

Clinical trial results:

A Phase Ib/II, open-label, multicenter trial with oral cMET inhibitor INC280 alone and in combination with erlotinib versus platinum/pemetrexed in adult patients with EGFR mutated, cMET-amplified, locally advanced/metastatic non-small cell lung cancer (NSCLC) with acquired resistance to prior EGFR tyrosine kinase inhibitor (EGFR TKI)

General information about the trial

Main objective of the trial:

To determine MTD and/or RP2D of INC280 in combination with erlotinib

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Primary: Dose Limiting Toxicities (DLTs)

End point title	Dose Limiting Toxicities (DLTs) ^[1]
End point description:	
Dose limiting toxicity (DLT): an adverse event (AE) or abnorm. lab. val. assessed as unrelated to disease, disease prog., inter-current illness, or concom. meds that occurs within 1st 28 days of treatment with INC280 in comb. with erlotinib during dose escalation (DE) part of study & meets any of the National Cancer Institute Common Terminology Criteria for AEs ver. 4.03 used for all grading. For purpose of DE, DLTs were consid. & incl. in BLRM. *1 subject's AEs fatigue, peripheral oedema & abnorm. blood TSH (all grade 1), were not in line with DLT def. as documented in CSR & occurred after DLT period (cycle 1). **1 subj. wasn't incl. in DDS population. At time of DE BLRM analysis cutoff, subj. was considered not evaluable since they didn't start study treatment & therefore not incl. in analysis. On Day 15 subj. dev. grd 3 dry skin & didn't receive any concomit. med. for this toxicity. Subj. decided not to cont. clinical trial; Investig. considered this event clin. significant as DLT

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All Adverse events are reported in this record from First Patient First Treatment until Last Patient Last Visit.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 November 2015	The main purpose of this protocol amendment was to optimize the subject safety and toxicity monitoring and to align Novartis study protocols.
27 October 2017	The main purpose of this amendment was to introduce the new dosage strength of INC280 150mg oral tablets were used to administer doses of 300mg (150mg x2) INC280 to ensure continuity of treatment. The INC280 100mg oral tablets would no longer be manufactured to support a dose of 300mg required for dose reductions from the 400mg starting dose.
