Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 July 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	02 February 2021
Global end of trial reached?	Yes
Global end of trial date	13 July 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to evaluate the safety and efficacy of avelumab when combined with either crizotinib or lorlatinib (PF-06463922).

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of trial subjects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 December 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 11
Country: Number of subjects enrolled	Japan: 7
Country: Number of subjects enrolled	Korea, Republic of: 10
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	43
EEA total number of subjects	6

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	34
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 66 subjects were screened, and 43 subjects were enrolled into the study.

Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Group A: Avelumab + Crizotinib

Arm description:

Subjects with locally advanced or metastatic Anaplastic Lymphoma Kinase (ALK)-negative non-small cell lung cancer (NSCLC) received avelumab 10 mg/kg as a 1-hour intravenous (IV) infusion once every 2 weeks (Day 1 of each cycle) and crizotinib 250 mg orally twice a day (BID) on a continuous daily dosing schedule.

Arm type	Experimental
Investigational medicinal product name	Avelumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

The subjects received avelumab 10 mg/kg as a 1-hour intravenous (IV) infusion once every 2 weeks (Day 1 of each cycle)

Investigational medicinal product name	Crizotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The subjects received crizotinib 250 mg (starting dose) orally twice a day (BID).

Arm title	Group B: Avelumab + Lorlatinib
------------------	--------------------------------

Arm description:

Subjects with locally advanced or metastatic ALK-positive NSCLC received avelumab 10 mg/kg as a 1-hour IV infusion once every 2 weeks (Day 1 of each cycle) and lorlatinib 100 mg orally once a day (QD) on a continuous daily dosing schedule.

Arm type	Experimental
Investigational medicinal product name	PF-06463922
Investigational medicinal product code	
Other name	Lorlatinib
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

The subjects received PF-06463922 100 mg (starting dose) orally once a day (QD).

Investigational medicinal product name	Avelumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

The subjects received avelumab 10 mg/kg as a 1-hour intravenous (IV) infusion once every 2 weeks (Day 1 of each cycle)

Number of subjects in period 1	Group A: Avelumab + Crizotinib	Group B: Avelumab + Lorlatinib
Started	12	31
Completed	0	0
Not completed	12	31
Adverse event, not serious	1	4
Adverse event, serious fatal	-	1
Physician decision	1	2
Consent withdrawn by subject	1	1
Death	-	1
Adverse event, serious non-fatal	2	-
Unspecified	-	6
Progressive disease	7	15
Lost to follow-up	-	1

Primary: Percentage of Subjects With CR for Group B: Phase 2

End point title	Percentage of Subjects With CR for Group B: Phase 2 ^{[1][2]}
End point description: Per RECIST v1.1: CR was defined as the disappearance of all target or non-target lesions; any pathological lymph nodes (whether target or non-target) had reduction in short axis to <10 mm and all lymph nodes were non-pathological in size (<10 mm short axis). The analysis population included all subjects who received at least one dose of study drug in Group B. Subjects were classified according to the study treatment actually received. If a subject received more than one treatment the subject was classified according to the first treatment received. Results for Group A are not reported for this end point according to the protocol.	
End point type	Primary
End point timeframe: Baseline up to 60 months	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this endpoint

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Statistics were reported for the arms specified

End point values	Group B: Avelumab + Lorlatinib			
Subject group type	Reporting group			
Number of subjects analysed	31			
Units: Percentage of subjects				
number (not applicable)	3.2			

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of Subjects With Objective Response (OR): Phase 2

End point title	Percentage of Subjects With Objective Response (OR): Phase
-----------------	--

End point description:

OR is defined as complete response (CR) or partial response (PR) according to Response Evaluation Criteria in Solid Tumors (RECIST) v1.1 from the start date until disease progression or death. Both CR and PR were confirmed by repeat assessments performed ≥ 4 weeks after the criteria for response are first met. Per RECIST v1.1: CR was defined as the disappearance of all target or non-target lesions; any pathological lymph nodes (whether target or non-target) had reduction in short axis to < 10 mm and all lymph nodes were non-pathological in size (< 10 mm short axis). PR was defined as a $\geq 30\%$ decrease in the sum of the longest dimensions of the target lesions taking as a reference the baseline sum longest dimensions. The analysis population included all subjects who received at least 1 dose of study drug. Subjects were classified according to the study treatment received. If a subject received more than 1 treatment, the subject was classified according to the first treatment received.

End point type	Primary
----------------	---------

End point timeframe:

Screening, Day 1 of each cycle starting Cycle 3, up to end of treatment/withdrawal (maximum of 5 years)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this endpoint

Secondary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs)
-----------------	---

End point description:

TEAEs are those adverse events (AEs) with onset dates during the on-treatment period for the first time or if the worsening of an AE is during the on-treatment period. Treatment-related (TR) AEs was any untoward medical occurrence attributed to study drug in a subject who received study drug. Per NCI CTCAE v4.03: Grade 3 (G3) events=severe AEs; G4 events=life-threatening consequences, urgent intervention indicated; G5 events=death related to an AE. A serious AE (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged in subject hospitalization; life-threatening experience; persistent or significant disability/incapacity; congenital anomaly. The analysis population included all subjects who received at least 1 dose of study drug. Subjects were classified according to the study drug received. If a subject received more than 1 study treatment, the subject was classified according to the first treatment received.

Secondary: Apparent Plasma Clearance (CL/F) of Crizotinib in The Presence of Avelumab

End point title	Apparent Plasma Clearance (CL/F) of Crizotinib in The Presence
-----------------	--

End point description:

Clearance of a drug is a measure of the rate at which a drug is metabolized or eliminated by normal biological processes. Clearance obtained after oral dose (apparent oral clearance) is influenced by the fraction of the dose absorbed. Clearance was estimated from population pharmacokinetic (PK) modeling. Drug clearance is a quantitative measure of the rate at which a drug substance is removed from the blood. The analysis population included subjects who received at least one dose of study drug and who had at least one of the PK parameters of interest for crizotinib in Group A. Group B was not evaluable for this end point.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose, 1, 2, 4, 6 and 8 hours post dose on Day 1 of Cycle 2

Notes:

[8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Statistics were reported for the arms specified

End point values	Group A: Avelumab + Crizotinib

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 30 days post lost dose of study treatment with a maximum of 5 years.

Adverse event reporting additional description:

The same event may appear as both an AE and an SAE. An event may be categorized as serious in 1 subject and as non-serious in another subject, or 1 subject may have experienced both a serious and non-serious event during the study. Total number at risk below refers to the number of subjects evaluable for SAEs or AEs.

Assessment type	Non-systematic

Upper respiratory tract infection subjects affected / exposed occurrences (all)	5 / 31 (16.13%) 9	1 / 12 (8.33%) 1	
Metabolism and nutrition disorders			
Acidosis subjects affected / exposed occurrences (all)	0 / 31 (0.00%) 0	1 / 12 (8.33%) 1	
Decreased appetite subjects affected / exposed occurrences (all)	2 / 31 (6.45%) 2	5 / 12 (41.67%) 6	
Hypokalaemia subjects affected / exposed occurrences (all)	2 / 31 (6.45%) 2	0 / 12 (0.00%) 0	
Hypoglycaemia subjects affected / exposed occurrences (all)	1 / 31 (3.23%) 1	1 / 12 (8.33%) 1	
Hypocalcaemia subjects affected / exposed occurrences (all)	1 / 31 (3.23%) 1	1 / 12 (8.33%) 1	
Hypoalbuminaemia subjects affected / exposed occurrences (all)	2 / 31 (6.45%) 3	1 / 12 (8.33%) 5	
Hypertriglyceridaemia subjects affected / exposed occurrences (all)	18 / 31 (58.06%) 86	0 / 12 (0.00%) 0	
Hyperglycaemia subjects affected / exposed occurrences (all)	2 / 31 (6.45%) 4	0 / 12 (0.00%) 0	
Hypercholesterolaemia subjects affected / exposed occurrences (all)	6 / 31 (19.35%) 27	0 / 12 (0.00%) 0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 August 2015	<p>Per request from the United States Food and Drug Administration (US FDA), add statement that patients should have their tumors evaluated for epidermal growth factor receptor (EGFR) mutations and have exhausted appropriate therapy, if positive.</p> <p>Corrected typographical errors within the protocol.</p> <p>Corrected an error on the SOA referring to PF 06463922 PK analysis that was added in error.</p> <p>Corrected an error for hematology and blood chemistry collection in the SOA (Both should occur on Cycles 1 and 2 on Days 1 and 8).</p> <p>Clarified efficiency of decision rules based on mTPI design over traditional 3+3 design.</p> <p>Removed non applicable text related to medical device safety reporting from the Serious Adverse Event section.</p>
24 March 2016	<p>Revised Background, PF-06463922 Dose Modification and Electrocardiograms sections, Exclusion Criteria, and added a new Appendix to address any potential cardiac issues related to PF-06463922. Revised exclusion criteria. Clarified in the inclusion criteria and indication section that Group A patients should be previously treated. Modified inclusion criterion #9 to only include patients with estimated creatinine clearance >30 mL/min. Clarified modified Toxicity Probability Interval dose finding rules including Table 3 and removed previous Appendix 2. Removed Exploratory Objective "To explore changes to the tumor tissue and biomarkers". Revised procedure information, visit time window, and timepoints in the Schedule of Activities and Pharmacokinetic Sample Collection Table. Clarified that baseline signs and symptoms should be collected on the Medical History Case Report Form. Clarified requirements for eye exams, urinalysis, Banked Blood Biospecimen for Exploratory Biomarker Assessments, and Pharmacokinetic sampling. Changed teratogenic risk of PF-06463922 from unknown to known in Section 4.3. Consolidated information for required Banked Biospecimens in Schedule of Assessment and Sections 7.4, 7.5, and 7.5.1. Removed requirement for antineutrophil cytoplasmic antibody, antinuclear antibody and rheumatoid factor testing. Added screening HBV and HCV tests to the Schedule of Activities table. Revised frequency of adrenocorticotrophic hormone, Free thyroxine, and thyroid stimulating hormone assessments. Removed requirement for 2 blood pressure readings to be taken 1 hour apart. Updated the Recommended Dose Modifications section. Updated the Management of Avelumab + PF-06463922 Treatment-Related Toxicity guidelines. Combined Sections "Other Prohibited Concomitant Medications and Treatments" and "Other Prohibited Concomitant Medications and Therapies". Additional guidance for use of inhibitors, inducers, and substrates of CYP3A enzymes for Group A was provided.</p>

30 June 2017	Schedule of Assessments and Pharmacokinetic Sample Collection Table: Revised to include tumor sample and blood biospecimens for Group B Phase 2 including new footnote; removed Follow-up Day 30 avelumab PK sample; other clarifications included. Objectives, Endpoints, Study Overview, Study Schema, Sample size calculation, and Efficacy Analyses revised for Group B Phase 2. Inclusion Criterion 2 revised to include requirement of no prior treatment for Group B Phase 2. Inclusion Criterion 6 corrected to state "0 to 2" vs "0 or 2". Exclusion Criterion 3 revised to not apply for Group B Phase 2. Exclusion Criterion 16 revised to update restrictions on cardiovascular disease. Exclusion Criterion 19 updated to restrict listed conditions to within the past 1 year. Exclusion Criterion 22 clarified and Exclusion criteria 24 and 25 added due to emerging data on potential drug interactions with PF-06463922. Administration section for PF-06463922 revised due to emerging food effect data on PF-06463922. Updated Tables 6 and 7 for the management of treatment-related toxicities. Added that PF-06463922 treatment should be interrupted during palliative radiotherapy, stopping 1 day before and resuming treatment after recovery from acute radiation toxicities to baseline. Revised Section 5.7.1.2 and Table 8 to remove maximum infusion time of 120 minutes. Updated guidance for Inhibitors and Inducers of CYP Enzymes for Group B. Clarification added re: steroid use to specify the guidelines only apply if patient is still receiving avelumab. Table 12: Required Laboratory Tests revised to include corrections and remove redundant language. Clarification of ECG assessment and eliminated redundant language. Collection of Avelumab Pharmacokinetic Samples (Both Groups A and B) and Immunogenicity Assessment sections revised to provide better guidance on collection of avelumab PK and ADA samples, as well as proper sample management.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Enrollment in the study was terminated early based on the changing landscape in treatment options. All subjects on active treatment at the time of the termination could continue treatment and follow up per the protocol.

Notes:
