

Clinical trial results:

A Phase 3, long-term active treatment extension study of mongersen (GED-0301) in subjects with Crohn's disease

Summary

EudraCT number	2015-001963-37
Trial protocol	LV EE SK SE HU AT CZ GB DE ES PT BE DK BG GR HR FI IT
Global end of trial date	04 January 2018

Results information

Result version number	v1 (current)
This version publication date	24 January 2019
First version publication date	24 January 2019

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 May 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	04 January 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to evaluate the long-term safety of oral GED-0301 in subjects with Crohn's disease (CD).

Protection of trial subjects:

Patient Confidentiality, Informed Consent, Archiving of Essential Documents

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 July 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Austria: 13
Country: Number of subjects enrolled	Belgium: 12

Country: Number of subjects enrolled	Ukraine: 11
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	United States: 29
Country: Number of subjects enrolled	Slovakia: 7
Country: Number of subjects enrolled	Spain: 7
Worldwide total number of subjects	310
EEA total number of subjects	186

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	4
From 65 to 84 years	299
85 years and over	7

Subject disposition

Recruitment

Recruitment details:

310 adult participants who had previously participated in the main study GED-0301-CD-002 were enrolled at 167 study sites in 29 countries.

Pre-assignment

Screening details:

Includes participants with Crohn's disease who had previously participated in the main study GED-0301-CD-002 through Week 12 at minimum and completed participation through the last treatment visit at Week 52, or met the "early escape criteria" and were discontinued beginning at Week 12 through Week 52.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	GED-0301 40 mg 4 Weeks Alt

Arm description:

Participants received alternating placebo daily for 4 weeks and GED-0301 40 mg daily for 4 weeks, up to week 208.

Arm type	Experimental
Investigational medicinal product name	GED-0301
Investigational medicinal product code	
Other name	Mongersen
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received alternating placebo daily for 4 weeks and GED-0301 40 mg daily for 4 weeks, up to week 208

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received alternating placebo daily for 4 weeks and GED-0301 40 mg daily for 4 weeks, up to week 208

Arm title	GED-0301 40 mg
------------------	----------------

Arm description:

Participants received continuous GED-0301 40 mg daily up to week 208.

Arm type	Experimental
Investigational medicinal product name	GED-0301
Investigational medicinal product code	
Other name	Mongersen
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received continuous GED-0301 40 mg daily, up to week 208.

Arm title	GED-0301 160 mg 4 Weeks Alt
------------------	-----------------------------

Arm description:

Participants received one of three dose regimens up to week 208:

- (1) alternating placebo daily for 4 weeks and GED-0301 160 mg daily for 4 weeks or
- (2) alternating GED-0301 160 mg daily for 4 weeks and placebo daily for 4 weeks or
- (3) GED-0301 160 mg daily for 12 weeks, followed by alternating placebo daily for 4 weeks and GED-0301 160 mg daily for 4 weeks.

Arm type	Experimental
Investigational medicinal product name	GED-0301
Investigational medicinal product code	
Other name	Mongersen
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received one of three dose regimens up to week 208:

- (1) alternating placebo daily for 4 weeks and GED-0301 160 mg daily for 4 weeks or
- (2) alternating GED-0301 160 mg daily for 4 weeks and placebo daily for 4 weeks or
- (3) GED-0301 160 mg daily for 12 weeks, followed by alternating placebo daily for 4 weeks and GED-0301 160 mg daily for 4 weeks.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received one of three dose regimens up to week 208:

- (1) alternating placebo daily for 4 weeks and GED-0301 160 mg daily for 4 weeks or
- (2) alternating GED-0301 160 mg daily for 4 weeks and placebo daily for 4 weeks or
- (3) GED-0301 160 mg daily for 12 weeks, followed by alternating placebo daily for 4 weeks and GED-0301 160 mg daily for 4 weeks

Number of subjects in period 1	GED-0301 40 mg 4 Weeks Alt	GED-0301 40 mg	GED-0301 160 mg 4 Weeks Alt
Started	4	13	293

Baseline Crohn's Disease Activity (CDAI) Score			
The Crohn's Disease Activity Index (CDAI) is used to quantify the signs and symptoms of Crohn's disease and the effect on patient's quality of life. It consists of 8 variables which include patient reported outcomes over a 7 day period and physician assessments which are scored numerically and weighted. Scores range from 0 to 600, with the most severe disease defined >450			
Units: Units on a Scale arithmetic mean standard deviation	316.9 ± 96.90	309.2 ± 43.10	307.5 ± 62.74

(3) GED-0301 160 mg daily for 12 weeks, followed by alternating placebo daily for 4 weeks and GED-0301 160 mg daily for 4 weeks.	

Primary: Number of Participants with Treatment Emergent Adverse Events

End point title	Number of Participants with Treatment Emergent Adverse Events ^[1]
End point description:	
A TEAE was defined as any adverse event (AE) occurring or worsening on or after the first treatment of GED-0301 and up to 28 days after the last GED- 0301 dose or the last follow-up date, whichever occurred earlier. A serious AE = any AE which results in death; is life-threatening; requires inpatient hospitalization or prolongation of existing hospitalization; results in persistent or significant disability/incapacity; is a congenital anomaly/birth defect; constitutes an important medical event. The severity of AEs was assessed by the investigator and based on the following scale; Mild = asymptomatic or mild symptoms; clinical or diagnostic observations only; Moderate = Symptoms cause moderate discomfort; Severe (could be non- serious or serious) = symptoms causing severe discomfort/pain.	
End point type	Primary
End point timeframe:	
From the first day of GED-0301 until 28 days after the last dose of IP; maximum treatment duration was 16.1 weeks in the GED-0301 40 mg Alt dose; 16.3 weeks in the GED 40 mg continuous dose and 56.1 weeks in the GED-0301 160 mg Alt dose	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.	
Justification: No statistical analysis were performed as the study was terminated.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 January 2017	<ol style="list-style-type: none">1. The addition of adolescent subjects into this long-term active treatment extension study who previously participated in the Phase 3 Study GED-0301-CD-003.2. New sections were added to the protocol that applied specifically to adolescent subjects.3. The objectives, endpoints, inclusion/exclusion criteria, table of events, procedures, and assessments sections were separated for the adult and adolescent subjects throughout the protocol, where appropriate, to clearly indicate protocol information which applied specifically to adult versus adolescent subjects.4. Previous GED-0301-CD-003 subjects were to have an ileocolonoscopy with intestinal mucosal biopsies during the screening period and at Week 12 in the core GED-0301-CD-003 study. A Week 40 ileocolonoscopy with intestinal mucosal biopsies was to be included in this study for these adult subjects, as well as the adolescent subjects, to determine if mucosal healing and/or endoscopic remission was achieved after 52 weeks of GED-0301 therapy from the combined studies (12 weeks from GED-0301-CD-003 and 40 weeks from GED-0301-CD-004) in the adult (and adolescent) populations.5. The Week 12 clinical criteria were added for discontinuing subjects who did not achieve a minimum level of improvement by Week 12.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Following a recommendation by the Data Monitoring Committee (DMC), the study was terminated early by Celgene on 19 Oct 2017 due to a lack of emerging benefit; no emergent safety findings were noted.
