Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 April 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 April 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to demonstrate that diosmectite efficacy (administered as 2 sachets three times a day [TID]) is superior to placebo regarding the time to recovery of an acute diarrhoea episode presumed of infectious origin in adult participants.

Protection of trial subjects:

The study was conducted under the provisions of the Declaration of Helsinki, in accordance with the International Council on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use, Consolidated Guideline on Good Clinical Practice, in compliance with Independent Ethics Committees/Institutional Review Boards and informed consent regulations, and adhered to all local regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 March 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Tunisia: 188
Country: Number of subjects enrolled	Czech Republic: 187
Country: Number of subjects enrolled	Poland: 179
Country: Number of subjects enrolled	Egypt: 126
Country: Number of subjects enrolled	Algeria: 121
Country: Number of subjects enrolled	Lebanon: 52
Worldwide total number of subjects	853
EEA total number of subjects	366

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	804
From 65 to 84 years	45
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

The study enrolled adult participants with a recent episode of acute diarrhoea presumed of infectious origin, defined as the passage of 3 or more unformed (loose or watery) stools per day without alarm symptoms within the first 48 hours. Participants were randomised at 62 study centres in Algeria, Czech Republic, Egypt, Lebanon, Poland and Tunisia.

Pre-assignment

Screening details:

858 participants were randomised, of which 853 were included in the analysis and 5 were excluded due to invalid consent. Only participants included in the analysis are presented in the subject disposition. Participants received a diary evaluation booklet (DEB) to record each stool plus consistency on a daily basis from inclusion until end of study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Assessor, Carer, Data analyst, Subject, Monitor

Arms

Are arms mutually exclusive?	Yes
Arm title	Diosmectite

Arm description:

Participants received diosmectite as 2 sachets, TID (2 sachets in the morning, 2 sachets at mid-day, and 2 sachets in the evening). Each sachet was taken in half a glass of water. The mandatory treatment period was from Day 1 to Day 4 or Day 5 (with a minimum of 24 sachets taken within 4 or 5 days). Treatment could continue from Day 5 up to Day 8 or 9 (with a maximum of 48 sachets taken within 8 or 9 days).

Arm type	Experimental
Investigational medicinal product name	Diosmectite
Investigational medicinal product code	
Other name	Smecta®
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

Diosmectite consisted of powder for suspension for oral use. Each sachet contained 3 grams diosmectite as active substance.

Arm title	Placebo
------------------	---------

Arm description:

Participants received matching placebo as 2 sachets, TID (2 sachets in the morning, 2 sachets at mid-day, and 2 sachets in the evening). Each sachet was taken in half a glass of water. The mandatory treatment period was from Day 1 to Day 4 or Day 5 (with a minimum of 24 sachets taken within 4 or 5 days). Treatment could continue from Day 5 up to Day 8 or 9 (with a maximum of 48 sachets taken within 8 or 9 days).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

The placebo consisted of powder for suspension for oral use similar to the investigational product

without the active substance. The placebo was presented in sachets.

Number of subjects in period 1	Diosmectite	Placebo
Started	430	423
Completed	402	400
Not completed	28	23
Adverse event, non-fatal	4	3
Unspecified	2	8
Lost to follow-up	13	5
Consent withdrawn	4	4
Protocol deviation	5	3

Primary: Time to Recovery

End point title	Time to Recovery
-----------------	------------------

End point description:

Time to recovery was defined as the time from the first study treatment intake recorded in the electronic case report form (eCRF) to the first formed stool followed by a non-watery stool, recorded in the DEB. Results are presented as median time to recovery, calculated using the Kaplan-Meier technique. The Intention-To-Treat (ITT) population included all randomised participants (with the exception of those excluded from the analysis), analysed according to the arm to which they were randomised. Participants prematurely withdrawn without recovery or ending the study without recovery were censored (not responders) at the date/time of their last stool as recorded in the DEB. Participants who had not filled in the DEB (i.e. no post-baseline evaluation of stools) were censored at the date/time of their first study treatment intake (or the randomisation date/time if not administered).

End point type	Primary
----------------	---------

End point timeframe:

From randomisation (Day 1) up to Day 9

End point values	Diosmectite	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	430	423		
Units: Hours				
median (confidence interval 95%)	66.0 (53.7 to 71.0)	68.6 (57.5 to 77.8)		

Statistical analyses

Statistical analysis title	Difference Between Treatment Groups
----------------------------	-------------------------------------

Statistical analysis description:

The primary analysis tested the equality of time to recovery between the 2 treatment groups, applying the 2-sided Gehan-Wilcoxon test ($\alpha=5\%$).

Comparison groups	Diosmectite v Placebo
-------------------	-----------------------

Number of subjects included in analysis	853
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.2524
Method	Wilcoxon-Gehan test

Notes:

[1] - The following Null-hypothesis was tested:

$H_0: \lambda_A(t) = \lambda_B(t)$ versus $H_1: \lambda_A(t) \neq \lambda_B(t)$,

where $\lambda(t)$ represents the hazard at time t , A=diosmectite and B=placebo.

Secondary: Time From Diarrhoea Onset to Recovery

End point title	Time From Diarrhoea Onset to Recovery
-----------------	---------------------------------------

End point description:

The event of diarrhoea onset (i.e. loose or watery stool) was recorded in the eCRF and the event of recovery (i.e. first formed stool followed by a non-watery stool) was recorded in the DEB. Results are presented as median time from diarrhoea onset to recovery, calculated using the Kaplan-Meier technique. The ITT population included all randomised participants (with the exception of those excluded from the analysis), analysed according to the arm to which they were randomised. Participants prematurely withdrawn without recovery or ending the study without recovery were censored (not responders) at the date/time of their last stool as recorded in the DEB. Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment emergent adverse events were collected from Day 1 until 7 days after the end of the study treatment, up to 16 days.

Adverse event reporting additional description:

The safety population included all randomised participants who received at least 1 dose of study treatment (except for those excluded from the analysis). Participants were analysed according to the actual treatment received.

Assessment type	Systematic

Reporting groups

Reporting group title	Diosmectite
-----------------------	-------------

Reporting group description:

Participants received diosmectite as 2 sachets, TID (2 sachets in the morning, 2 sachets at mid-day, and 2 sachets in the evening). Each sachet was taken in half a glass of water.

The mandatory treatment period was from Day 1 to Day 4 or Day 5 (with a minimum of 24 sachets taken within 4 or 5 days). Treatment could continue from Day 5 up to Day 8 or 9 (with a maximum of 48 sachets taken within 8 or 9 days).

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received matching placebo as 2 sachets, TID (2 sachets in the morning, 2 sachets at mid-day, and 2 sachets in the evening). Each sachet was taken in half a glass of water.

The mandatory treatment period was from Day 1 to Day 4 or Day 5 (with a minimum of 24 sachets taken within 4 or 5 days). Treatment could continue from Day 5 up to Day 8 or 9 (with a maximum of 48 sachets taken within 8 or 9 days).
