

Clinical trial results:

Phase 3, Prospective, Multi-center, Open Label Study to Investigate Safety, Immunogenicity, and Hemostatic Efficacy of PEGylated Factor VIII (BAX 855) in Previously Untreated Patients (PUPs) <6 years With Severe Hemophilia A (FVIII <1%)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001296-PIP01-12
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 October 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	29 October 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to determine safety including immunogenicity of BAX 855 based on the incidence of inhibitor development to FVIII (≥ 0.6 Bethesda unit (BU)/mL using the Nijmegen modification of the Bethesda assay).

Protection of trial subjects:

Each participant signed an informed consent form (ICF) before participating in the study.

Background therapy:

NA

Evidence for comparator:

NA

Actual start date of recruitment	12 November 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	109
Children (2-11 years)	11
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at various investigative sites globally from 12 November 2015 to 29 October 2024.

Pre-assignment

Screening details:

Previously untreated patients(PUPs)<6 years with severe hemophilia A(Factor VIII[FVIII]<1%)were treated with BAX 855 in Part A for >=100 exposure days(EDs) or until development of FVIII inhibitor.Then,participants who developed high or low titer FVIII inhibitors entered Part B.In Part B they underwent immune tolerance induction(ITI) with BAX 855.

Period 1

Period 1 title	Part A: Main Study (5 years)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	All Participants
-----------	------------------

Arm description:

PUPs < 6 years of age with severe hemophilia A (FVIII < 1%) and < 3 EDs to ADVATE, BAX 855 or plasma transfusion were enrolled in a single arm group.

Part A (Main Study): Participants age <3 years - who had not experienced two joint bleeds received on-demand treatment of 10-80 international units per kilogram (IU/kg) intravenously (IV) depending on the severity of the bleeding episode; and - who experienced maximum of two joint bleeds received prophylaxis treatment with dose of 25-80 IU/kg of BAX 855 IV (based on investigator discretion) once weekly for up to 100 EDs.

Part B (ITI Portion): Participants who met the pre-defined Part B treatment criteria entered Part B of the study for ITI. Participants either received prophylaxis treatment of BAX 855 low dose 50 IU/kg IV, three times a week (Q3W) or high dose 100-200 IU/kg IV, daily at the discretion of the investigator according to the institution's standard of care.

Arm type	Experimental
Investigational medicinal product name	PEGylated rFVIII
Investigational medicinal product code	BAX855
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

For Part A: 10-50 IU/kg, up to 80 IU/kg, depending on the severity of the bleeding episode and for Part B: 25-50 IU/kg, up to 80 IU/kg at investigator discretion, at least once weekly.

Number of subjects in period 1	All Participants
Started	120
Part A: On-demand Treatment	80
Part A: Prophylaxis Treatment	112
Completed	106
Not completed	14
Physician decision	2

Consent withdrawn by subject	7
Adverse event, non-fatal	3
Reason Not Specified	2

Period 2

Period 2 title	Part B: ITI Portion (3.5 years)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	All Participants
------------------	------------------

Arm description:

PUPs < 6 years of age with severe hemophilia A (FVIII < 1%) and < 3 EDs to ADVATE, BAX 855 or plasma transfusion were enrolled in a single arm group.

Part A (Main Study): Participants age <3 years - who had not experienced two joint bleeds received on-demand treatment of 10-80 international units per kilogram (IU/kg) intravenously (IV) depending on the severity of the bleeding episode; and - who experienced maximum of two joint bleeds received prophylaxis treatment with dose of 25-80 IU/kg of BAX 855 IV (based on investigator discretion) once weekly for up to 100 EDs.

Part B (ITI Portion): Participants who met the pre-defined Part B treatment criteria entered Part B of the study for ITI. Participants either received prophylaxis treatment of BAX 855 low dose 50 IU/kg IV, three times a week (Q3W) or high dose 100-200 IU/kg IV, daily at the discretion of the investigator according to the institution's standard of care.

Arm type	Experimental

Number of subjects in period 2	All Participants
Started	7
Part B:FVII Inhibitor Dose(50 IU/kg Q3W)	4 ^[1]
Part B:FVII Inhibitor100-200IU/kg Daily	3 ^[2]
Completed	7

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: A participant that received on-demand treatment first and then moved to prophylaxis treatment was counted for both on-demand and prophylaxis regimens. A participant that started with prophylaxis treatment was counted only for the prophylaxis regimen even if the participant received on-demand treatment while on the prophylaxis regimen.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: A participant that received on-demand treatment first and then moved to prophylaxis treatment was counted for both on-demand and prophylaxis regimens. A participant that started with prophylaxis treatment was counted only for the prophylaxis regimen even if the participant received on-demand treatment while on the prophylaxis regimen.

Secondary: Bleeding Episodes Categorized by Number of BAX 855 Infusions Required for Treatment

End point title	Bleeding Episodes Categorized by Number of BAX 855 Infusions Required for Treatment
-----------------	---

End point description:

A bleeding episode is defined as subjective (pain consistent with a joint bleed) or objective evidence of bleeding which may or may not require treatment with FVIII. The number of BAX 855 infusions needed for each bleeding episode was determined by the participant, caregiver, clinician treating the participant, and is based upon the participant's response to treatment, using the Efficacy Rating Scale for Treatment of Bleeding Episodes. Number of bleeding episodes are categorized by number of infusions required to treat the bleeding episodes. A participant that received on-demand treatment first and then moved to prophylaxis treatment was counted for both on-demand and prophylaxis regimens. A participant that started with prophylaxis treatment was counted only for the prophylaxis regimen even if the participant received on-demand treatment while on the prophylaxis regimen. The SAS included all participants in the enrolled population with at least one BAX 855 infusion.

Secondary: Blood Loss Per Participant in Case of Surgery

End point title	Blood Loss Per Participant in Case of Surgery
End point description:	
<p>The intraoperative blood loss was measured by determining the volume of blood and fluid removal through suction into the collection container (waste box and/or cell saver) and the estimated blood loss into swabs and towels during the procedure, per the anesthesiologist's record. Post-operatively, blood loss was determined by the drainage volume collected, which mainly consisted of drainage fluid via vacuum or gravity drain, as applicable. The assessment was done for the intra-operative time period (prior to discharge from recovery room) and for the post-operative time period (from completion of the procedure until approximately 24 hours post-surgery). The IPRAS included all participants who were treated with BAX 855 for one or more surgeries or invasive procedures in the context of the study. Number analyzed are the participants who experienced blood loss.</p>

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 9 years

Adverse event reporting additional description:

SAS and IAS is used. Participant that received on-demand treatment 1st and then moved to prophylaxis treatment was counted for both on-demand and prophylaxis regimens. Participant that started with prophylaxis treatment was counted only for the prophylaxis regimen even if participant received on-demand treatment while on the prophylaxis regimen.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	27.0
--------------------	------

Reporting groups

Reporting group title	Part A: Main Study: On-demand
-----------------------	-------------------------------

Reporting group description:

Participants age <3 years and who had not experienced two joint bleeds received on-demand treatment of 10-80IU/kg of BAX 855 IV depending on the severity of the bleeding episode.

Reporting group title	Part B: ITI Portion (100-200 IU/kg Daily Regimen)
-----------------------	---

Reporting group description:

Participants received prophylaxis treatment of 100-200 IU/kg BAX 855 IV daily.

Reporting group title	Part B: ITI Portion (50 IU/kg Three Times Weekly Regimen)
-----------------------	---

Reporting group description:

Participants received prophylaxis treatment of 50 IU/kg BAX 855 IV three times in a week.

Reporting group title	Part A: Main Study: Prophylaxis
-----------------------	---------------------------------

Reporting group description:

Participants age <3 years or after a maximum of two joint bleeds received prophylaxis treatment with dose of 25-80 IU/kg of BAX 855 IV (based on investigator discretion) once weekly for up to 100 EDs.

Serious adverse events	Part A: Main Study: On-demand	Part B: ITI Portion (100-200 IU/kg Daily Regimen)	Part B: ITI Portion (50 IU/kg Three Times Weekly Regimen)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 November 2015	The following changes were made as per Amendment 3: 1. The definition of high-titer inhibitor was changed from ≥ 5 BU to 5 BU, to comply with standard definition of high-titer FVIII inhibitor. 2. The use of anti-cluster of differentiation 20 (CD20) chimeric monoclonal antibody rituximab with BAX 855 during ITI/inhibitor treatment was allowed. 3. The definitions of ITI/inhibitor treatment success, partial success, and failure were revised. 4. The inclusion criteria for Part B (ITI/inhibitor treatment) were revised. 5. The duration of Part B was revised. 6. Section on BAX 855 dosing for PK assessment was newly added to provide guidance on half-life determination in Part A but also Part B as half-life constitutes a criterion for ITI/inhibitor treatment success.
08 February 2018	The following changes were made as per Amendment 4: 1. The total number of Advate exposures was limited to 2 EDs total, including prior to enrollment and during the screening period. 2. The ITI/inhibitor treatment failure definition was updated to be conditional on the absence of an infection that could explain a failure of inhibitory titers to decrease, in the opinion of the investigator. 3. Wording was added that unless consent is withdrawn, participants may be contacted by the investigator after the trial completion visit for up to 3 months for supplemental clinical information related to the trial, if needed. 4. Wording was added that any site changes/corrections to participant diary data need to be supported by source documentation.
21 June 2021	The following changes were made as per Amendment 8: 1. The definition of target joint was amended to be consistent with International Society on Thrombosis and Haemostasis (ISTH) 2014 criteria. 2. A new section was added due to the coronavirus disease 2019 (COVID-19) pandemic that added the provision to include remote source document verification (rSDV), if needed, at sites where it was allowed. 3. Optional extension of access sections was added to describe the terms and conditions under which participants who completed the protocol may have continued access to BAX 855.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
