Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 July 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 November 2018
Global end of trial reached?	Yes
Global end of trial date	01 November 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the long-term safety and tolerability of APD334 (etrasimod) in subjects with UC (ulcerative colitis) who have completed the APD334-003 study.

To evaluate the effect of etrasimod on achieving and maintaining clinical response and/or remission in subjects with UC after 46 weeks of treatment (including 12 weeks in APD334-003).

Protection of trial subjects:

The study was conducted in compliance with the ICH Guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements, the study protocol, and where applicable, Sponsor and/or CRO Standard Operating Procedures.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 14
Country: Number of subjects enrolled	Romania: 1
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Bulgaria: 4
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	Hungary: 8
Country: Number of subjects enrolled	Latvia: 2
Country: Number of subjects enrolled	United States: 20
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Korea, Republic of: 3
Country: Number of subjects enrolled	Russian Federation: 20
Country: Number of subjects enrolled	Ukraine: 23
Worldwide total number of subjects	118
EEA total number of subjects	49

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	112
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

To be eligible, subjects must have completed the APD334-003 study and met the eligibility criteria for APD334-005 at the time of entry.

Pre-assignment

Screening details:

This study was an open-label extension to APD334-003. Eligible subjects from APD334-003 were assigned to receive 2 mg etrasimod QD (once daily) for 34 weeks. Subjects who were enrolled under Protocol Amendment 2 followed a different study design - subjects were randomly assigned to receive placebo or 2 mg QD etrasimod.

Period 1

Period 1 title	Treatment period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

All eligible subjects were given the option to enroll and receive open-label treatment with 2 mg etrasimod once daily (QD).

Arms

Are arms mutually exclusive?	Yes
Arm title	Etrasimod

Arm description:

Subjects received 2 mg etrasimod tablets orally QD for 34 weeks.

Subjects who were enrolled under Protocol Amendment 2 (28 September 2015) received placebo or 2 mg etrasimod tablets QD for 40 weeks.

Arm type	Experimental
Investigational medicinal product name	Etrasimod
Investigational medicinal product code	APD334
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Study treatment was provided in 40cc, induction sealed, high density polyethylene bottles with child resistant screw caps. Subjects were instructed to take their 2 mg etrasimod tablet QD, in the morning, on an empty stomach (after an overnight fast of approximately 8 hours), and to avoid eating for approximately 1 hour after dosing subjects were advised not to crush, break, chew, or dissolve the tablets and to take study medication with an adequate amount of water.

Arm title	Placebo
------------------	---------

Arm description:

Subjects who were enrolled under Protocol Amendment 2 (28 September 2015) received placebo or 2 mg etrasimod tablets QD for 40 weeks.

Arm type	Placebo

End points

End points reporting groups

Reporting group title	Etrasimod
Reporting group description: Subjects received 2 mg etrasimod tablets orally QD for 34 weeks. Subjects who were enrolled under Protocol Amendment 2 (28 September 2015) received placebo or 2 mg etrasimod tablets QD for 40 weeks.	
Reporting group title	Placebo
Reporting group description: Subjects who were enrolled under Protocol Amendment 2 (28 September 2015) received placebo or 2 mg etrasimod tablets QD for 40 weeks.	
Subject analysis set title	Safety
Subject analysis set type	Safety analysis
Subject analysis set description: The Safety population will include all patients who received study medication in the extension study.	
Subject analysis set title	MITT
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: This MITT population consists of all patients, who received at least 1 dose of etrasimod or Placebo, had a baseline measurement, and had a post-enrollment measurement in the extension study for the specific efficacy endpoint being assessed. The MITT evaluable cohort was used for analysis of all proportion-based and all continuous efficacy variables.	

Primary: Number of SAE/AEs

End point title	Number of SAE/AEs
End point description: Treatment-emergent adverse events (AEs) up to 30 days following discontinuation of the study drug. Treatment-emergent serious adverse events (SAEs) up to 30 days following discontinuation of the study drug.	
End point type	Primary
End point timeframe: From first dose in patients participating in APD334-005 study up to 30 days following discontinuation of the study drug - number of serious/treatment-emergent adverse events (AEs).

Statistical analyses

Statistical analysis title	Statistical Analysis Plan, Ver 1.2, dated 27Nov18
Statistical analysis description: Descriptive statistics of 90% confidence interval (CI) for change or percent change from baseline of treatment with etrasimod.	

Comparison groups	Etrasimod v Placebo
Number of subjects included in analysis	118
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0
Method	90% confidence interval

Secondary: Clinical response at week 12 and EOT

End point title	Clinical response at week 12 and EOT
-----------------	--------------------------------------

End point description:

Clinical response achieved at Week 12 and maintained at EOT in APD334-005.

Clinical Response is defined as achievement of clinical remission or satisfaction of the following criteria: decrease in the 3-component Mayo Clinic score (consisting of subscores for stool frequency, rectal bleeding and findings of flexible proctosigmoidoscopy) of ≥ 2 points and a decrease of $\geq 30\%$ with either a decrease of rectal bleeding of ≥ 1 or rectal bleeding score of 0 or 1 compared to APD334-003 baseline.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 12 and EoT.

End point values	Etrasimod	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	94	5		
Units: number of responders				
arithmetic mean (confidence interval 90%)	35.1 (26.9 to 44.0)	40.0 (7.6 to 81.1)		

Statistical analyses

No statistical analyses for this end point

Secondary: Clinical remission at EOT

End point title	Clinical remission at EOT
-----------------	---------------------------

End point description:

To evaluate the effect of etrasimod on achieving and maintaining clinical response and/or remission in subjects with UC after 46 weeks of treatment.

Clinical remission is defined as individual subscores of the 3-component Mayo Clinic score as follows: an endoscopy score (using flexible proctosigmoidoscopy) of 0 or 1 (excluding friability), a rectal bleeding score of 0 or 1, and a stool frequency score of 0 or 1 with a decrease of ≥ 1 point] compared to APD334-003 baseline.

End point type	Secondary
