

Clinical trial results:

A randomised, double-blind, placebo-controlled, single-centre phase IIb trial as part of the EU-funded UNISEC project to assess the immunogenicity and safety of different formulations and dosing regimens of FLU-v vaccine administered subcutaneously in healthy adults aged 18-60 years.

Summary

EudraCT number	2015-001932-38
Trial protocol	NL
Global end of trial date	18 July 2017

Results information

Result version number	v1 (current)
This version publication date	12 April 2019
First version publication date	12 April 2019

Trial information

Trial identification

Sponsor protocol code	FLU-v-003

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 April 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 July 2017
Global end of trial reached?	Yes
Global end of trial date	18 July 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

(1) Cellular Immunogenicity

- To evaluate the cellular immune responses based on multi-parametric FACS analysis in all subjects at 0 and 42 and 180 days following FLU-v vaccination.
- To evaluate the cellular immune responses based on IFN- γ ELISA assays in all subjects at 0 and 42 and 180 days following FLU-v vaccination.

(2) Safety

- To evaluate the solicited AEs in all subjects until 21 days after the last dosing of the study vaccine (FLU-v).
- To evaluate the unsolicited AEs and SAEs in all subjects during the whole study period.

Protection of trial subjects:

Subjects were submitted to two subcutaneous injections and three blood samplings. If subjects showed influenza symptoms a nasopharyngeal swab was taken.

There were minimal risks to these procedures who were performed by trained personnel. Doctors and nurses were always available if subjects had any concerns or suffered any discomfort. Subjects were allowed to take over the counter anti-inflammatories to alleviate any adverse events post-vaccination. Subjects remained under observation for 30min post-vaccination.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 August 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 175
Worldwide total number of subjects	175
EEA total number of subjects	175

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	175
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Healthy volunteers 18-60 years old were recruited from the Zwolle city of the Netherlands during the summer of 2016. Interested subjects were screened over the phone before being invited for the screening visit on Site.

Pre-assignment

Screening details:

195 subjects were screened, 3 were lost to follow up, 9 withdrew consent and 8 failed inclusion/exclusion criteria. 175 subjects were randomised. 1 subject in 1x adjuvanted FLU-v arm received the wrong treatment and could not be included in any arm for analysis leaving the total number as 174 subjects.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

The only personnel unblinded were those formulating the vaccine ready for administration and there were not involved in other trial-related activities. The appearance of the placebo and active treatments were the same and therefore no masking of the syringes was required. The randomisation codes remained in the pharmacy under locked key only accessible to unblinded personnel.

Arms

Are arms mutually exclusive?	Yes
Arm title	2x Non-adjuvanted FLU-v

Arm description:

FLU-v on Day 0 and Day 21

FLU-v: Subcutaneous injection in the upper arm with 500 ug of FLU-v as 0.5ml suspension in 0.01M HCl and 0.01M NaOH

Arm type	Experimental
Investigational medicinal product name	FLU-v
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

500micrograms in 0.5ml

Arm title	1x Adjuvanted FLU-v
------------------	---------------------

Arm description:

adjuvanted FLU-v on Day 0, saline (0.5mL) on Day 21

adjuvanted FLU-v: Subcutaneous injection in the upper arm with 500ug of FLU-v emulsified in 0.25ml of Montanide ISA-51 adjuvant (Seppic, France) and 0.25ml of water for injection

Saline: Subcutaneous injection in the upper arm with 0.5ml of saline

Arm type	Experimental
----------	--------------

Analysis type	other
P-value	= 0.662
Method	Fisher exact

Statistical analysis title	subjects who tested positive for influenza
Statistical analysis description: Differences in the infection rates against any of the strains tested between treatment group and corresponding placebo.	
Comparison groups	1x Adjuvanted FLU-v v Adjuvanted Placebo
Number of subjects included in analysis	77
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.168
Method	Fisher exact

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From vaccination to the end of the study

Adverse event reporting additional description:

Solicited Adverse Events were collected for 21 days after each vaccination. Subjects had to fill in the AEs diary card daily and return to the clinic on the next scheduled visit.

Unsolicited Adverse Events and Severe Adverse Events were collected at any time during the study directly to the PI or study doctor.

Assessment type	Systematic

Reporting groups

Reporting group title	2x Non-adjuvanted FLU-v
-----------------------	-------------------------

Reporting group description:

FLU-v on Day 0 and Day 21

FLU-v: Subcutaneous injection in the upper arm with 500 ug of FLU-v as 0.5ml suspension in 0.01M HCl and 0.01M NaOH

Reporting group title	1x Adjuvanted FLU-v
-----------------------	---------------------

Reporting group description:

adjuvanted FLU-v on Day 0, saline (0.5mL) on Day 21

adjuvanted FLU-v: Subcutaneous injection in the upper arm with 500ug of FLU-v emulsified in 0.25ml of Montanide ISA-51 adjuvant (Seppic, France) and 0.25ml of water for injection

Saline: Subcutaneous injection in the upper arm with 0.5ml of saline

Reporting group title	Non-adjuvanted Placebo
-----------------------	------------------------

Reporting group description:

saline solution (0.5ml) on Day 0 and Day 21

Saline: Subcutaneous injection in the upper arm with 0.5ml of saline

Reporting group title	Adjuvanted Placebo
-----------------------	--------------------

Reporting group description:

Adjuvanted placebo on Day 0, saline (0.5mL) on Day 21

Saline: Subcutaneous injection in the upper arm with 0.5ml of saline

Adjuvanted placebo: Subcutaneous injection in the upper arm with an emulsion made with 0.25ml of Montanide

ISA-51 adjuvant (Seppic, France) and 0.25ml of water for injection

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Recruitment stopped early at 175 subjects instead of 222. Dropout rate was lower than anticipated (4% vs 20%). The number of participants recruited was considered to be sufficient to provide statistically significant data in the primary endpoints.
