

Clinical trial results:

A double-blind, randomized, placebo-controlled study to investigate the efficacy and safety of cannabidiol (GWP42003-P, CBD) as add-on therapy in patients with tuberous sclerosis complex who experience inadequately-controlled seizures

Summary

EudraCT number	2015-002154-12
Trial protocol	ES GB PL NL
Global end of trial date	11 June 2021

Results information

Result version number	v1 (current)
This version publication date	26 December 2021
First version publication date	26 December 2021

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001964-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 June 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Double-Blinded Phase (DBP): To evaluate the efficacy of GWP42003-P as add-on therapy in reducing the frequency of seizures when compared with placebo in subjects with Tuberous Sclerosis Complex (TSC).

Open-label Extension (OLE): To evaluate via the adverse events (AE) profile the long term safety and tolerability of GWP42003-P as add-on therapy in children and adults with TSC who experience inadequately-controlled seizures.

Protection of trial subjects:

This study was conducted in accordance with International Council on Harmonisation (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 April 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 9
Country: Number of subjects enrolled	Poland: 61
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	Australia: 24
Country: Number of subjects enrolled	United States: 112
Worldwide total number of subjects	224
EEA total number of subjects	81

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	10
Children (2-11 years)	108
Adolescents (12-17 years)	48
Adults (18-64 years)	58
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 255 subjects were screened; of these 31 were screen failures. A total of 224 subjects were randomized to double-blind treatment. A total of 199 subjects from the DBP were enrolled in the OLE study.

Period 1

Period 1 title	Double Blind Phase (DBP)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	DBP: GWP42003-P 25 mg/kg/Day

Arm description:

Subjects were randomized to receive GWP42003-P 25 milligrams per kilogram per day (mg/kg/day) orally twice daily (morning and evening administration). Subjects completed a 4-week dose-escalation period, titrating up to their assigned dose, before continuing on a stable dose of blinded GWP42003-P for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	Cannabidiol, CBD
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

GWP42003-P was presented as an oral solution containing 100 mg/milliliter (mL) cannabidiol (CBD) dissolved in the excipients sesame oil and anhydrous ethanol with added sweetener and strawberry flavoring.

Arm title	DBP: GWP42003-P 50 mg/kg/Day
------------------	------------------------------

Arm description:

Subjects were randomized to receive GWP42003-P 50 mg/kg/day orally twice daily (morning and evening administration). Subjects completed a 4-week dose escalation period, titrating up to their assigned dose, before continuing on a stable dose of blinded GWP42003-P for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	Cannabidiol, CBD
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

GWP42003-P was presented an oral solution containing 100 mg/mL cannabidiol dissolved in the excipients sesame oil and anhydrous ethanol with added sweetener and strawberry flavoring.

Arm title	DBP: Placebo
------------------	--------------

Arm description:

Subjects were randomized to receive placebo matched to GWP42003-P orally twice daily (morning and evening administration) for 16 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo solution dissolved in the excipients sesame oil and anhydrous ethanol with added sweetener and strawberry flavoring.

Number of subjects in period 1	DBP: GWP42003-P 25 mg/kg/Day	DBP: GWP42003-P 50 mg/kg/Day	DBP: Placebo
Started	75	73	76
Completed	65	61	75
Not completed	10	12	1
Withdrawn by parent/guardian	1	1	1
Physician decision	-	1	-
Adverse event, non-fatal	8	8	-
Met withdrawal criteria	-	2	-
Difficulties taking IMP	1	-	-

Period 2

Period 2 title	Open Label Phase (OLE)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	OLE: GWP42003-P (DBP) then GWP42003-P (OLE)

Arm description:

Subjects who completed the DBP entered a 2-week blinded transition prior to the OLE. During the transition, open-label IMP was titrated up to 25 mg/kg/day whilst blinded IMP was simultaneously tapered down to zero to accommodate those subjects who had been randomized to placebo during the double-blind phase of the study. Transition from the DBP to the OLE were as follows: Subjects receiving placebo during the DBP were titrated up to receive 25 mg/kg/day in OLE phase, subjects receiving 25 mg/kg/day of GWP42003-P during the DBP continued to receive 25 mg/kg/day in OLE phase, subjects receiving 50 mg/kg/day of GWP42003-P during the DBP were tapered (10% per day for 5 days) to receive 25 mg/kg/day of GWP42003-P during OLE. All subjects completed the transition and entered the OLE taking 25 mg/kg/day GWP42003-P.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	Cannabidiol, CBD
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

GWP42003-P was presented an oral solution containing 100 mg/milliliter (mL) cannabidiol (CBD) dissolved in the excipients sesame oil and anhydrous ethanol with added sweetener and strawberry flavoring.

Arm title	OLE: Placebo (DBP) then GWP42003-P (OLE)
------------------	--

Arm description:

Subjects who completed the DBP entered a 2-week blinded transition prior to the OLE. During the transition, open-label IMP was titrated up to 25 mg/kg/day whilst blinded IMP was simultaneously tapered down to zero to accommodate those subjects who had been randomized to placebo during the double-blind phase of the study. Transition from the DBP to the OLE were as follows: Subjects receiving placebo during the DBP were titrated up to receive 25 mg/kg/day in OLE phase, subjects receiving 25 mg/kg/day of GWP42003-P during the DBP continued to receive 25 mg/kg/day in OLE phase, subjects receiving 50 mg/kg/day of GWP42003-P during the DBP were tapered (10% per day for 5 days) to receive 25 mg/kg/day of GWP42003-P during OLE. All subjects completed the transition and entered the OLE taking 25 mg/kg/day GWP42003-P.

Arm type	Experimental
Investigational medicinal product name	Placebo then GWP42003-P
Investigational medicinal product code	
Other name	Cannabidiol, CBD
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

DBP: Placebo oral solution. OLE: GWP42003-P was presented an oral solution containing 100 mg/mL CBD dissolved in the excipients sesame oil and anhydrous ethanol with added sweetener and strawberry flavoring.

Number of subjects in period 2^[1]	OLE: GWP42003-P (DBP) then GWP42003-P (OLE)	OLE: Placebo (DBP) then GWP42003-P (OLE)
Started	124	75
Completed	22	12
Not completed	102	63
Transition To Commercial Product	1	-
Consent withdrawn by subject	10	4
Physician decision	3	1
Adverse event, non-fatal	8	10
Other	69	39
Met withdrawal criteria	2	2
Withdrawal by Parent/Guardian	8	7
Lost to follow-up	1	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Only 199 subjects were transitioned from the DBP to OLE phase. Two subjects did not enter the transition period of the OLE phase.

Vital sign measurements included body temperature, pulse rate, respiration rate, including blood pressure taken in a sitting position at rest for 5 minutes. Analysis was performed in OLE Safety Analysis Set population.

End point type	Secondary
----------------	-----------

End point timeframe:

OLE treatment period (up to approx 4 years)

End point values	OLE: GWP42003-P (DBP) then GWP42003-P (OLE)	OLE: Placebo (DBP) then GWP42003-P (OLE)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	124	75		
Units: Subjects				
Sitting Systolic Blood Pressure < -20 mmHg	3	3		
Sitting Systolic Blood Pressure > 20 mmHg	2	2		
Sitting Diastolic Blood Pressure < -10 mmHg	7	2		
Sitting Diastolic Blood Pressure > 10 mmHg	8	9		
Pulse Rate < -10 beats/min	13	7		
Pulse Rate > 10 beats/min	9	9		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

DBP: From the start of treatment up to Week 22; OLE: From the start of treatment up to 4 years.

Adverse event reporting additional description:

Safety Analysis Set, comprised of subjects randomized to treatment who received at least 1 dose of IMP. Treatment-emergent adverse events were defined as adverse events with a start date on or after the first dose of IMP throughout the study.

Assessment type	Systematic

Reporting groups

Reporting group title	DBP: GWP42003-P 25 mg/kg/Day
-----------------------	------------------------------

Reporting group description:

Subjects were randomized to receive GWP42003-P 25 milligrams per kilogram per day (mg/kg/day) orally twice daily (morning and evening administration). Subjects completed a 4-week dose-escalation period, titrating up to their assigned dose, before continuing on a stable dose of blinded GWP42003-P for 12 weeks.

Reporting group title	DBP: GWP42003-P 50 mg/kg/Day
-----------------------	------------------------------

Reporting group description:

Subjects were randomized to receive GWP42003-P 50 mg/kg/day orally twice daily (morning and evening administration). Subjects completed a 4-week dose escalation period, titrating up to their assigned dose, before continuing on a stable dose of blinded GWP42003-P for 12 weeks.

Reporting group title	DBP: Placebo
-----------------------	--------------

Reporting group description:

Subjects were randomized to receive placebo matched to GWP42003-P orally twice daily (morning and evening administration) for 16 weeks.

Reporting group title	OLE: GWP42003-P (DBP) then GWP42003-P (OLE)
-----------------------	---

Reporting group description:

Subjects who completed the DBP entered a 2-week blinded transition prior to the OLE. During the transition, open-label IMP was titrated up to 25 mg/kg/day whilst blinded IMP was simultaneously tapered down to zero to accommodate those subjects who had been randomized to placebo during the double-blind phase of the study. Transition from the DBP to the OLE were as follows: Subjects receiving placebo during the DBP were titrated up to receive 25 mg/kg/day in OLE phase, subjects receiving 25 mg/kg/day of GWP42003-P during the DBP continued to receive 25 mg/kg/day in OLE phase, subjects receiving 50 mg/kg/day of GWP42003-P during the DBP were tapered (10% per day for 5 days) to receive 25 mg/kg/day of GWP42003-P during OLE. All subjects completed the transition and entered the OLE taking 25 mg/kg/day GWP42003-P.

Reporting group title	OLE: Placebo (DBP) then GWP42003-P (OLE)
-----------------------	--

Reporting group description:

Subjects who completed the DBP entered a 2-week blinded transition prior to the OLE. During the transition, open-label IMP was titrated up to 25 mg/kg/day whilst blinded IMP was simultaneously tapered down to zero to accommodate those subjects who had been randomized to placebo during the double-blind phase of the study. Transition from the DBP to the OLE were as follows: Subjects receiving placebo during the DBP were titrated up to receive 25 mg/kg/day in OLE phase, subjects receiving 25 mg/kg/day of GWP42003-P during the DBP continued to receive 25 mg/kg/day in OLE phase, subjects receiving 50 mg/kg/day of GWP42003-P during the DBP were tapered (10% per day for 5 days) to receive 25 mg/kg/day of GWP42003-P during OLE. All subjects completed the transition and entered the OLE taking 25 mg/kg/day GWP42003-P.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 June 2017	Incorporated additional updates to the trial design: <ul style="list-style-type: none">• Statistical analysis was amended to reflect the re-categorization of secondary endpoints.• Clarification of exclusion criteria relating to mTOR inhibitors to reflect their changing regulatory approval status.• Provision was made to extend the OLE for subjects in the US and Poland. subjects in other countries would be able to access continued supply of investigational medicinal product (IMP) by alternative schemes.• Administration of cannabidiol through a gastrostomy (G)/nasogastric (NG) feeding tube was added as an option after consultation with the medical monitor.• Direction included that subject/caregiver to record information about meals on pharmacokinetic testing days.
07 August 2018	Incorporated additional updates to the trial design: <ul style="list-style-type: none">• An inclusion criterion was added to ensure that eligible subjects must be taking 1 or more AEDs at a dose which had been stable for at least 4 weeks prior to screening.• Inclusion criteria amended to clarify that eligible subjects must have a well-documented clinical history of epilepsy which is not completely controlled by their current AEDs.• Clarification about the 4-hour post-dose 12-lead electrocardiogram (ECG).• Clarification on PK blood samples.• For consistency with the Schedule of Assessments, the protocol has been amended to clarify that eligibility must be assessed at Screening and Randomization according to the criteria.• Clarification that continued use of GWP42003-P following the 'End of Treatment' visit of the OLE refers to use of GWP42003-P outside of the GWEP1521 trial.• Clarification that in subjects with profound cognitive impairment aged 6 years or older, where completion of the Columbia-Suicide Severity Rating Scale (C-SSRS) is not appropriate, suicidality is assessed by the investigator's clinical judgment following interview of the subject.• Clarification that the Study Medication Use and Behavior Survey should be administered at the final dosing visit of the blinded phase and again at the final dosing visit of the OLE.• Clarification that the blinded phase of this study would be locked and unblinded prior to completion of the OLE and that the SAP covering the blinded phase would be finalized prior to unblinding the blinded phase.
06 September 2018	Incorporated updates to include: <ul style="list-style-type: none">• Changes in primary endpoint analysis method and wording• Changes to the proposed sensitivity analyses
23 April 2019	Incorporated updates to change the order of the hierarchy of testing.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
