Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 April 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 March 2017
Global end of trial reached?	Yes
Global end of trial date	09 March 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to determine the difference in 24 hr cough counts measured using the Hull Automated Cough Counter (HACC), from baseline and after two weeks and four weeks treatment with either montelukast or prednisolone followed by montelukast in patients with FeNO ≥ 30 ppb at screening or montelukast in patients with normal NO measurement of ≤ 20 ppb.

Protection of trial subjects:

All the measurements has been followed according the approved SOP and a study doctor was available during the visits if it was needed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 50
Worldwide total number of subjects	50
EEA total number of subjects	50

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	38
From 65 to 84 years	12
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

50 non-asthmatic patients with chronic cough were recruited sequentially from a specialist cough clinic. 30 patients with FeNO ≥ 30 ppb were randomised to either two weeks prednisolone 20mg or two weeks montelukast 10mg followed by montelukast 10mg for the subsequent two weeks. 20 patients with low FeNO ≤ 20 received four weeks montelukast.

Pre-assignment

Screening details:

Patients with a history of chronic cough at least 8 weeks duration were included. Subjects with the following criteria were excluded ; current diagnosis of classic asthma, any significant concomitant disease, a lower respiratory tract infection in the last 4 weeks, subjects who were taking ACE and current smokers.

Period 1

Period 1 title	V1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Blinding was not applicable to the period.

Arms

Are arms mutually exclusive?	Yes
Arm title	First Arm, High FeNO

Arm description:

Following baseline assessments 30 eligible subjects with FeNO ≥ 30 were randomized in a 1:1 ratio to receive either two weeks montelukast 10mg film-coated tablets or prednisolone 20mg tablets followed by montelukast 10 mg film-coated tablets for the subsequent two weeks in both arms. Allocation was performed by Research & Development Department based on a balanced block randomisation scheme, which was prepared using computerised system – sealed envelope, which was prepared using computerised system – sealed envelope.

Subject in the first Arm High FeNO were received 4 weeks Montelukast.

Arm type	Active comparator
Investigational medicinal product name	Montelukast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Four weeks montelukast 10mg once daily.

Arm title	Second Arm High FeNO
------------------	----------------------

Arm description:

Following baseline assessments 30 eligible subjects with FeNO ≥ 30 were randomized in a 1:1 ratio to receive either two weeks montelukast 10mg film-coated tablets or prednisolone 20mg tablets followed by montelukast 10 mg film-coated tablets for the subsequent two weeks in both arms. Allocation was performed by Research & Development Department based on a balanced block randomisation scheme, which was prepared using computerised system – sealed envelope, which was prepared using computerised system – sealed envelope.

Subject in the second Arm High FeNO were received two weeks prednisolone 20mg tablets followed by two weeks montelukast 10 mg film-coated tablets.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Prednisolone & Montelukast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Two weeks prednisolone 20mg once a day followed by two weeks Montelukast 10mg per day.	
Arm title	Low FeNO

Arm description:

A control group of 20 patients with low FeNO (≤ 20 ppb) were enrolled who received four weeks Montelukast 10 mg.

Arm type	Active comparator
Investigational medicinal product name	Montelukast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Four weeks montelukast 10mg once daily.

Number of subjects in period 1^[1]	First Arm, High FeNO	Second Arm High FeNO	Low FeNO
Started	15	15	20
Baseline	15	15	20
Completed	15	14	20
Not completed	0	1	0
Transferred to other arm/group	-	1	-

Notes:

[1] - The number of subjects transferring in and out of the arms in the period are not the same. It is expected the net number of transfers in and out of the arms in a period, will be zero.

Justification: In the Second arm high FeNO one of the subjects was wrongly randomized to the High FeNO group while the subject had a Low FeNO. Therefore transferred to the low FeNO group. 15 subject randomized to the second arm high FeNO group but only 14 subjects completed the baseline visit.

Period 2

Period 2 title	V3
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The blinding was not applicable to the period.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	First Arm, High FeNO
Arm description:	
Following baseline assessments 30 eligible subjects with FeNO \geq 30 were randomized in a 1:1 ratio to receive either two weeks montelukast 10mg film-coated tablets or prednisolone 20mg tablets followed by montelukast 10 mg film-coated tablets for the subsequent two weeks in both arms. Allocation was performed by Research & Development Department based on a balanced block randomisation scheme, which was prepared using computerised system – sealed envelope, which was prepared using computerised system – sealed envelope.	
Subject in the first Arm High FeNO were received 4 weeks Montelukast.	
Arm type	Active comparator
Investigational medicinal product name	Montelukast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Four weeks montelukast 10mg once daily.	
Arm title	Second Arm High FeNO

Arm description:

Following baseline assessments 30 eligible subjects with FeNO \geq 30 were randomized in a 1:1 ratio to receive either two weeks montelukast 10mg film-coated tablets or prednisolone 20mg tablets followed by montelukast 10 mg film-coated tablets for the subsequent two weeks in both arms. Allocation was performed by Research & Development Department based on a balanced block randomisation scheme, which was prepared using computerised system – sealed envelope, which was prepared using computerised system – sealed envelope.

Subject in the second Arm High FeNO were received two weeks prednisolone 20mg tablets followed by two weeks montelukast 10 mg film-coated tablets.

Arm type	Active comparator
Investigational medicinal product name	Prednisolone & Montelukast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Two weeks prednisolone 20mg once a day followed by two weeks Montelukast 10mg per day.	

Arm title	Low FeNO
Arm description:	
A control group of 20 patients with low FeNO (\leq 20 ppb) were enrolled who received four weeks Montelukast 10 mg.	
Arm type	Active comparator
Investigational medicinal product name	Montelukast
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Four weeks montelukast 10mg once daily.	

Number of subjects in period 2 ^[2]	First Arm, High FeNO	Second Arm High FeNO	Low FeNO
Started	14	14	20
Two weeks therapy	14	14	20
Completed	14	14	20

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: In the second period after two weeks therapy in first arm 14, second arm 14 and third arm 20 patients completed the visit. One subject from third arm was withdraw from the study.

Period 3

Period 3 title	V5
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The blinding was not applicable to the period.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The AE reporting period for this trial begins as soon as patients have consented to the trial and ends 30 days after the patients final study medication visit.

The health status of subjects were checked at each study visit.

Adverse event reporting additional description:

The investigator recorded all directly observed AEs and all AEs spontaneously reported by the trial subject.

All adverse events were recorded by the investigator in patients data collection forms (CRFs) using R&D's adverse event report form. All adverse events were recorded by the investigator in patients' medical notes.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The results shown a significant reduction in cough frequency in the low FeNO group. To confirm effectiveness of montelukast in cough patients without presence of eosinophilic biomarkers there is a need for a large placebo controlled study.

Notes:
