

Clinical trial results:

A Randomized, Open-Label, Multicenter Study to Evaluate the Efficacy, Safety, and Pharmacokinetics of Co-Administration of ABT-493 and ABT-530 (or ABT-493/ABT-530) With and Without Ribavirin in Adults With Chronic Hepatitis C Virus (HCV) Infection who Failed a Prior Direct-Acting Antiviral Agent (DAA)-Containing Therapy

Summary

EudraCT number	2015-002350-13

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 January 2017
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	23 January 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to assess the efficacy and safety of ABT-493 and ABT-530 with or without ribavirin (RBV) in participants with chronic hepatitis C virus, (HCV)-infection who previously failed treatment with a direct acting antiviral (DAA)-containing regimen.

Protection of trial subjects:

Subject read and understood the information provided about the study and gave written permission.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 April 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	France: 9
Country: Number of subjects enrolled	Australia: 24
Country: Number of subjects enrolled	Puerto Rico: 3
Country: Number of subjects enrolled	United States: 94
Worldwide total number of subjects	141
EEA total number of subjects	20

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	126
From 65 to 84 years	15
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

This study included a 42-day screening period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A

Arm description:

ABT-493 (200 mg) once daily (QD) co-administered with ABT-530 (80 mg) QD for 12 weeks in chronic HCV genotype 1- infected participants without cirrhosis.

Arm type	Experimental
Investigational medicinal product name	ABT-493, ABT-530
Investigational medicinal product code	
Other name	ABT-493 also known as glecaprevir, ABT-530 also known as pibrentasvir, ABT-493/ABT-530 (ABT-493 coformulated with ABT-267) also known as MAVIRET
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

ABT-493 (tablet) dosed with ABT-530 (tablet)

Arm title	ARM B
------------------	-------

Arm description:

ABT-493 (300 mg) once daily (QD) co-administered with ABT-530 (120 mg) QD plus ribavirin (RBV) for 12 weeks in chronic HCV genotype 1- infected participants without cirrhosis.

Arm type	Experimental
Investigational medicinal product name	ABT-493, ABT-530
Investigational medicinal product code	
Other name	ABT-493 also known as glecaprevir, ABT-530 also known as pibrentasvir, ABT-493/ABT-530 (ABT-493 coformulated with ABT-267) also known as MAVIRET
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

ABT-493 (tablet) dosed with ABT-530 (tablet)

Investigational medicinal product name	ribavirin (RBV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablet

Arm title	ARM C
------------------	-------

Arm description:
 ABT-493 (300 mg) once daily (QD) co-administered with ABT-530 (120 mg) QD for 12 weeks in chronic HCV genotype 1- infected participants without cirrhosis.

Arm type	Experimental
Investigational medicinal product name	ABT-493, ABT-530
Investigational medicinal product code	
Other name	ABT-493 also known as glecaprevir, ABT-530 also known as pibrentasvir, ABT-493/ABT-530 (ABT-493 coformulated with ABT-267) also known as MAVIRET
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

ABT-493 (tablet) dosed with ABT-530 (tablet)

Arm title	ARM D
------------------	-------

Arm description:

ABT-493/ABT-530 (300 mg/120 mg) coformulated once daily (QD) for 12 weeks in HCV genotypes 1- or 4-6- infected participants with or without cirrhosis.

Arm type	Experimental
Investigational medicinal product name	ABT-493/ABT-530
Investigational medicinal product code	
Other name	ABT-493 also known as glecaprevir, ABT-530 also known as pibrentasvir, MAVIRET
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablet; ABT-493 coformulated with ABT-530

Arm title	ARM E
------------------	-------

Arm description:

ABT-493/ABT-530 (300 mg/120 mg) coformulated once daily (QD) for 16 weeks in HCV genotype 1- or 4-6- infected participants with or without cirrhosis.

Arm type	Experimental
Investigational medicinal product name	ABT-493/ABT-530
Investigational medicinal product code	
Other name	ABT-493 also known as glecaprevir, ABT-530 also known as pibrentasvir, MAVIRET
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablet; ABT-493 coformulated with ABT-530

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) and serious adverse events (TESAEs) were collected from the time of study drug administration until 30 days after the last dose of study drug (up to 20 weeks).

Adverse event reporting additional description:

TEAEs and TESAEs are defined as any AE or SAE with an onset date that is after the first dose of study drug until 30 days after the last dose of study drug and were collected whether elicited or spontaneously reported by the participant.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 March 2015	The main purpose of this amendment was to update the dosage strength of ABT-530 from 120 mg QD to 80 mg QD in treatment Arm A and of ABT-493 from 200 mg QD to 300 mg QD in treatment Arm B; clarify inclusion criterion (permitted prior direct acting antiviral agent [DAA] treatment); clarify the definition of on-treatment failure in DAA-experienced subjects; and revise treatment extension (from additional 4 weeks [total duration of 16 weeks] to 12 weeks [total duration of 24 weeks], add ribavirin and sofosbuvir to the treatment regimen for the subjects to whom treatment extension criteria are applied, and classify NS3/4A/NS5A-experienced subjects as NS3/4A-experienced/NS5A-naïve for the purpose of treatment extension).
24 April 2015	The main purpose of this amendment was to update the definitions of on-treatment failure and post-treatment failure; clarify inclusion criteria (provide examples of prior DAA-containing therapies); update secondary objective to include evaluation of 2 dose levels of ABT-530; and clarify treatment extension criteria.
16 June 2015	The main purpose of this amendment was to clarify inclusion criteria (definition of true abstinence, clarify when additional assessments for liver cirrhosis need to be made based on the initial test results); stop enrollment in Arm A; update virologic stopping criterion (remove "Failure to achieve hepatitis C virus [HCV] ribonucleic acid [RNA] < LLOQ by Week 6"); and clarify adverse event (AE) collection period.
10 September 2015	The main purpose of this amendment was to add Part 2 of the study based upon meeting pre specified efficacy and safety criteria; include use of ABT-493/ABT-530 co-formulated tablet for Part 2; clarify rescreening for Part 2; update inclusion criteria (remove upper age limit for inclusion in Part 2; allow enrollment of GT4, 5, and 6 in Part 2; specify acceptable methods of contraception in Parts 1 and 2; clarify the accepted definitions of chronic HCV; specify eligible prior DAA regimens in Part 2; remove the upper BMI limit in Part 2; clarify accepted criteria of defining absence of cirrhosis and include criteria for defining presence of compensated cirrhosis in Part 2; exclude subjects with hepatocellular carcinoma [HCC] in Part 2) and exclusion criteria (exclude subjects with HCV RNA load of < 1000 IU/mL in Part 2); update prohibited therapy; clarify timing of study procedures; and clarify AE collection period.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
