

## Clinical trial results:

### A Confirmatory (Phase 3) Randomized, Double-blind, Multicenter Study to Evaluate Efficacy, Safety, and Immunogenicity of M923 (a Proposed Adalimumab Biosimilar) and Humira® in Subjects with Moderate to Severe Chronic Plaque-type Psoriasis

#### Summary

EudraCT number	2015-001751-76
Trial protocol	SK CZ DE LV EE HU PL
Global end of trial date	04 April 2017

#### Results information

Result version number	v1 (current)
This version publication date	24 August 2018
First version publication date	24 August 2018

#### Trial information

##### Trial identification

Sponsor protocol code	911401
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02581345
WHO universal trial number (UTN)	-

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 April 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to demonstrate equivalence in measures of efficacy between M923 (test) and European Union (EU)-licensed Humira (referred to as the EU Reference Protein Product (EU RPP)) in participants with moderate to severe chronic plaque-type psoriasis.

Protection of trial subjects:

This study was conducted in accordance with the protocol, the International Council for Harmonization Guideline for Good Clinical Practice E6 (ICH GCP, April 1996), Title 21 of the US Code of Federal Regulations (US CFR), the European Clinical Trial Directive (2001/20/EC and 2005/28/EC), and applicable national and local regulatory requirements. Aspects of the study concerned with the investigational medicinal product (IMP) met the requirements of EU Good Manufacturing Practice (GMP).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Slovakia: 11
Country: Number of subjects enrolled	Bulgaria: 35
Country: Number of subjects enrolled	Czech Republic: 90
Country: Number of subjects enrolled	Estonia: 58
Country: Number of subjects enrolled	Germany: 15
Country: Number of subjects enrolled	Latvia: 35
Country: Number of subjects enrolled	Poland: 180
Country: Number of subjects enrolled	Canada: 74
Country: Number of subjects enrolled	United States: 74
Worldwide total number of subjects	572
EEA total number of subjects	424

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	531
From 65 to 84 years	41
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 572 participants were enrolled and randomized equally into M923 and European Union reference protein product (EU RPP) arms. One participant in each arm did not receive any treatment. The 263 participants completing EU RPP treatment in Part 1 were randomized to 1 of 2 treatment arms in Part 2 (Transition and Continuous).

### Period 1

Period 1 title	Part 1: up to Week 16
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 1: M923

Arm description:

Participants received 80 milligrams (mg) M923 (recombinant human immunoglobulin G subclass 1 [IgG1] monoclonal antibody specific for human tumor necrosis factor- $\alpha$  [TNF- $\alpha$ ]) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.

Arm type	Experimental
Investigational medicinal product name	M923
Investigational medicinal product code	
Other name	Adalimumab
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 80 milligrams (mg) M923 at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.

<b>Arm title</b>	Part 1: EU RPP
------------------	----------------

Arm description:

Participants received 80 mg European Union Reference Protein Product (EU RPP) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.

Arm type	Active comparator
Investigational medicinal product name	EU RPP
Investigational medicinal product code	
Other name	Humira, Adalimumab
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received 80 mg EU RPP at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.

Number of subjects in period 1	Part 1: M923	Part 1: EU RPP
Started	286	286
Completed	271	263
Not completed	15	23
Consent withdrawn by subject	4	7
Physician decision	2	4
Adverse event, non-fatal	3	8
Unspecified reason	3	3
Lost to follow-up	2	-
Did not receive treatment	1	1

## Period 2

Period 2 title	Part 2: Week 17 to Week 47
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Part 2: M923

### Arm description:

Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection.

Arm type	Experimental
Investigational medicinal product name	M923
Investigational medicinal product code	
Other name	Adalimumab
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

### Dosage and administration details:

Participants received 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection.

<b>Arm title</b>	Part 2: Transition EU RPP
------------------	---------------------------

### Arm description:

At Week 17, participants who received EU RPP in Part 1 transitioned from EU RPP to M923 (40 mg every 2 weeks), then to EU RPP at Week 25 (40 mg every 2 weeks), and then to M923 at Week 37 (last dose at Week 47).

Arm type	M923 and EU RPP
Investigational medicinal product name	EU RPP
Investigational medicinal product code	
Other name	Humira, Adalimumab
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Participants received 40 mg EU RPP every 2 weeks from Week 25 to Week 36 as a subcutaneous injection.

Investigational medicinal product name	M923
Investigational medicinal product code	
Other name	Adalimumab
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Participants received 40 mg M923 every 2 weeks from Week 17 to Week 24 and Week 37 to Week 48 (last dose at Week 47) as a subcutaneous injection.

<b>Arm title</b>	Part 2: Continuous EU RPP
------------------	---------------------------

**Arm description:**

Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection.

Arm type	Experimental
Investigational medicinal product name	EU RPP
Investigational medicinal product code	
Other name	Humira, Adalimumab
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Participants received 40 mg EU RPP every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection.

<b>Number of subjects in period 2</b>	Part 2: M923	Part 2: Transition EU RPP	Part 2: Continuous EU RPP
Started	271	132	131
Completed	242	117	119
Not completed	29	15	12
Consent withdrawn by subject	9	7	5
Physician decision	3	2	1
Adverse event, non-fatal	5	2	2
Failure to achieve at least a PASI 50	8	3	2
Unspecified reason	2	1	1
Lost to follow-up	2	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Part 1: M923
Reporting group description:	
Participants received 80 milligrams (mg) M923 (recombinant human immunoglobulin G subclass 1 [IgG1] monoclonal antibody specific for human tumor necrosis factor- $\alpha$ [TNF- $\alpha$ ]) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.	
Reporting group title	Part 1: EU RPP
Reporting group description:	
Participants received 80 mg European Union Reference Protein Product (EU RPP) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.	

Reporting group values	Part 1: M923	Part 1: EU RPP	Total
Number of subjects	286	286	572
Age categorical			
Units: Subjects			

Age continuous			
Units: years			
arithmetic mean	44.6	45.5	
standard deviation	$\pm 12.4$	$\pm 12.9$	-
Gender categorical			
Units: Subjects			
Female	95	100	195
Male	191	186	377
Race (NIH/OMB)			
Units: Subjects			
American Indian or Alaska Native	0	1	1
Asian	2	1	3
Native Hawaiian or Other Pacific Islander	0	0	0
Black or African American	3	1	4
White	281	282	563
More than one race	0	0	0
Unknown or Not Reported	0	1	1
Number of Participants with the indicated Static Physician's Global Assessment (sPGA) Score			
The sPGA is a 6-point scale ranging from 0 (clear) to 5 (very severe) used to measure the severity of disease (induration, scaling, and erythema). Analysis was conducted using the Modified Intent-to-treat (mITT) Analysis Set including all consenting subjects randomized to study treatment (Arm A or Arm B) and contributed post-baseline data for at least one efficacy endpoint.			
Units: Subjects			
Moderate	170	182	352
Severe	103	91	194
Very Severe	12	12	24
Missing	1	1	2
Clear	0	0	0
Almost Clear	0	0	0
Mild	0	0	0

Psoriasis Area and Severity Index (PASI) Score			
The PASI measures the average redness (erythema), thickness (induration), and scaliness [each graded on a scale of 0 (no disease) to 4 (very severe)] of psoriasis lesions, weighted by the area of involvement. The total PASI score ranges from 0 to 72. The higher the total score, the more severe the disease. Analysis was conducted using the mITT Analysis Set.			
Units: Units on a scale			
arithmetic mean	21.24	20.16	
standard deviation	± 9.27	± 8.16	-

## End points

### End points reporting groups

Reporting group title	Part 1: M923
Reporting group description: Participants received 80 milligrams (mg) M923 (recombinant human immunoglobulin G subclass 1 [IgG1] monoclonal antibody specific for human tumor necrosis factor- $\alpha$ [TNF- $\alpha$ ]) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.	
Reporting group title	Part 1: EU RPP
Reporting group description: Participants received 80 mg European Union Reference Protein Product (EU RPP) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.	
Reporting group title	Part 2: M923
Reporting group description: Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection.	
Reporting group title	Part 2: Transition EU RPP
Reporting group description: At Week 17, participants who received EU RPP in Part 1 transitioned from EU RPP to M923 (40 mg every 2 weeks), then to EU RPP at Week 25 (40 mg every 2 weeks), and then to M923 at Week 37 (last dose at Week 47).	
Reporting group title	Part 2: Continuous EU RPP
Reporting group description: Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection.	
Subject analysis set title	Part 1: M923
Subject analysis set type	Per protocol
Subject analysis set description: The Participants received 80 milligrams (mg) M923 (recombinant human immunoglobulin G subclass 1 [IgG1] monoclonal antibody specific for human tumor necrosis factor- $\alpha$ [TNF- $\alpha$ ]) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection. The analysis was performed using Per Protocol (PP) Analysis Set defined as a subgroup of the Intent-To-Treat (ITT) Analysis Set that included all participants who did not have any deviations from the protocol deemed significant enough for exclusion from the efficacy analysis and received at least 1 dose of study drug.	
Subject analysis set title	Part 1: EU RPP
Subject analysis set type	Per protocol
Subject analysis set description: Participants received 80 mg European Union Reference Protein Product (EU RPP) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection. The analysis was performed using PP Analysis Set.	
Subject analysis set title	Part 2: M923
Subject analysis set type	Per protocol
Subject analysis set description: Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection. The analysis was performed using PP Analysis Set.	
Subject analysis set title	Part 2: Transition EU RPP
Subject analysis set type	Per protocol
Subject analysis set description: Participants who received EU RPP in Part 1 transitioned from EU RPP to M923 (40 mg every 2 weeks) at Week 17, then to EU RPP at Week 25 (40 mg every 2 weeks), and then to M923 at Week 37 (last dose at Week 47). The analysis was performed using PP Analysis Set.	
Subject analysis set title	Part 2: Continuous EU RPP
Subject analysis set type	Per protocol
Subject analysis set description: Participants who received EU RPP in Part 1 continued to receive EU RPP (40 mg every 2 weeks) from	

Week 17 to Week 48 (last dose at Week 47). The analysis was performed using PP Analysis Set.

Subject analysis set title	Part 1: M923
Subject analysis set type	Safety analysis

Subject analysis set description:

Participants received 80 mg M923 at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection. The analysis was performed using Safety Analysis Set (SAS), which included all participants who received at least 1 dose of study drug.

Subject analysis set title	Part 1: EU RPP
Subject analysis set type	Safety analysis

Subject analysis set description:

Participants received 80 mg European Union Reference Protein Product (EU RPP) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection. The analysis was performed using SAS.

Subject analysis set title	Part 2: M923
Subject analysis set type	Safety analysis

Subject analysis set description:

Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection. The analysis was performed using SAS.

Subject analysis set title	Part 1 and Part 2: M923
Subject analysis set type	Safety analysis

Subject analysis set description:

Participants received 80 mg M923 at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 48 as a subcutaneous injection. The analysis was performed using SAS.

Subject analysis set title	Part 2: Transition EU RPP
Subject analysis set type	Safety analysis

Subject analysis set description:

Participants who received EU RPP in Part 1 transitioned from EU RPP to M923 (40 mg every 2 weeks) at Week 17, then to EU RPP at Week 25 (40 mg every 2 weeks), and then to M923 at Week 37 (last dose at Week 47). The analysis was performed using SAS.

Subject analysis set title	Part 2: Continuous EU RPP
Subject analysis set type	Safety analysis

Subject analysis set description:

Participants who received EU RPP in Part 1 continued to receive EU RPP (40 mg every 2 weeks) from Week 17 to Week 48 (last dose at Week 47). The analysis was performed using SAS.

Subject analysis set title	Part 1: M923
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants received 80 mg M923 at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection. The analysis was performed using Pharmacokinetic (PK) Analysis Set, which included all participants who received at least 1 dose of study drug and had at least 1 measured concentration at a scheduled PK time point after start of dosing. Only participants with available data were analyzed.

Subject analysis set title	Part 1: EU RPP
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants received 80 mg EU RPP at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection. The analysis was performed using PK Analysis Set.

Subject analysis set title	Part 2: M923
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection. The analysis was performed using PK Analysis Set.

Subject analysis set title	Part 2: Transition EU RPP
Subject analysis set type	Sub-group analysis

Participants who received EU RPP in Part 1 transitioned from EU RPP to M923 (40 mg every 2 weeks) At Week 17, then to EU RPP at Week 25 (40 mg every 2 weeks), and then to M923 at Week 37 (last dose at Week 47). The analysis was performed using PK Analysis Set.

Subject analysis set title	Part 2: Continuous EU RPP
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants who received EU RPP in Part 1 continued to receive EU RPP (40 mg every 2 weeks) from Week 17 to Week 48 (last dose at Week 47). The analysis was performed using PK Analysis Set.

### **Primary: Percentage of Participants Who Achieved a 75% Reduction in Psoriasis Area and Severity Index (PASI) (PASI 75) Scores at Week 16**

End point title	Percentage of Participants Who Achieved a 75% Reduction in Psoriasis Area and Severity Index (PASI) (PASI 75) Scores at Week 16
-----------------	---

End point description:

The PASI combines assessments of the extent of body surface involvement in 4 anatomical regions (head, arms, trunk, and legs) and the severity of scaling, redness, and thickness in each region, yielding an overall score of 0 for no disease to 72 for the most severe disease. Each of the body areas was scored by itself, and then the 4 scores were combined into the final PASI score. Participants achieving PASI 75 are defined as having an improvement (reduction) of at least 75% in the Week 16 PASI score compared to the score at Baseline. The analysis was performed using PP Analysis Set.

End point type	Primary

Units: Percentage of participants				
number (confidence interval 95%)	80.1 (74.9 to 84.8)	79.0 (73.6 to 83.7)		

### **Statistical analyses**

Statistical analysis title	Statistical Analysis 1
Comparison groups	Part 1: M923 v Part 1: EU RPP
Number of subjects included in analysis	538
Analysis specification	Pre-specified
Analysis type	equivalence <sup>[1]</sup>
Parameter estimate	Difference in proportion (M923 - EU RPP)
Point estimate	0.014
Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.043
upper limit	0.072

Notes:

[1] - Per Food and Drug Administration (FDA), the equivalence testing was made using 90% confidence interval and an equivalence margin of 18%.

<b>Statistical analysis title</b>	Statistical Analysis 2
Comparison groups	Part 1: M923 v Part 1: EU RPP
Number of subjects included in analysis	538
Analysis specification	Pre-specified
Analysis type	equivalence <sup>[2]</sup>
Parameter estimate	Difference in proportion (M923 - EU RPP)
Point estimate	0.014
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.054
upper limit	0.082

Notes:

[2] - Per European Medicines Agency (EMA), the equivalence testing was made using 95% confidence interval and an equivalence margin of 15%.

### **Secondary: Percentage of Participants With a Response of Clear or Almost Clear on the Static Physician Global Assessment (sPGA) at Week 16**

End point title	Percentage of Participants With a Response of Clear or Almost Clear on the Static Physician Global Assessment (sPGA) at Week 16
-----------------	---

End point description:

The sPGA response rate was defined as the percentage of participants who had achieved a clear or almost clear response on the 6-point sPGA scale. The sPGA was the physician's determination of the participant's psoriasis lesions overall at a given time point. Overall lesions were categorized by descriptions for induration, erythema, and scaling. For the analysis of responses, the participant's psoriasis was assessed at a given time point on a 6-point scale on which 0 = cleared, 1 = minimal, 2 = mild, 3 = moderate, 4 = severe, and 5 = very severe. Analysis was performed using PP Analysis Set.

End point type	Secondary

**End point description:**

The PASI combines assessments of the extent of body surface involvement in 4 anatomical regions (head, arms, trunk, and legs) and the severity of scaling, redness, and thickness in each region, yielding an overall score of 0 for no disease to 72 for the most severe disease. Each of the body areas was scored by itself, and then the 4 scores were combined into the final PASI score. Participants achieving PASI 75 are defined as having an improvement (reduction) of at least 75% compared to Baseline. Analysis was performed using PP Analysis Set. Only those participants contributing data at Week 52 were analyzed.

## Secondary: Health-Related Quality of Life During Treatment: Dermatology Life Quality Index (DLQI) Score at Baseline

End point title	Health-Related Quality of Life During Treatment: Dermatology Life Quality Index (DLQI) Score at Baseline
-----------------	--

End point description:

The DLQI score was calculated by summing the individual scores of each question at a given time point, resulting in a maximum score of 30 and a minimum score of 0. The higher the score, the more quality of life is impaired. For the analysis of responses, the participant's results were assessed on a scoring scale on which 3 = very much or yes (applicable to question 7 only), 2 = a lot, 1 = a little, 0 = not at all or not relevant. Interpretation of DLQI scoring can be taken as 0 – 1 = no effect at all on participant's life, 2 – 5 = small effect on participant's life, 6 – 10 = moderate effect on participant's life, 11 – 20 = very large effect on participant's life, and 21 – 30 = extremely large effect on participant's life. Analysis was performed using PP Analysis Set including participants with evaluable data for part 1 and part 2 of the study.

### Reporting groups

Reporting group title	Part 1: M923
-----------------------	--------------

Reporting group description:

Participants received 80 milligrams (mg) M923 (recombinant human immunoglobulin G subclass 1 [IgG1] monoclonal antibody specific for human tumor necrosis factor- $\alpha$  [TNF- $\alpha$ ]) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.

Reporting group title	Part 2: M923
-----------------------	--------------

Reporting group description:

Participants who received M923 in Part 1 continued to receive 40 mg M923 every 2 weeks from Week 17 to Week 48 (last dose at Week 47) as a subcutaneous injection.

Reporting group title	Part 2: Transition EU RRP
-----------------------	---------------------------

Reporting group description:

At Week 17, participants who received EU RPP in Part 1 transitioned from EU RPP to M923 (40 mg every 2 weeks), then to EU RPP at Week 25 (40 mg every 2 weeks), and then to M923 at Week 37 (last dose at Week 47).

Reporting group title	Part 1: EU RPP
-----------------------	----------------

Reporting group description:

Participants received 80 mg European Union Reference Protein Product (EU RPP) at Baseline (Week 0) and 40 mg every 2 weeks from Week 1 to Week 16 as a subcutaneous injection.

Reporting group title	Part 2: Continuous EU RRP
-----------------------	---------------------------

Reporting group description:

Participants who received EU RPP in Part 1 continued to receive EU RPP (40 mg every 2 weeks) from Week 17 to Week 48 (last dose at Week 47).

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 July 2015	<p>Summary of Significant Changes Adopted with Protocol Amendment 1</p> <ul style="list-style-type: none"><li>• Clarified that the European Union reference protein product (EU RPP) is not an approved product in the United States.</li><li>• In response to Food and Drug Administration (FDA) feedback/guidance:<ul style="list-style-type: none"><li>- Primary endpoint analysis revised to occur at Week 16 instead of Week 13</li><li>- Treatment Arm C eliminated</li><li>- Efficacy, safety, Pharmacokinetic (PK), and immunogenicity objectives were revised to reflect the examination of the transitions between M923 and EU RPP, rather than interchangeability</li><li>- The PK sub-study was removed</li><li>- The use of the terms "similar/biosimilar/or comparable" were removed or revised to adhere to FDA guidance regarding conclusory statements in the study protocol</li></ul></li><li>• The study drug injection parameters were revised to reflect a 2-hour observation period after Weeks 0, 1, 17, 25, and 37, and a 30 minute observation period after injections at Weeks 19, 21, 27, and 39</li><li>• The biostatistical analysis was revised to reflect the change in primary efficacy from Week 13 to Week 16, to clarify the response rate justification, and to apply the change in equivalence margin to include 18% (Confidence Interval [CI] 90%) for the US FDA and 15% (CI 95%) for the EU EMA</li><li>• Timing of the following assessments was revised: Dermatology Life Quality Index (DLQI) and EuroQoL-5 dimensions Health Status Questionnaire (EQ 5D 5L); physical examination; 12 lead electrocardiogram (ECG); urinalysis, PK and immunogenicity; laboratory assessments; urine pregnancy tests; study drug injections onsite and at home; injection site evaluation, and post injection monitoring.</li></ul>
08 October 2015	<p>Summary of Significant Change Adopted with Protocol Amendment 2</p> <ul style="list-style-type: none"><li>• The use of the terms "similar/biosimilar/comparable" were removed/revised in order to adhere to FDA guidance regarding conclusory statements in the study protocol or Investigator's Brochure.</li></ul>

04 August 2016	<ul style="list-style-type: none"> <li>•To clarify the study objectives:</li> <li>-The primary objective was changed from “to demonstrate equivalent efficacy between M923 (test) and EU RPP (reference) in participants with moderate to severe chronic plaque type psoriasis” to “to demonstrate equivalence in measures of efficacy between M923 (test) and EU RPP (reference) in participants with moderate to severe chronic plaque type psoriasis”</li> <li>-The secondary objective was changed from “Evaluate the safety, immunogenicity, and tolerability of M923 compared with EU RPP” to “Evaluate the continued efficacy, safety, immunogenicity, and tolerability of M923 compared with EU RPP”</li> <li>-The secondary objective was changed from “Evaluate exposure of EU RPP and M923” to “Evaluate concentration summaries over time”</li> <li>•Changes were made to Section 8.4, Outcome Measures to clarify the outcome measures and how they were to be measured</li> <li>•Changes to study entry criteria were made:</li> <li>-To clarify the maximum period where male partners should use a condom</li> <li>-To clarify that the subject must have had no major deviations regarding concomitant medication</li> <li>-To clarify the type of imaging exam acceptable for this study (i.e., “a radiograph or comparable imaging with negative finding for TB or other similar infections”)</li> <li>•To clarify all non-permitted treatments, topical treatments containing acetylsalicylic acid were included in the list of treatments not permitted during the course of the study</li> <li>•It was added that after the discontinuation visit, if the subject agreed, a Follow-up Visit was to be conducted 5 weeks after last IP dose</li> <li>•It was clarified that the interim analysis was to be done for the first randomized subjects and would analyze primary endpoint data, PK, and safety up through Week 25. It was also clarified that the final analysis was to be carried out in all subjects recruited (n=572).</li> </ul> <p>Note: The summary of change is not all-inclusive.</p>
