

Clinical trial results:

A Randomized, Placebo-controlled, 2-way Crossover, Double-blind Study to Evaluate the Efficacy, Safety and Tolerability of JNJ-42847922 in Subjects With Insomnia Disorder Without Psychiatric Comorbidity.

Summary

EudraCT number	2015-001672-22
Trial protocol	DE NL
Global end of trial date	02 December 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 December 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 December 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of the study was to investigate the effect of JNJ-42847922 (change versus placebo) on sleep efficiency (SE), defined as total sleep time (TST) / time in bed (TIB), measured by polysomnography (PSG) after single and multiple dose administration to subjects with insomnia disorder without psychiatric comorbidity.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. Safety and tolerability evaluations were based upon physical examinations, vital signs, electrocardiogram (ECGs), urine drug and pregnancy testing, clinical labs (hematology, chemistry panel, and urinalysis), cognitive test battery, columbia suicide severity rating scale (C-SSRS), bond and ladder visual analogue scale, karolinska sleepiness scale (KSS) and adverse events (AEs) /serious adverse events (SAEs) were reported throughout the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 15
Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	United States: 8
Worldwide total number of subjects	28
EEA total number of subjects	20

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	28
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 28 subjects with insomnia without psychiatric comorbidity received the study treatment, out of which 27 subjects completed the study.

Period 1

Period 1 title	Crossover Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo followed by JNJ-42847922

Arm description:

Subjects received Placebo once daily (qd) for 5 days in treatment Period 1 followed by 40 milligram (mg) JNJ-42847922 qd for 5 days in treatment Period 2 via oral route. Both the treatment periods were separated by a washout period of minimum 5 days.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received JNJ-42847922 matching Placebo tablets qd for 5 days via oral route.

Investigational medicinal product name	JNJ-42847922
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 40 milligram (mg) JNJ-42847922 (2 x 20-mg tablets) qd for 5 days via oral route.

Arm title	JNJ-42847922 followed by Placebo
------------------	----------------------------------

Arm description:

Subjects received 40 mg JNJ-42847922 once daily (qd) for 5 days in treatment Period 1 followed by Placebo qd for 5 days in treatment period 2 via oral route. Both the treatment periods were separated by a washout period of minimum 5 days.

Arm type	Experimental
Investigational medicinal product name	JNJ-42847922
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 40 mg JNJ-42847922 (2 x 20-mg tablets) via qd for 5 days via oral route.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received JNJ-428479225 matching Placebo tablets qd for 5 days via oral route.

Secondary: Leeds Sleep Evaluation Questionnaire (LSEQ) Score

End point title	Leeds Sleep Evaluation Questionnaire (LSEQ) Score
End point description: The LSEQ is a participant-reported 10-item visual analogue scale score used to rate the quality of sleep and to assess changes in sleep quality over the course of treatment. This questionnaire has 10 selfrating 100 mm line analogue questions concerning sleep and early morning behavior. The higher the score, i.e. the closer the value is to 100 the worse the rating by the participant. The 10 responses are grouped into 4 subscores: the ease of getting to sleep, the perceived quality of sleep, the ease of awakening from sleep and the integrity of behavior following wakefulness. Sleep efficiency was evaluated using Intention to Treat Analysis Set.	
End point type	Secondary

Secondary: Subjective Assessment of Sleep by Questionnaire

End point title	Subjective Assessment of Sleep by Questionnaire
End point description:	
Subjective assessment of sleep parameters was assessed by following questions to indicate how much and how well participant slept during the past night: 1. How long did it take you to fall asleep for the first time (Mean Subjective sleep onset latency); 2. How long have you slept in total (Total sleep time); 3. How long were you awake after initial sleep onset until you finally got out of bed (Wake After Sleep Onset); 4. How often did you awake during the night (how many times); 5. How did you rate the quality of the night sleep (1= extremely bad 10 =excellent). Sleep efficiency was evaluated using Intention to Treat Analysis Set.

Secondary: Next Morning Residual Effects by Karolinska Sleepiness Scale

End point title	Next Morning Residual Effects by Karolinska Sleepiness Scale
End point description:	
The Karolinska Sleepiness Scale is a participant-reported assessment used to rate sleepiness on a scale of 1 to 9, ranging from 'extremely alert' (1) to 'very sleepy, great effort to keep awake, fighting sleep. This endpoint was evaluated using Safety analysis set.	
End point type	Secondary
End point timeframe:	
Up to Day 6	

End point values	Placebo	40 mg JNJ-42847922		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	28	27		
Units: Units on a scale				
arithmetic mean (standard deviation)				
Day 2	5.43 (± 1.399)	4.85 (± 1.433)		
Day 6	4.71 (± 1.607)	3.89 (± 1.368)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline, up to Follow-up (61 Days)

Adverse event reporting additional description:

The Adverse events were reported on Safety Analysis Set population.

Assessment type	Non-systematic
-----------------	----------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18.1
--------------------	------

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received JNJ-42847922 matching Placebo tablets once daily for 5 days via oral route.

Reporting group title	40 mg JNJ-42847922
-----------------------	--------------------

Reporting group description:

Subjects received 40 milligram (mg) JNJ-42847922 (2 x 20-mg tablets) once daily for 5 days via oral route.

Serious adverse events	Placebo	40 mg JNJ-42847922	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 28 (0.00%)	0 / 27 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events			

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Placebo	40 mg JNJ-42847922	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	6 / 28 (21.43%)	8 / 27 (29.63%)	
Nervous system disorders			
Headache			
subjects affected / exposed	3 / 28 (10.71%)	4 / 27 (14.81%)	
occurrences (all)	3	5	
Somnolence			
subjects affected / exposed	2 / 28 (7.14%)	3 / 27 (11.11%)	
occurrences (all)	2	3	
Psychiatric disorders			

Abnormal dreams subjects affected / exposed occurrences (all)	0 / 28 (0.00%) 0	2 / 27 (7.41%) 4	
Infections and infestations Nasopharyngitis subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 2	1 / 27 (3.70%) 1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 August 2014	A combination of a hormonal contraceptive with a pearl-index less than (<) 1 percent (%) in addition to a barrier method are required for use with an investigational compound for which no reproductive toxicology studies have been completed. References to "Observed significant mean differences (active to placebo) for Sleep efficiency (SE)" have specified. To comply with German privacy regulations, no full date of birth was documented to identify a study subject.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
