Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000057-PIP60-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 May 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 May 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the efficacy of tofacitinib versus placebo for the treatment of signs and symptoms of JIA at Week 44/End of Study (Week 26 of the double-blind phase) as measured by the percentage of subjects with disease flare (according to PRCSG/PRINTO Disease Flare criteria) after Week 18 of the open-label run-in phase.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 June 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 15
Country: Number of subjects enrolled	Australia: 4
Country: Number of subjects enrolled	Brazil: 20
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Israel: 15
Country: Number of subjects enrolled	Mexico: 12
Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Russian Federation: 19
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	Turkey: 14
Country: Number of subjects enrolled	Ukraine: 24
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	United States: 89
Country: Number of subjects enrolled	Belgium: 1
Worldwide total number of subjects	225
EEA total number of subjects	6

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	86
Adolescents (12-17 years)	139
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study was conducted in the 14 countries from 10-Jun-2016 to 16-Jun-2019. A total of 225 subjects were enrolled.

Period 1

Period 1 title	Open-Label Phase (18 Weeks)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Tofacitinib: Open-Label Phase
-----------	-------------------------------

Arm description:

Subjects received tofacitinib 5 milligram (mg) tablets (for subjects greater than or equal to [\geq] 40 kilogram (kg) body weight) or tofacitinib 5 milliliter (mL) oral solution (for subjects less than [$<$] 40 kg body weight), twice daily [BID], orally for 18 weeks in open-label phase.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution, Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received tofacitinib 5 mg tablets or tofacitinib 5 ml oral solution.

Number of subjects in period 1	Tofacitinib: Open-Label Phase
Started	225
OLJAS	184 ^[1]
OLERA	21 ^[2]
OLPsA	20 ^[3]
OLFAS	225
Completed	185
Not completed	40
Adverse event, non-fatal	12
Protocol Deviation	4
Insufficient Clinical Response	21
Unspecified	3

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Subjects initially received drug for 18 weeks in open label phase.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Subjects initially received drug for 18 weeks in open label phase.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Subjects initially received drug for 18 weeks in open label phase.

Period 2

Period 2 title	Double Blind Phase (26 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Tofacitinib: Double Blind Phase

Arm description:

Subjects who completed open-label phase and achieved at least a JIA ACR 30 response in open label phase, were randomized at Week 18 to receive tofacitinib tablets (for subjects ≥ 40 body weight) or oral solution (for subjects < 40 kg body weight), BID, in double-blind phase for additional 26 weeks (up to Week 44).

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects received tofacitinib 5 mg tablets or tofacitinib 5 ml oral solution.

Arm title	Placebo
------------------	---------

Arm description:

Subjects who completed open-label phase and achieved at least a JIA ACR 30 response in open label phase, were randomized at Week 18 to receive placebo either as oral tablets, (for subjects ≥ 40 body weight) or oral solution (for subjects < 40 kg body weight), BID, in double-blind phase for additional 26 weeks (up to Week 44).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo either as oral tablets or oral solution.

Number of subjects in period 2 ^[4]	Tofacitinib: Double Blind Phase	Placebo
Started	88	85
DBJAS	72	70
DBERA	9 ^[5]	7 ^[6]
DBPsA	7 ^[7]	8 ^[8]
DBSAS	88	85
Completed	61	38
Not completed	27	47
Adverse event, non-fatal	2	2
Withdrawal By Parent/Guardian	1	-
Protocol Deviation	-	1
Insufficient Clinical Response	22	44
Unspecified	1	-
Medication Error Without Associated Adverse Event	1	-

Notes:

[4] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Only, Subjects who completed open-label phase and achieved at least a JIA ACR 30 response in open label phase, were included in double blind phase.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Only those subjects who completed open-label phase and achieved at least a JIA ACR 30 response in open label phase, were included in double blind phase.

[6] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Population sets were created to show different populations based on set criteria.

[7] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Only those subjects who completed open-label phase and achieved at least a JIA ACR 30 response in open label phase, were included in double blind phase.

[8] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Population sets were created to show different populations based on set criteria.

Baseline characteristics

Reporting groups

Secondary: Double Blind Phase: JIA ACR Core Variable- Change from Double-Blind Baseline in Childhood Health Assessment Questionnaire (CHAQ)- Disability Index at Week 44

End point title	Double Blind Phase: JIA ACR Core Variable- Change from Double-Blind Baseline in Childhood Health Assessment Questionnaire (CHAQ)- Disability Index at Week 44
-----------------	---

End point description:

CHAQ comprises of 3 indices: Disability, Discomfort, and global assessment of arthritis (overall well-being). CHAQ Disability Index: measure of functional ability, consists of 30 questions in 8 domains: dressing/grooming, arising, eating, walking, hygiene, reach, grip, activities-distributed, among a total of 30 items. Each question rated on a 4-point scale ranges from 0 (no difficulty) to 3 (unable to do). To calculate overall score, subject must have domain score in at least 6 of 8 domains. Scores of 8 domains were averaged to calculate the CHAQ disability index which ranges from 0 (no or minimal physical dysfunction) to 3 (very severe physical dysfunction), higher score=less ability. Highest score = score for functional area, minimum score = functional area is 2. DBJAS: all subjects randomized to DB phase,

received at least 1 dose of study medication in DB phase and had polyarticular course JIA. Number of subjects analysed=subjects who were evaluable for this end point.

End point title	Open Label Phase: Change From Baseline in JADAS-27 Erythrocyte Sedimentation Rate (ESR) Score at Week 2, 4, 8, 12 and 18
-----------------	--

End point description:

JADAS-27 is a validated composite disease activity measure for JIA. JADAS-27 ESR score was derived from four components; 1) Physician global assessment of disease activity (assessed on a VAS of 0 [no activity] to 10 [maximum activity]), 2) Parent/legal guardian/subject global assessment of overall well-being (assessed on a VAS of 0 [very well] to 10 [very poor]), 3) Number of joints with active disease (maximum of 27 and defined as joint with swelling or, in absence of swelling, limited range of motion accompanied by either pain on motion or tenderness), 4) ESR. The overall JADAS-27 score ranges from 0-57. A higher score indicates more disease activity. OLJAS: all subjects enrolled in OL phase and received at least 1 dose of medication in OL phase with polyarticular course JIA. Here, "n" signifies subjects evaluable for this endpoint at specified time points.

Secondary: Double Blind Phase: Percentage of Subjects With Presence of JIA ACR Clinical Remission

End point title	Double Blind Phase: Percentage of Subjects With Presence of JIA ACR Clinical Remission
-----------------	--

End point description:

JIA ACR Clinical Remission Criteria included: Clinical inactive disease for 6 months continuously while on medications for JIA. Clinical Inactive Disease criteria included: No joints with active arthritis, No fever, rash, serositis, splenomegaly, hepatomegaly, or generalized lymphadenopathy attributable to sJIA, No active uveitis (as defined by the SUN Working Group), Normal ESR (within normal limits of the method used where tested) or, if elevated, not attributable to JIA, Physician global assessment of disease activity (assessed on a VAS of 0 [no activity] to 10 [maximum activity]) score of 'best possible' (score of

"0") on the scale used, morning stiffness of less than or equal to (\leq) 15 minutes. DBJAS: all subjects randomized to DB phase, received at least 1dose of study medication in DB phase and had polyarticular course JIA.

End point type	Secondary
End point timeframe:	
From Week 18 up to Week 44	

End point values	Tofacitinib: Double Blind Phase	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	72	70

Secondary: Open Label Phase: JIA ACR Core Variable- Change From Baseline in Childhood Health Assessment Questionnaire (CHAQ)- Disability Index at Week 2, 4, 8, 12 and 18

End point title	Open Label Phase: JIA ACR Core Variable- Change From Baseline in Childhood Health Assessment Questionnaire (CHAQ)- Disability Index at Week 2, 4, 8, 12 and 18
-----------------	--

End point description:

CHAQ: parent-administered, valid assessment of functional disability, discomfort in pediatrics with rheumatic diseases. Parents report subjects ability to perform activities in 8 domains: dressing, arising, eating, walking, hygiene, each,grip, common activities distributed in total of 30 items. Each item is scored on 4-point Likert scale: 0=no difficulty; 1=some difficulty;2=much difficulty;3=unable to do. Highest score reported for domain is score for that domain. Overall score = sum of domain scores divided by number of domains answered. Total score: 0=no difficulty to 3=extreme difficulty, higher

score indicated more difficulty. OLJAS:all subjects enrolled in OL phase and received at least 1 dose of medication in OL phase with polyarticular course JIA. Here, "n" signifies subjects evaluable for this endpoint at specified time points.

End point description:

Tanner stage is a scale used to document the stage of development of puberty by assessing the secondary sexual characteristics: Pubic hair (both male and female), breast size (for females); and size of the genitalia (for males).were assessed in this study and with values in the scale ranging from: Stage 1: No glandular breast tissue palpable, Stage 2: Breast bud palpable under areola (1st pubertal sign in females), Stage 3: Breast tissue palpable outside areola; no areolar development, Stage 4: Areola elevated above contour of the breast, forming "double scoop" appearance, Stage 5: Areolar mound recedes back into single breast contour with areolar hyperpigmentation, papillae development and nipple protrusion. OLFAS: all subjects who were enrolled into OL phase and received at least 1 dose of study medication in OL phase. Here, Number of subjects analyzed signifies subjects who were evaluable for this end point.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the first dose of study drug up to week 44

Adverse event reporting additional description:

Same event may appear as AE and serious AE, what is presented are distinct events. Event may be categorized as serious in 1 subject and as nonserious in another subject or 1 subject may have experienced both serious and nonserious event during study.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Tofacitinib: Double Blind Phase
-----------------------	---------------------------------

Reporting group description:

Subjects who completed open-label phase and achieved at least a JIA ACR 30 response in open label phase, were randomized at Week 18 to receive tofacitinib tablets (for subjects ≥ 40 body weight) or oral solution (for subjects < 40 kg body weight), BID, in double-blind phase for additional 26 weeks (up to Week 44).

Reporting group title	Tofacitinib: Open-Label Phase
-----------------------	-------------------------------

Reporting group description:

Subjects received tofacitinib 5 mg tablets (for subjects ≥ 40 kg body weight) or tofacitinib 5 mL oral solution (for subjects < 40 kg body weight), BID, orally for 18 weeks in open-label phase.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects who completed open-label phase and achieved at least a JIA ACR 30 response in open label phase, were randomized at Week 18 to receive placebo either as oral tablets, (for subjects ≥ 40 body weight) or oral solution (for subjects < 40 kg body weight), BID, in double-blind phase for additional 26 weeks (up to Week 44).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Data not reported for the PK endpoint, since the PK dataset will be combined with PK from other studies to enable the analysis, the results of this pooled analysis will be reported separately.
--

Notes:
