 1E9 pfu (administered in one slow infusion).

Arm type	Experimental
Investigational medicinal product name	ParvOryx
Investigational medicinal product code	ParvOryx
Other name	Parvovirus H-1 in Visipaque/Ringer solution
Pharmaceutical forms	Solution for injection
Routes of administration	Intratumoral use, Intravenous use

Dosage and administration details:

Dose level 3:

- Intravenous: 1 x 1E9 pfu (2-hour infusion) per day over 4 days
- Intratumoral: 6 x 1E9 pfu (slow infusion)
- Total dose: 1 x 1E10 pfu

Subject analysis sets

Subject analysis set title	Full analysis set/Safety set
----------------------------	------------------------------

Subject analysis set type	Full analysis
---------------------------	---------------

Subject analysis set description:

Full Analysis Set (FAS): Consists of those subjects who were included in the trial and received the study medication at least once. The term "Intention-to-treat analysis" (ITT analysis) is used for an analysis applying the ITT principle to all subjects of the FAS. This means that all subjects are analysed as if they had been treated as specified in the study protocol.

In this study, the safety set is identical to the FAS.

Subject analysis set title	Dose level 1
----------------------------	--------------

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 September 2015	This amendment (approved by the PEI not needed; by the EC on 29th September 2015) concerned additional requirement made by the PEI. This amendment led to protocol version 5.
24 February 2016	This amendment (approved by the EC on 24th February 2016 and by the PEI on 26th February 2016) concerned the implementation of MRI as the basis for assessment of clinical response (additional assessment on the days of intratumoral administration and on Day 28). In addition, an Information sheet for patients' relatives was provided for approval to the EC. This amendment led to protocol version 6.
15 July 2016	This amendment (approved by the PEI on 15th July 2016 and by the EC on 21st June 2016) concerned exclusion criterion no. 3: "peritoneal carcinosis" was augmented with "clinically apparent ascites", and some other, formal, changes were made. This amendment led to protocol version 7.
25 October 2016	This amendment (approved by the PEI on 3rd November 2016 and by the EC on 25th October 2016) concerned the annual up-date of the IB only. This amendment affected the IB only.
14 December 2016	This amendment (approved by the PEI not needed; by the EC on 14th December 2016) concerned a change of personnel; a second deputy of the principal investigator changed (formerly Dr. Athanasios Mavratzas, then Dr. Nicolas Hohmann) and information about prolongation of trial duration. (See Appendix 16.1.1.7.) This was an administrative amendment and did not require a new protocol version.
03 January 2017	This amendment (approved by the PEI on 20th January 2017 and by the EC on 3rd January 2107) allowed the parallel inclusion of patients nos. 4 and 5 and of patients nos. 6 and 7. This amendment led to protocol version 8.
26 September 2017	This amendment (approved by the PEI on 10th October 2017 and by the EC on 26th September 2017) concerned the annual up-date of the IB only. This amendment affected the IB only.
10 April 2018	This amendment (approved by the PEI on 23rd April 2018 and by the EC on 10th April 2018) introduced the replacement of all patients who did not receive the complete course of study treatment. This amendment led to protocol version 9.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

not applicable

Notes:
