Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 January 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	29 January 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study was to demonstrate superiority with regard to Overall Survival (OS) or Progression Free Survival (PFS) of avelumab versus platinum-based doublet, based on an Independent Review Committee assessment, in Non-small cell lung cancer (NSCLC) participants with Programmed death ligand 1+ (PD-L1+) tumors.

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 October 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Worldwide total number of subjects	1214
EEA total number of subjects	403

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1214
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 3423 subjects were screened out of which 1214 subjects received the study treatments.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Avelumab Biweekly

Arm description:

Subjects received Avelumab at a dose of 10 milligrams per kilogram (mg/kg) as a 1-hour (-10/+20 minutes) intravenous (IV) infusion once every 2 weeks until disease progression or unacceptable toxicities.

Arm type	Experimental
Investigational medicinal product name	Avelumab
Investigational medicinal product code	
Other name	MSB0010718C
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Avelumab at a dose of 10 milligrams per kilogram (mg/kg) as a 1-hour (-10/+20 minutes) intravenous (IV) infusion once every 2 weeks until disease progression or unacceptable toxicities.

Arm title	Avelumab Weekly
------------------	-----------------

Arm description:

Subjects received Avelumab at a dose of 10 mg/kg as a 1-hour (-10/+20 minutes) IV infusion every week for 12 consecutive weeks, followed by Avelumab at a dose of 10 mg/kg once every 2 weeks until disease progression or unacceptable toxicities.

Arm type	Experimental
Investigational medicinal product name	Avelumab
Investigational medicinal product code	
Other name	MSB0010718C
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Avelumab at a dose of 10 mg/kg as a 1-hour (-10/+20 minutes) IV infusion every week for 12 consecutive weeks.

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Cisplatin 75 mg/m² by IV infusion in 3-Week cycle up to a maximum of 6 cycles of IV injection until disease progression or unacceptable toxicities.

Arm title	Chemotherapy
Arm description:	
Subjects received Pemetrexed (500 milligrams per square meter [mg/m ²]) in combination with Cisplatin (75 mg/m ²) administered on Day1 of each cycle or pemetrexed (500 mg/m ²) in combination with carboplatin (area under the concentration curve [AUC] 6 milligrams per milliliter [mg/mL] * minutes administered on Day 1 of each cycle). Subjects assigned pemetrexed could continue to receive pemetrexed as a maintenance therapy after 4 cycles of platinum-based chemotherapy if their disease had not progressed. Subjects with tumor of squamous histology received Paclitaxel (200 mg/m ²) plus carboplatin (AUC 6 mg/mL * min administered on Day 1 of each cycle) or Gemcitabine (1250 mg/m ² administered on Day 1 and Day 8 of each cycle) plus cisplatin (75 mg/m ²) or Gemcitabine (1000 mg/m ² administered on Day 1 and Day 8 of each cycle) plus carboplatin (AUC 5 mg/mL * min) in 3-week cycles up to a maximum of 6 cycles of IV injection or until disease progression or unacceptable toxicities.	
Arm type	Experimental
Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Paclitaxel 200 mg/m² by IV infusion on Day 1 of 3-Week cycle up to a maximum of 6 cycles of IV injection until disease progression or unacceptable toxicities.

Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for concentrate for solution for infusion, Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Pemetrexed 500 milligrams per square meter (mg/m²) by IV infusion on Day 1 of 3-Week cycle up to a maximum of 6 cycles of IV injection until disease progression or unacceptable toxicities.

Primary: Progression Free Survival (PFS) According to Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST v1.1) Assessed by Independent Review Committee (IRC) in High Programmed Death Ligand 1 (PD-L1) + Full Analysis Set (FAS)

End point title	Progression Free Survival (PFS) According to Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST v1.1) Assessed by Independent Review Committee (IRC) in High Programmed Death Ligand 1 (PD-L1) + Full Analysis Set (FAS) ^[1]
End point description: PFS is defined as the time from date of randomization until date of the first documentation of progressive disease (PD) or death due to any cause in the absence of documented PD, whichever occurs first. PD is defined as at least a 20 percent (%) increase in the sum of the longest diameter (SLD), taking as reference the smallest SLD recorded from baseline or the appearance of 1 or more new lesions. PFS was measured using Kaplan-Meier (KM) estimates. High PD-L1+ FAS included all high expression PD-L1+ subjects who were randomized to study intervention. High expression PD-L1+ subjects with greater than or equal to (\geq) 80 percent (%) of tumor cells deemed positive for PD-L1 expression at any staining intensity (1+, 2+, or 3+).	
End point type	Primary
End point timeframe: Time from date of randomization up to data cutoff (assessed up to approximately 71.5 months)	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Endpoint only compares the data of Avelumab and Chemotherapy groups

Secondary: Overall Survival (OS) in Moderate and High Programmed Death Ligand 1 (PD-L1)+ Modified Full Analysis Set (mFAS)

End point title	Overall Survival (OS) in Moderate and High Programmed Death Ligand 1 (PD-L1)+ Modified Full Analysis Set (mFAS) ^[8]
End point description:	
OS is defined as the time from randomization to the date of death, regardless of the actual cause of the subjects death. The subjects who were still alive at the time of data analysis or who were lost to follow-up OS time was censored at the last recorded date that the subject was known to be alive before the data cutoff date. OS was measured using Kaplan-Meier (KM) estimates. Moderate and High PD-L1+ mFAS included all high expression PD-L1+ subjects who were randomized to study intervention after weekly avelumab was included into the randomization allocation. The PD-L1+ subjects with $\geq 50\%$ of tumor cells deemed positive for PD-L1 expression at any staining intensity (1+, 2+, or 3+).	
End point type	Secondary
End point timeframe:	
Time from date of randomization up to data cutoff (assessed up to approximately 71.5 months)	

Notes:

[8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Endpoint only compares the data of Avelumab and Chemotherapy groups

Baseline, End of treatment (Week 283.9)

Notes:

[21] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Endpoint only compares the data of Avelumab and Chemotherapy groups

End point values	Avelumab Weekly	Chemotherapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	71		
Units: score on a scale				
arithmetic mean (standard deviation)	-12.9 (± 21.03)	-4.5 (± 23.30)		

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline in European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Lung Cancer 13 (EORTC QLQ-LC13) at End of Treatment (EOT) in High Programmed Death Ligand 1 (PD-L1)+ Modified HRQoL Analysis Set

End point title	Change From Baseline in European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Lung Cancer 13 (EORTC QLQ-LC13) at End of Treatment (EOT) in High Programmed Death Ligand 1 (PD-L1)+ Modified HRQoL Analysis Set ^[22]
-----------------	---

End point description:

EORTC QLQ-LC13 consisted of 13 questions relating to disease symptoms specific to lung cancer and treatment side effects typical of treatment with chemotherapy and radiotherapy. The EORTC QLQ-LC13 module generated one multiple-item score assessing dyspnea and a series of single item scores assessing coughing, hemoptysis, sore mouth, dysphagia, peripheral neuropathy, alopecia, pain in chest, pain in arms or shoulder and pain in other parts. Score range: 0 (no burden of symptom domain or single symptom item) to 100 (highest burden of symptoms for symptom domains and single items).

High PD-L1+ modified HRQoL analysis set was used. Here, "Overall Number of Subjects Analyzed" signifies those subjects who were evaluable for this outcome measure and "number analyzed" signifies those subjects who were evaluable for specified categories.

Secondary: Number of Subjects with Shift From Baseline to Greater Than or Equal to (>=) Grade 3 in Laboratory Parameter Values Based on National Cancer Institute-Common Terminology Criteria for Adverse Events (NCI-CTCAE), Version 4.03

End point title	Number of Subjects with Shift From Baseline to Greater Than or Equal to (>=) Grade 3 in Laboratory Parameter Values Based on National Cancer Institute-Common Terminology Criteria for Adverse Events (NCI-CTCAE), Version 4.03
-----------------	---

End point description:

Number of subjects with shifts from Baseline values (Grade 0/1/2/3) to abnormal post-baseline values (shift to >= Grade 4) were reported as per NCI-CTCAE, v4.03 graded from Grade 1 to 5. Grade 1: Mild; Grade 2: Moderate; Grade 3: Severe; Grade 4: Life-threatening; Grade 5: Death. Shifts in laboratory parameter (anemia, lymphocyte count decreased, neutrophil count decreased, platelet count decreased, white blood cell count decreased, alanine aminotransferase increased, alkaline phosphatase increased, aspartate aminotransferase increased, blood bilirubin increased, creatine phosphokinase increased, creatinine increased and Hyperglycemia) were reported. The Safety analysis set (Safety-AS) included all randomized subjects who were administered at least one dose of the study medication, that is (i.e.) avelumab or chemotherapy.

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and AEs of Special Interest (AESIs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and AEs of Special Interest (AESIs)
-----------------	---

End point description:

Adverse event (AE) was defined as any untoward medical occurrence in a subject, which does not necessarily have causal relationship with treatment. A serious AE was defined as an AE that resulted in any of the following outcomes: death; life threatening; persistent/significant disability/incapacity; initial or prolonged in subject hospitalization; congenital anomaly/birth defect or was otherwise considered medically important. Any AE that was suspicious to be a potential Immune-related adverse event (irAE) including infusion related reactions were considered AESIs. Number of subjects with TEAEs and AESIs were reported. High PD-L1+ modified HRQoL analysis set was used. Here, "Overall Number of Subjects Analyzed" signifies those subjects who were evaluable for this outcome measure and "number analyzed" signifies those subjects who were evaluable for specified categories.

Secondary: Number of Subjects With Eastern Cooperative Oncology Group (ECOG) Performance: Baseline Score Versus (Vs) Worst Post-baseline Score

End point title	Number of Subjects With Eastern Cooperative Oncology Group (ECOG) Performance: Baseline Score Versus (Vs) Worst Post-baseline Score
-----------------	---

End point description:

ECOG performance status measured to assess subjects performance status on a scale of 0 to 5, where 0 = Fully active, able to carry on all pre-disease activities without restriction; 1 = Restricted in physically strenuous activity, ambulatory and able to carry out light or sedentary work; 2 = Ambulatory and capable of all selfcare but unable to carry out any work activities; 3 = Capable of only limited self-care, confined to bed/chair for more than 50 percent of waking hours; 4 = Completely disabled, cannot carry on any self-care, totally confined to bed/chair; 5 = dead. ECOG performance status was reported in terms of number of participants with baseline value vs worst post-baseline value (that is [i.e.] highest score). The Safety analysis set (Safety-AS) included all randomized subjects who were administered at least one dose of the study medication, that is (i.e.) avelumab or chemotherapy.

End point type	Secondary

Secondary: Number of Subjects With At Least One Positive Anti-Drug Antibodies (ADAs) and Neutralizing Antibodies (NABs) for Avelumab

End point title	Number of Subjects With At Least One Positive Anti-Drug Antibodies (ADAs) and Neutralizing Antibodies (NABs) for Avelumab ^[23]
-----------------	---

End point description:

Serum samples were analyzed by a validated electrochemiluminescence immunoassay to detect the presence of antidrug antibodies (ADA). Samples that screened positive were subsequently tested in a confirmatory assay were tested for neutralizing antibodies (nAb). Number of subjects with ADA or nAb positive results for Avelumab were reported. The Safety analysis set (Safety-AS) included all randomized subjects who were administered at least one dose of the study medication, that is (i.e.) avelumab or chemotherapy.

End point type	Secondary
----------------	-----------

End point timeframe:

Time from date of randomization up to data cutoff (assessed up to approximately 71.5 months)

Notes:

[23] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Endpoint only compares the data of Avelumab and Chemotherapy groups

End point values	Avelumab Biweekly	Avelumab Weekly		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	360	318		
Units: subjects				
ADAs to Avelumab	66	38		
NAbs to Avelumab	43	18

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Time from date of randomization up to data cutoff (assessed up to approximately 71.5 months)

Adverse event reporting additional description:

Only subjects who received study medication were included in the analysis of adverse events. All randomized subjects were included in the analysis of all-cause mortality.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Avelumab Biweekly
-----------------------	-------------------

Reporting group description:

Subjects received Avelumab at a dose of 10 milligrams per kilogram (mg/kg) as a 1-hour (-10/+20 minutes) intravenous (IV) infusion once every 2 weeks until disease progression or unacceptable toxicities.

Reporting group title	Chemotherapy
-----------------------	--------------

Reporting group description:

Subjects with tumor of nonsquamous histology received Pemetrexed in combination with Cisplatin (75 mg/m²) administered on Day 1 of each cycle or pemetrexed (500 mg/m²) in combination with carboplatin AUC 6 milligrams per milliliter minutes administered on Day 1 of each cycle. Subjects who were assigned pemetrexed could continue to receive pemetrexed as a maintenance therapy after 4 cycles of platinum-based chemotherapy if their disease had not progressed. Subjects with tumor of squamous histology received Paclitaxel (200 mg/m²) plus carboplatin (AUC 6 mg/mL * min administered on Day 1 of each cycle) or Gemcitabine (1250 mg/m² administered on Day 1 and Day 8 of each cycle) plus cisplatin (75 mg/m²) or Gemcitabine (1000 mg/m² administered on Day 1 and Day 8 of each cycle) plus carboplatin (AUC 5 mg/mL * min) in 3-week cycles up to a maximum of 6 cycles of IV injection or until disease progression or unacceptable toxicities.

Reporting group title	Avelumab Weekly
-----------------------	-----------------

Reporting group description:

Subjects received Avelumab at a dose of 10 mg/kg as a 1-hour (-10/+20 minutes) IV infusion every week for 12 consecutive weeks, followed by Avelumab at a dose of 10 mg/kg once every 2 weeks until disease progression or unacceptable toxicities.

subjects affected / exposed	5 / 361 (1.39%)	26 / 500 (5.20%)	5 / 318 (1.57%)
occurrences (all)	5	26	5

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 January 2019	Assumptions on PFS drop-out rate were revised.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
