

## Clinical trial results:

### A Phase Ib/II Study Evaluating the Safety and Efficacy of Obinutuzumab in Combination with Polatuzumab Vedotin and Venetoclax in Patients With Relapsed or Refractory Follicular Lymphoma and Rituximab in Combination with Polatuzumab Vedotin and Venetoclax in Patients with Relapsed or Refractory Diffuse Large B-Cell Lymphoma

#### Summary

EudraCT number	2015-001998-40
Trial protocol	IT
Global end of trial date	04 August 2022

#### Results information

Result version number	v2 (current)
This version publication date	07 April 2024
First version publication date	16 August 2023
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set To align with updates made to the CT.gov record post NIH QA comments.</li></ul>

#### Trial information

##### Trial identification

Sponsor protocol code	GO29833
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02611323
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 August 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 August 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of the trial was to evaluate the safety, efficacy, and pharmacokinetics of induction treatment with obinutuzumab, polatuzumab vedotin, and venetoclax in participants with relapsed or refractory FL, and with rituximab, polatuzumab vedotin, and venetoclax in participants with DLBCL.

Protection of trial subjects:

All participants were required to sign the informed consent form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 March 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 53
Country: Number of subjects enrolled	Italy: 29
Country: Number of subjects enrolled	United States: 49
Worldwide total number of subjects	131
EEA total number of subjects	29

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	68
From 65 to 84 years	60
85 years and over	3

## Subject disposition

### Recruitment

#### Recruitment details:

Participants took part in this study at 23 investigative centers in Australia, Italy, & the United States from 09 March 2016 to 04 August 2022. Study consisted of two phases: dose-escalation phase & dose-expansion phase. All eligible participants in both the phases received induction treatment, & post-induction treatment as indicated.

### Pre-assignment

#### Screening details:

Participants were enrolled in the study to receive polatuzumab vedotin + venetoclax & fixed doses of rituximab/obinutuzumab. Of the 133 enrolled participants, 131 participants received at least one dose of the study drug & their intended treatment. 2 participants did not receive any study treatment.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	FL Dose Escalation: 1.4P+400V+1000G

#### Arm description:

Participants received venetoclax, 400 milligrams (mg), orally, once daily (QD) on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, intravenous (IV) infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.4 milligrams per kilograms (mg/kg), IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved complete response (CR), partial response (PR), or stable disease (SD) at end of induction (EOI) received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 400 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.

Arm type	Experimental
Investigational medicinal product name	Venetoclax
Investigational medicinal product code	GDC-0199
Other name	ABT-199; RO5537382
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

#### Dosage and administration details:

Participants received venetoclax, 400 mg, orally, QD on Days 1-21 of Cycles 1-6 followed by maintenance treatment (for participants with CR, PR or SD) at a dose of 400 mg, orally, QD until disease progression or unacceptable toxicity for up to 8 months.

Investigational medicinal product name	Obinutuzumab
Investigational medicinal product code	
Other name	RO5072759
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

#### Dosage and administration details:

Participants received obinutuzumab, 1000 mg, IV infusion on Days 1, 8 and 15 of Cycle 1 and on Day 1 of Cycles 2 to 6 followed by maintenance treatment (only for participants with CR, PR or SD) at a dose of 1000 mg via IV infusion on Day 1 of every other month until disease progression or unacceptable toxicity for up to 24 months.

Investigational medicinal product name	Polatuzumab vedotin
Investigational medicinal product code	DCDS4501A
Other name	RO5541077

Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Participants received polatuzumab vedotin, 1.4 mg/kg, IV infusion on Day 1 of each 28-day cycle for up to 6 cycles during induction treatment.

<b>Arm title</b>	FL Dose Escalation: 1.4P+200V+1000G
------------------	-------------------------------------

**Arm description:**

Participants received venetoclax, 200 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, IV infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.4 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR, PR, or SD at EOI received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 200 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.

Arm type	Experimental
Investigational medicinal product name	Polatuzumab vedotin
Investigational medicinal product code	DCDS4501A
Other name	RO5541077
Pharmaceutical forms	Infusion, Infusion
Routes of administration	Intravenous use, Intravenous use

**Dosage and administration details:**

Participants received polatuzumab vedotin, 1.4 mg/kg, IV infusion on Day 1 of each 28-day cycle for up to 6 cycles during induction treatment.

Investigational medicinal product name	Obinutuzumab
Investigational medicinal product code	
Other name	RO5072759
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Participants received obinutuzumab, 1000 mg, IV infusion on Days 1, 8 and 15 of Cycle 1 and on Day 1 of Cycles 2 to 6 followed by maintenance treatment (only for participants with CR, PR or SD) at a dose of 1000 mg via IV infusion on Day 1 of every other month until disease progression or unacceptable toxicity for up to 24 months.

Investigational medicinal product name	Venetoclax
Investigational medicinal product code	GDC-0199
Other name	ABT-199; RO5537382
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

**Dosage and administration details:**

Participants received venetoclax, 400 mg, orally, QD on Days 1-21 of Cycles 1-6 followed by maintenance treatment (for participants with CR, PR or SD) at a dose of 400 mg, orally, QD until disease progression or unacceptable toxicity for up to 8 months.

<b>Arm title</b>	FL Dose Escalation: 1.8P+400V+1000G
------------------	-------------------------------------

**Arm description:**

Participants received venetoclax, 400 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, IV infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.8 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR, PR, or SD at EOI received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 400 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Polatuzumab vedotin
Investigational medicinal product code	DCDS4501A
Other name	RO5541077

During consolidation treatment participants received venetoclax, 800 mg, QD, for up to 8 months and rituximab, 375 mg/m<sup>2</sup> on Day 1 of every other month (1 month=28 days) starting from Month 2 up to 8 months.

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	RO0452294
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Participants received rituximab, 375 mg/m<sup>2</sup>, IV, infusion on Day 1 of Cycle 1 to 6 followed by consolidation treatment (for participants with CR or PR) at a dose of 375 mg/m<sup>2</sup> via IV infusion on Day 1 of every other month until disease progression or unacceptable toxicity for up to 8 months.

Investigational medicinal product name	Venetoclax
Investigational medicinal product code	GDC-0199
Other name	ABT-199; RO5537382
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

**Dosage and administration details:**

Participants received venetoclax, 800 mg, orally, QD on Days 1-21 of Cycles 1-6 followed by consolidation treatment (for participants with CR or PR) at a dose of 400 mg, orally, QD until disease progression or unacceptable toxicity for up to 8 months.

Investigational medicinal product name	Polatuzumab vedotin
Investigational medicinal product code	DCDS4501A
Other name	RO5541077
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Participants received polatuzumab vedotin, 1.8 mg/kg, IV infusion on Day 1 of each 28-day cycle for up to 6 cycles during induction treatment.

## Baseline characteristics

### Reporting groups

Reporting group title	FL Dose Escalation: 1.4P+400V+1000G
Reporting group description: Participants received venetoclax, 400 milligrams (mg), orally, once daily (QD) on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, intravenous (IV) infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.4 milligrams per kilograms (mg/kg), IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved complete response (CR), partial response (PR), or stable disease (SD) at end of induction (EOI) received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 400 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.	
Reporting group title	FL Dose Escalation: 1.4P+200V+1000G
Reporting group description: Participants received venetoclax, 200 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, IV infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.4 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR, PR, or SD at EOI received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 200 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.	
Reporting group title	FL Dose Escalation: 1.8P+400V+1000G
Reporting group description: Participants received venetoclax, 400 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, IV infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.8 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR, PR, or SD at EOI received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 400 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.	
Reporting group title	FL Dose Escalation: 1.4P+600V+1000G
Reporting group description: Participants received venetoclax, 600 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, IV infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.4 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR, PR, or SD at EOI received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 600 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.	
Reporting group title	FL Dose Escalation: 1.8P+600V+1000G
Reporting group description: Participants received venetoclax, 600 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with obinutuzumab, 1000 mg, IV infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, 1.8 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR, PR, or SD at EOI received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, 600 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.

Subject analysis set title	All FL Participants: Dose Escalation
----------------------------	--------------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

All participants with FL received venetoclax, at a dose of 200 mg, 400 mg, 600 mg or 800 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) in combination with obinutuzumab, 1000 mg, IV infusion, on Days 1, 8 and 15 of Cycle 1 and thereafter on Day 1 of Cycles 2-6 and polatuzumab vedotin, at a dose of 1.4 mg/kg or 1.8 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR, PR, or SD at EOI received maintenance treatment until disease progression or unacceptable toxicity for up to 24 months. During maintenance treatment participants received venetoclax, at a dose of 200 mg, 400 mg, 600 mg or 800 mg, QD, for up to 8 months and obinutuzumab, 1000 mg on Day 1 of every other month (1 month=28 days) starting from Month 2 for up to 24 months.

Subject analysis set title	All DLBCL Participants: Dose Escalation
----------------------------	-----------------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

All participants with DLBCL received venetoclax, at a dose of 400 mg, 600 mg or 800 mg, orally, QD on Days 1-21 of Cycles 1-6 (1 cycle=21 days) along with rituximab, 375 mg/m<sup>2</sup>, IV infusion, on Day 1 of Cycles 1-6 and polatuzumab vedotin, 1.8 mg/kg, IV infusion, on Day 1 of Cycles 1-6 as induction treatment. Thereafter participants who achieved CR or PR at EOI received consolidation treatment until

disease progression or unacceptable toxicity for up to 8 months. During consolidation treatment participants received venetoclax, at a dose of 400 mg, 600 mg or 800 mg, QD, for up to 8 months and rituximab, 375 mg/m<sup>2</sup> on Day 1 of every other month (1 month=28 days) starting from Month 2 up to 8 months.

### **Primary: Percentage of Participants with CR at EOI Determined by an Independent Review Committee (IRC) on the Basis of Positron Emission Tomography (PET) and Computed Tomography (CT) Scans**

End point title	Percentage of Participants with CR at EOI Determined by an Independent Review Committee (IRC) on the Basis of Positron Emission Tomography (PET) and Computed Tomography (CT) Scans <sup>[1][2]</sup>
-----------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### End point description:

CR at EOI was assessed by IRC according to modified Lugano Response Criteria (MLRC) for Malignant Lymphoma 2014 using PET-CT scan. CR =complete metabolic response (MR) in lymph nodes & extra lymphatic sites (ELS) with a score of 1, 2, or 3, with/without a residual mass on PET 5-point scale (5-PS), where 1=no uptake above background; 2= uptake ≤mediastinum; 3= uptake >mediastinum but ≤liver; 4=uptake moderately > liver; 5=uptake markedly higher than liver &/or new lesions. No new lesions; no evidence of fluorodeoxyglucose (FDG)-avid disease in bone marrow. Efficacy evaluable population=participants in the dose expansion arms who received at least one dose of any component of the combination. As pre-specified in the protocol, participants who received polatuzumab vedotin & venetoclax at recommended phase 2 dose (RP2D) in dose-escalation phase were also analysed in addition to expansion phase participants for efficacy analysis. Percentages have been rounded off to first decimal point.

End point type	Primary
----------------	---------

#### End point timeframe:

6 to 8 weeks after Day 1 of Cycle 6 (up to approximately 23 weeks) (1 cycle=21 days)

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: It included participants in the dose expansion arms who received at least one dose of any component of the combination. As pre-specified in the protocol, participants who received polatuzumab vedotin and venetoclax at RP2D in dose-escalation phase were also analyzed in addition to expansion phase participants for efficacy analysis.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: It included participants in the dose expansion arms who received at least one dose of any component of the combination. As pre-specified in the protocol, participants who received polatuzumab vedotin and venetoclax at RP2D in dose-escalation phase were also analyzed in addition to expansion phase participants for efficacy analysis.

### **Primary: FL Cohorts: Percentage of Participants with Adverse Events (AEs) and Serious Adverse Events (SAEs)**

End point title	FL Cohorts: Percentage of Participants with Adverse Events
-----------------	------------------------------------------------------------

## End point description:

An AE = as any untoward medical occurrence in a participant administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An AE could therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. Any new disease or worsening of an existing disease were also considered as AEs. An SAE = any AE that was fatal, life threatening, required prolonged inpatient hospitalization, resulted in significant disability or resulted in a congenital anomaly to a mother exposed to study treatment. AEs and SAEs were reported based on the National Cancer Institute Common Terminology Criteria for AEs, version 4.0 (NCI-CTCAE, v4.0). Percentages have been rounded off to the first decimal point. Safety-evaluable population included all participants who received at least one dose of any component of the combination.

6 to 8 weeks after Day 1 of Cycle 6 (up to approximately 23 weeks) (1 cycle=21days)

Notes:

[16] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: It included participants in the dose expansion arms who received at least one dose of any component of the combination. As pre-specified in the protocol, participants who received polatuzumab vedotin and venetoclax at RP2D in dose-escalation phase were also analyzed in addition to expansion phase participants for efficacy analysis.

End point values	FL Dose Escalation: 1.8P+800V+1000G	FL: Dose Expansion: 1.8P+800V+1000G	DLBCL Dose Escalation: 1.8P+800V+37	DLBCL Dose Expansion: 1.8P+800V+37

## Secondary: Observed Plasma Concentration of Polatuzumab Vedotin Antibody-Conjugated Mono-Methyl Auristatin E (MMAE) (acMMAE)

End point title	Observed Plasma Concentration of Polatuzumab Vedotin Antibody-Conjugated Mono-Methyl Auristatin E (MMAE) (acMMAE)
-----------------	-------------------------------------------------------------------------------------------------------------------

End point description:

acMMAE is an analyte of polatuzumab vedotin. PK evaluable population included all participants who had at least one evaluable PK sample post dose for at least one analyte. Overall number analysed is the number of participants with data available for analysis. Number analysed is the number of participants with data available for analysis at the specified timepoint. Here, 9999= The data was not evaluable as the samples were below lower limit of quantification (BLLQ); 99999= Geometric coefficient of variation was not evaluable as the samples were BLLQ; 999999= Since only 1 participant was analysed, the geometric coefficient of variation was not evaluable; 9999999= participants were not analysed for this PK endpoint at the given timepoint.

End point type	Secondary

## Secondary: Number of Participants with Human Anti-Human Antibodies (HAHAs) to Obinutuzumab

End point title	Number of Participants with Human Anti-Human Antibodies (HAHAs) to Obinutuzumab <sup>[21]</sup>
-----------------	-------------------------------------------------------------------------------------------------

End point description:

The number of participants with positive results for HAHAs, also called anti-drug antibodies (ADAs) against obinutuzumab at baseline & at any of the post-baseline assessment time-points were reported. Number of participants positive for Treatment Emergent ADA = the number of post-baseline evaluable participants determined to have treatment induced ADA or treatment-enhanced ADA during study period. Treatment-induced ADA = negative or missing baseline ADA result at least one positive post-baseline ADA result. Treatment-enhanced ADA = a participant with positive ADA result at baseline who has one or more post-baseline titer results that are at least 0.60 titer unit (t.u.) greater than baseline. The immunogenicity population included participants with at least one predose and one postdose HAHA or ATA sample. Overall number analysed=number of participants with data available for analysis. Number analysed=number of participants with data available for analysis at a specified timepoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to approximately 2 years after last dose (up to approximately 52 months)

Notes:

[21] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only participants who received obinutuzumab were included

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From study start to 24 months after last dose of study drug (approximately 56 months);

DLBCL cohorts: From study start to 3 months after last dose of study drug (approximately 21 months)

Adverse event reporting additional description:

Safety-evaluable population included all participants who received at least one dose of any component of the combination.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 August 2015	<ol style="list-style-type: none"><li>1. Inadvertent wording corrected regarding drug name: lenalidomide replaced with venetoclax.</li><li>2. Corrected schedule of imaging assessments for both relapsed/refractory FL and DLBCL patients so that the interim imaging scan should occur 7 days prior to C3D1.</li></ol>
01 August 2016	<ol style="list-style-type: none"><li>1. The amendment revised the DLT criteria, to include an additional cohort with a lower starting dose of venetoclax, and restart enrollment based on modified risk categorization for tumor lysis syndrome (TLS).</li><li>2. Added Cohort 1a with starting doses of 200 mg venetoclax and 1.4 mg/kg polatuzumab vedotin to collect safety data for this combination with obinutuzumab in response to observed adverse events. Cohort 1 will be repeated with the dose levels of 400 mg venetoclax and 1.4 mg/kg polatuzumab vedotin.</li><li>3. Enrollment rules into the dose escalation phase have been updated for participants' safety considerations. A sequential enrollment instead of a parallel enrolment will be used for each of the two dosing groups.</li><li>4. Added exclusion of participants with Grade 3b FL and a history of transformation of indolent disease to DLBCL in order to focus on a more homogenous patient population.</li><li>5. Clarified that CR at EOI on the basis of CT alone is to be determined by the IRC in addition to the investigator</li><li>6. Clarified the Modified Lugano Criteria for designation of PET-CT on the basis of PR to also include requirement of a CR or PR on CT-based response criteria.</li><li>7. Clarified pharmacokinetic and immunogenicity sampling schedule time windows.</li></ol>
17 January 2017	<ol style="list-style-type: none"><li>1. Protocol was updated to clarify that participants with R/R DLBCL were to receive polatuzumab vedotin and venetoclax in</li><li>2. The study design was updated to include a dose-escalation phase in R/R DLBCL participants to assess the maximum tolerated dose of venetoclax when combined with rituximab and polatuzumab at the 1.8 mg/kg dose level. Only venetoclax dosing will be escalated. combination with rituximab instead of obinutuzumab.</li><li>3. The defined primary populations to be analyzed was changed to include participants who received at least one dose of any component of the combination.</li><li>4. The immunogenicity analysis was updated to clarify that human anti-human antibodies will be collected for patients receiving obinutuzumab.</li><li>5. The interim analysis was clarified to state that enrollment would not be stopped in the case of higher than expected efficacy.</li></ol>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
