

Clinical trial results:

A phase IV open-label study of predictive markers in growth hormone deficient pre-pubertal children treated with Saizen®

Summary

EudraCT number	2015-001569-20
Trial protocol	Outside EU/EEA
Global end of trial date	20 April 2009

Results information

Result version number	v1 (current)
This version publication date	23 May 2016
First version publication date	05 August 2015

Trial information

Trial identification

Sponsor protocol code	27709

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 April 2009
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 April 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the response between GHD children born appropriate for gestational age (AGA) and those born small for gestation age (SGA) after 4 weeks of Saizen® therapy

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 March 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	China: 214
Worldwide total number of subjects	214
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	214
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Out of 214 subjects enrolled in the study, 1 subject could not be categorized as appropriate for gestational age (AGA) or small for gestational age (SGA) since weight and height at birth was not available.

Period 1

Period 1 title	Overall Study
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
------------------------------	----

Arm title	Appropriate for gestational age (AGA)
------------------	---------------------------------------

Arm description:

Subjects in AGA group received Saizen (recombinant human growth hormone, r-hGH) subcutaneously (sc) at the daily dose of 0.033 milligram/kilogram (mg/kg) body weight for 4 weeks.

Arm type	Experimental
Investigational medicinal product name	Saizen
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Saizen (r-hGH) was administered subcutaneously at the daily dose of 0.033 mg/kg body weight for 4 weeks.

Arm title	Small for gestational age (SGA)
------------------	---------------------------------

Arm description:

Subjects in SGA group received Saizen (r-hGH) sc at the daily dose of 0.033 mg/kg body weight for 4 weeks.

Arm type	Experimental
Investigational medicinal product name	Saizen
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Saizen (r-hGH) was administered subcutaneously at the daily dose of 0.033 mg/kg body weight for 4 weeks.

Number of subjects in period 1	Appropriate for gestational age (AGA)	Small for gestational age (SGA)
Started	183	30
Treated	175	30
Completed	169	29
Not completed	14	1
Randomized but not treated	8	-
Unspecified	3	-
Protocol deviation	3	1

Period 2

Period 2 title	Baseline period
Is this the baseline period?	Yes ^[1]
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Appropriate for gestational age (AGA)

Arm description:

Subjects in AGA group received Saizen (recombinant human growth hormone, r-hGH) subcutaneously (sc) at the daily dose of 0.033 milligram/kilogram (mg/kg) body weight for 4 weeks.

Arm type	Experimental
Investigational medicinal product name	Saizen
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Saizen (r-hGH) was administered subcutaneously at the daily dose of 0.033 mg/kg body weight for 4 weeks.

Investigational medicinal product name	Saizen
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Saizen (r-hGH) was administered subcutaneously at the daily dose of 0.033 mg/kg body weight for 4 weeks.

Arm title	Small for gestational age (SGA)
------------------	---------------------------------

Arm description:

Subjects in SGA group received Saizen (r-hGH) sc at the daily dose of 0.033 mg/kg body weight for 4 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Saizen
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Saizen (r-hGH) was administered subcutaneously at the daily dose of 0.033 mg/kg body weight for 4 weeks.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Out of a total of 213 subjects, data for baseline measure (age) was available for only 205 subjects who were treated. Hence, a separate period is created to add baseline data only.

Number of subjects in period 2^[2]	Appropriate for gestational age (AGA)	Small for gestational age (SGA)
Started	175	30
Completed	169	29
Not completed	6	1
Adverse event	2	-
Unspecified	4	-
Lost to follow-up	-	1

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Out of 214 subjects enrolled in the study, 1 subject could not be categorized as appropriate for gestational age (AGA) or small for gestational age (SGA) since weight and height at birth was not available.

Baseline characteristics

Reporting groups

Reporting group title	Appropriate for gestational age (AGA)
Reporting group description: Subjects in AGA group received Saizen (recombinant human growth hormone, r-hGH) subcutaneously (sc) at the daily dose of 0.033 milligram/kilogram (mg/kg) body weight for 4 weeks.	
Reporting group title	Small for gestational age (SGA)
Reporting group description: Subjects in SGA group received Saizen (r-hGH) sc at the daily dose of 0.033 mg/kg body weight for 4 weeks.	

Reporting group values	Appropriate for gestational age (AGA)	Small for gestational age (SGA)	Total
Number of subjects	175	30	205
Age categorical Units: Subjects			
Age Continuous			
Out of a total of 213 subjects data for baseline measure (age) was available for only 205 subjects who were treated.			
Units: years			
arithmetic mean	10.52	9.39	
standard deviation	± 3.844	± 4.349	-
Gender, Male/Female			
Out of a total of 213 subjects, data for baseline measure (gender) was available for only 205 subjects who were treated.			
Units: participants			
Female	46	6	52
Male	129	24	153

End points

End points reporting groups

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events (AEs) are collected on an ongoing basis from day of written informed consent. All new AEs must be recorded until 4 weeks post drug administration. AEs are classified as pre-treatment, treatment-emergent and post-treatment.

Adverse event reporting additional description:

Pre-Treatment: Medical conditions present at initial study visit that did not worsen in severity or frequency during study; Treatment-Emergent: If onset date of AE was on or after the first dose date of the study medication; Post-Treatment: If the onset date of AE was post 4 weeks after drug administration for subjects who completed the study.

Assessment type	Non-systematic
