Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 March 2010
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	09 March 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the effectiveness (change in level of irritability and related behaviors) and safety and tolerability of the administration of 2 different fixed dose levels of risperidone (an atypical antipsychotic drug) compared with placebo in children or adolescents who have autism, and to evaluate the safety and tolerability of the drug for additional 26 weeks after the initial 6-week study period.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. Known instances of nonconformance were documented and are not considered to have had an impact on the overall conclusions of this study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 November 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 96

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 96 subjects were enrolled in the study.

Period 1

Period 1 title	Overall study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects weighing 20 kg to <45 kg were started with 0.5 ml of placebo solution on Day 1 and were titrated up to 1.25 ml on Day 4. Subjects weighing ≥ 45 kg at baseline were started with 0.75 ml of placebo solution on Day 1 and were titrated up to 1.75 ml on Day 4.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects weighing 20 kg to <45 kg were started with 0.5 ml of placebo solution on Day 1 and were titrated up to 1.25 ml on Day 4. Subjects weighing ≥ 45 kg at baseline were started with 0.75 ml of placebo solution on Day 1 and were titrated up to 1.75 ml on Day 4.

Arm title	Risperidone Low Dose
------------------	----------------------

Arm description:

Subjects weighing 20 kg to <45 kg were started with 0.05 mg on Day 1 and were titrated up to 0.125 mg on Day 4. Subjects weighing ≥ 45 kg at baseline were started with 0.075 mg on Day 1 and were titrated up to 0.175 mg on Day 4.

Arm type	Experimental
Investigational medicinal product name	Risperidone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects weighing 20 kg to <45 kg were started with 0.05 mg on Day 1 and were titrated up to 0.125 mg on Day 4. Subjects weighing ≥ 45 kg at baseline were started with 0.075 mg on Day 1 and were titrated up to 0.175 mg on Day 4.

Arm title	Risperidone High Dose
------------------	-----------------------

Arm description:

Subjects weighing 20 kg to <45 kg were started with 0.5 mg on Day 1 and were titrated up to 1.25 mg on Day 4. Subjects weighing ≥ 45 kg at baseline were started with 0.75 mg on Day 1 and were titrated up to 1.75 mg on Day 4.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Risperidone

Period 2

Period 2 title	Open Label
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	OL Risperidone
-----------	----------------

Arm description:

Subjects who completed the double-blind phase, or discontinued after at least 3 weeks for reasons other than tolerability and, in the investigator's judgment needed risperidone treatment were eligible to enter the open-label phase. Risperidone was given as oral solution (1 mg/mL) for the first 3 days and as tablets from Day 4 on. On Day 1, subjects with a baseline weight of 20 kg to <45 kg were started on risperidone 0.125 mg/day, and subjects with a baseline weight of 45 kg or more were started on risperidone 0.175 mg/day. On Day 4, the dose was increased to 0.25 mg for all subjects. After Day 14, dose increments of 0.25 mg or 0.5 mg (upon the judgment of the investigator) were allowed every 2 weeks. The maximum allowed dose was 1.25 mg for subjects with baseline weight of 20 kg to <45 kg and 1.75 mg for subjects with a baseline weight of 45 kg or more.

Arm type	Experimental
Investigational medicinal product name	OL Risperidone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Number of subjects included in analysis	63
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	< 0.001 ^[2]
Method	ANCOVA
Parameter estimate	Mean difference (final values)
Point estimate	-7.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	-12.19
upper limit	-3.52
Variability estimate	Standard error of the mean
Dispersion value	2.18

Notes:

[1] - A step-down testing procedure was employed with the risperidone high dose versus placebo comparison tested first. If this comparison was significant the risperidone low dose versus placebo comparison would be performed. A clinically relevant difference in the change from baseline on the ABC Irritability subscale was assumed to be 6 with a standard deviation of 8. To achieve 80% power with Type I error rate of 5%, 93 subjects were required.

[2] - Type I error is preserved by the step down procedure, no multiple comparison adjustment is needed. A priori threshold for statistical significance was 0.05.

Adverse events information

Timeframe for reporting adverse events:

Double-blind period: 6 weeks. Open-label period: 6 months

Assessment type	Non-systematic
-----------------	----------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	12.1
--------------------	------

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects weighing 20 kg to <45 kg were started with 0.5 ml of placebo solution on Day 1 and were titrated up to 1.25 ml on Day 4. Subjects weighing ≥45 kg at baseline were started with 0.75 ml of placebo solution on Day 1 and were titrated up to 1.75 ml on Day 4.

Reporting group title	Risperidone Low Dose
-----------------------	----------------------

Reporting group description:

Subjects weighing 20 kg to <45 kg were started with 0.05 mg on Day 1 and were titrated up to 0.125 mg on Day 4. Subjects weighing ≥45 kg at baseline were started with 0.075 mg on Day 1 and were titrated up to 0.175 mg on Day 4.

Reporting group title	Risperidone High Dose
-----------------------	-----------------------

Reporting group description:

Subjects weighing 20 kg to <45 kg were started with 0.05 mg on Day 1 and were titrated up to 0.125 mg on Day 4. Subjects weighing ≥45 kg at baseline were started with 0.075 mg on Day 1 and were titrated up to 0.175 mg on Day 4.

Reporting group title	Open-label Risperidone
-----------------------	------------------------

Reporting group description:

Subjects who completed the double-blind phase, or discontinued after at least 3 weeks for reasons other than tolerability and, in the investigator's judgment needed risperidone treatment were eligible to enter the open-label phase. Risperidone was given as oral solution (1 mg/mL) for the first 3 days and as tablets from Day 4 on. On Day 1, subjects with a baseline weight of 20 kg to <45 kg were started on risperidone 0.125 mg/day, and subjects with a baseline weight of 45 kg or more were started on risperidone 0.175 mg/day. On Day 4, the dose was increased to 0.25 mg for all subjects. After Day 14, dose increments of 0.25 mg or 0.5 mg (upon the judgment of the investigator) were allowed every 2 weeks. The maximum allowed dose was 1.25 mg for subjects with baseline weight of 20 kg to <45 kg and 1.75 mg for subjects with a baseline weight of 45 kg or more.

Serious adverse events	Placebo	Risperidone Low Dose	Risperidone High Dose
Total subjects affected by serious adverse events			
subjects affected / exposed	1 / 35 (2.86%)	0 / 30 (0.00%)	0 / 31 (0.00%)
number of deaths (all causes)	0	0	0
number of deaths resulting from adverse events			0
Congenital, familial and genetic disorders
