

## Clinical trial results:

### A Randomised, Open-label Study of Ponatinib Versus Nilotinib in Patients With Chronic Myeloid Leukemia in Chronic Phase Following Resistance to Imatinib

#### Summary

EudraCT number	2015-001318-92
Trial protocol	BE HU DE GB NL ES DK CZ PT FR AT PL
Global end of trial date	19 January 2021

#### Results information

Result version number	v1 (current)
This version publication date	13 November 2021
First version publication date	13 November 2021

#### Trial information

##### Trial identification

Sponsor protocol code	AP24534-15-303
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02627677
WHO universal trial number (UTN)	-

Notes:

##### Sponsors

Sponsor organisation name	Takeda
Sponsor organisation address	95 Hayden Avenue, Lexington, United States, MA 02421
Public contact	Study Director, Takeda, TrialDisclosures@takeda.com
Scientific contact	Study Director, Takeda, TrialDisclosures@takeda.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 January 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	19 January 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The main objective of the study was to demonstrate the efficacy of ponatinib administered at 2 starting doses (30 and 15 mg once daily [QD]) compared to nilotinib administered at 400 mg twice daily (BID) in participants with chronic phase-chronic myeloid leukemia (CP-CML) who are resistant to imatinib, as measured by major molecular response (MMR) by 12 months.

Protection of trial subjects:

All the participants were required to read and sign the informed consent form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 3
Country: Number of subjects enrolled	Russian Federation: 32
Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Hungary: 1
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Czechia: 2
Worldwide total number of subjects	44
EEA total number of subjects	8

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	38
From 65 to 84 years	6
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants took part in the study at 90 investigative sites in Austria, Canada, Czechia, France, Hungary, Italy, Korea, and Russia from 31 December 2015 to 20 January 2021

### Pre-assignment

Screening details:

Participants with a diagnosis of chronic phase-chronic myeloid leukemia were enrolled and randomised at a ratio of 1:2:1 to receive ponatinib 30 mg and ponatinib 15 mg compared with nilotinib 400 mg.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort A: Ponatinib 30 mg

Arm description:

Ponatinib 30 mg, tablets, orally, once daily (QD) until achievement of major molecular response (MMR) up to 12 months. Once MMR was achieved, participants received reduced dose of ponatinib 15 mg orally once daily up to approximately 42 months.

Arm type	Experimental
Investigational medicinal product name	Ponatinib 30 mg QD
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ponatinib 30 mg, taken orally once daily.

<b>Arm title</b>	Cohort B: Ponatinib 15 mg
------------------	---------------------------

Arm description:

Ponatinib 15 mg, tablets, orally, QD until achievement of MMR up to 12 months. Once MMR was achieved, participants received reduced dose of ponatinib 15 mg orally once daily up to approximately 45 months.

Arm type	Experimental
Investigational medicinal product name	Ponatinib 15 mg QD
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ponatinib 15 mg, taken orally once daily.

<b>Arm title</b>	Cohort C: Nilotinib 400 mg
------------------	----------------------------

Arm description:

Nilotinib 400 mg, tablets, orally, twice daily up to approximately 42 months.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Nilotinib 400 mg BID
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Nilotinib 400 mg, taken orally twice daily.

<b>Number of subjects in period 1</b>	Cohort A: Ponatinib 30 mg	Cohort B: Ponatinib 15 mg	Cohort C: Nilotinib 400 mg
Started	11	21	12
Completed	0	0	0

## Statistical analyses

No statistical analyses for this end point

## Primary: Percentage of Participants with Treatment Emergent Arterial Occlusive Events (TE-AOEs), Treatment Emergent Venous Thromboembolic Events (TE-VTE), Adverse Events (AEs), and Serious AEs (SAEs)

End point title	Percentage of Participants with Treatment Emergent Arterial Occlusive Events (TE-AOEs), Treatment Emergent Venous Thromboembolic Events (TE-VTE), Adverse Events (AEs), and Serious AEs (SAEs) <sup>[2]</sup>
-----------------	---

End point description:

TE-AOE: event with initial onset date on/after 1st dose date and no later than 30 days after last dose date of study treatment or events starting after initial consent that worsen in severity on/after 1st dose date. TE-VTE: vascular occlusive event with initial onset date on/after 1st dose date and no later than 30 days after last dose date of study treatment or events starting after initial consent that worsen in severity on/after 1st dose date. AE: any untoward medical occurrence in participant administered pharmaceutical product; untoward medical occurrence does not necessarily have causal relationship with this treatment. SAE: any untoward medical occurrence that at any dose results in death, is life-threatening, requires inpatient hospitalization/prolongation of existing hospitalization, results in persistent/incapacity, is congenital anomaly/birth defect/is medically important event. Safety Population: all participants who have received at least 1 dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

From first dose up to 30 days post last dose (Up to approximately 46 months)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics are reported for this outcome measure.

### Secondary: Percentage of Participants who Achieved/Maintained Complete Hematologic Response (CHR)

End point title	Percentage of Participants who Achieved/Maintained Complete Hematologic Response (CHR)
-----------------	--

End point description:

CHR rate is defined as the percentage of participants achieving CHR at any time after initiation of study

treatment. CHR is defined as achieving all of the following measurements: White blood cells (WBC)  $\leq$  institutional upper limit of normal (ULN); Platelets  $<450 \times 10^9/L$ ; No blasts or promyelocytes in peripheral blood;  $<5\%$  myelocytes plus metamyelocytes in peripheral blood; Basophils in peripheral blood  $<5\%$ ; No extramedullary involvement (including no hepatomegaly or splenomegaly). Safety Population includes all participants who have received at least 1 dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

3 months after the first dose of study treatment

## Secondary: Percentage of Participants with Treatment Emergent AEs Leading to Treatment Discontinuation, Dose Reduction and Dose Interruption

End point title	Percentage of Participants with Treatment Emergent AEs Leading to Treatment Discontinuation, Dose Reduction and Dose Interruption
-----------------	---

End point description:

An AE is defined as any untoward medical occurrence in a clinical investigation participant administered a drug; it does not necessarily have to have a causal relationship with this treatment. A TEAE is defined as an adverse event with an onset that occurs after receiving study drug. Safety Population includes all participants who have received at least 1 dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

From first dose up to end of treatment (Up to approximately 45 months)

## Secondary: Percentage of Participants with Progression to Accelerated Phase (AP) or Blast Phase (BP)-CML

End point title	Percentage of Participants with Progression to Accelerated Phase (AP) or Blast Phase (BP)-CML
-----------------	---

End point description:

Progression to AP is defined as:  $\geq 15\%$  and  $< 30\%$  blasts in peripheral blood or bone marrow or  $\geq 20\%$  basophils in peripheral blood or bone marrow or  $\geq 30\%$  blasts + promyelocytes in peripheral blood or bone marrow (but  $< 30\%$  blasts) or  $< 100 \times 10^9$  platelets/L in peripheral blood unrelated to therapy or cytogenetic, genetic evidence of clonal evolution, and no extramedullary disease. Progression to BP-CML is defined as:  $\geq 30\%$  blasts in peripheral blood or bone marrow or extramedullary disease other than hepatosplenomegaly.

End point type	Secondary
----------------	-----------

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All-cause mortality: From first dose up to end of study (Up to approximately 60 months); for serious and other adverse events: from first dose up to 30 days post last dose (Up to approximately 46 months)

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study treatment. Safety Population includes participants who have received at least 1 dose of study drug.

Assessment type	Systematic

### Reporting groups

Reporting group title	Cohort A: Ponatinib 30 mg
-----------------------	---------------------------

Reporting group description:

Ponatinib 30 mg, tablets, orally, once daily (QD) until achievement of major molecular response (MMR) up to 12 months. Once MMR was achieved, participants received reduced dose of ponatinib 15 mg orally once daily up to approximately 42 months.

Reporting group title	Cohort C: Nilotinib 400 mg
-----------------------	----------------------------

Reporting group description:

Nilotinib 400 mg, tablets, orally, twice daily up to approximately 42 months.

Reporting group title	Cohort B: Ponatinib 15 mg
-----------------------	---------------------------

Reporting group description:

Ponatinib 15 mg, tablets, orally, QD until achievement of MMR up to 12 months. Once MMR was achieved, participants received reduced dose of ponatinib 15 mg orally once daily up to approximately 45 months.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 March 2016	Amendment 2: Imposed more stringent and detailed guidelines for contraception requirements of participants on the study. Excluded participants with hypersensitivity to the ponatinib or nilotinib active substances or to any of their inactive ingredients. Added Hepatitis B virus serology as a screening requirement. Increased the blood count and lipase monitoring frequency (additional screens on Day 15 during Cycle 2 and Cycle 3) in adherence to the ponatinib Investigator's Brochure. Changed statistical testing scheme to use Bonferroni procedure rather than Hochberg procedure to adjust for comparisons of Cohorts A and B to Cohort C. Updated the Schedule of Events to allow another option (brain natriuretic peptide testing) for sites unable to perform N-terminal pro-brain natriuretic peptide testing. Added requirements for an eye exam at screening and throughout treatment period as clinically indicated. Provided guidance for ocular toxicity. Corrected dose modification for nilotinib for Grade 3 peripheral vascular arterial events, QT interval corrected (Fridericia) (QTcF) prolongation and amylase/lipase elevations. Updated sponsor contact information.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study was terminated due to operational feasibility and not due to any safety concerns.

Notes:
