

Clinical trial results:

A Phase 3, Multicenter Study with a 36-Week Open-Label Period Followed by a Randomized Double-Blind Withdrawal Period from Week 36 to Week 104 to Evaluate the Long Term Efficacy and Safety of Ixekizumab (LY2439821) 80 mg Every 2 Weeks in Biologic Disease-Modifying Antirheumatic Drug-Naive Patients with Active Psoriatic Arthritis

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 October 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 October 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study is to evaluate the safety and long-term efficacy of ixekizumab compared to placebo in participants with active psoriatic arthritis.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 November 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Adolescents (12-17 years)	0
Adults (18-64 years)	371
From 65 to 84 years	23
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study had four periods: Period 1: Screening period lasting from 4 to 30 days before Week 0, Period 2: Initial open-label treatment period from Week 0 up to Week 36, Period 3: randomized double-blind withdrawal period from Week 36 to week 104 (or, early termination or relapse) and Period 4: post treatment follow-up.

Pre-assignment

Screening details:

Participants were randomized during week 36 to week 64. The criteria for randomization in period 3 was having received ixekizumab (IXE) 80 mg Q2W for at least 6 months and meeting Coates criteria for minimal disease activity (MDA) for 3 consecutive months over 4 consecutive visits. The criteria was met anytime from 36 to 64 weeks.

Period 1

Period 1 title	Open-Label Treatment Period
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Ixekizumab Open Label
-----------	-----------------------

Arm description:

Open-Label Treatment Period (OLTP): Starting dose of 160 milligrams (mg) ixekizumab given as two subcutaneous (SC) injections at baseline (Week 0) followed by 80 mg given as one SC injection every two weeks (Q2W) from week 2 to randomization (week 36 to 64).

Arm type	Experimental
Investigational medicinal product name	Ixekizumab
Investigational medicinal product code	
Other name	LY2439821
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

160 milligrams (mg) ixekizumab given as two subcutaneous (SC) injections at baseline (Week 0) followed by 80 mg given as one SC injection every two weeks (Q2W) from week 2 to randomization (week 36 to 64).

Number of subjects in period 1	Ixekizumab Open Label
Started	394
Received at least one dose of study drug	394
Met randomization Criteria	158 ^[1]
Non-randomized	133 ^[2]
Completed	291
Not completed	103
Consent withdrawn by subject	21
Adverse event, non-fatal	14
Death	2

No PI Available	2
Sponsor Decision	1
Lost to follow-up	1
Lack of efficacy	61
Protocol deviation	1

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The reason why randomized + non randomized do not sum up to the total entered participants is because 103 participants discontinued open label treatment.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The reason why randomized + non randomized do not sum up to the total entered participants is because 103 participants discontinued open label treatment.

Period 2

Period 2 title	Double-Blind Withdrawal Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	IXE80Q2W Non-randomized

Arm description:

Participants completed open label but did not meet criteria for randomization to the double-blind Withdrawal Period.

Participants continued to receive 80 mg given as one SC injection every two weeks during the double-blind withdrawal period.

Arm type	Experimental
Investigational medicinal product name	Ixekizumab
Investigational medicinal product code	
Other name	LY2439821
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

80 mg given as one SC injection every two weeks during the double-blind withdrawal period.

Arm title	Ixekizumab
------------------	------------

Arm description:

Participants completed open label and met criteria for randomization to the double-blind Withdrawal Period.

Double-Blind Withdrawal Period: 80 mg ixekizumab given as one SC injection Q2W from randomization to week 104 (or, early termination or relapse).

Arm type	Experimental
Investigational medicinal product name	Ixekizumab
Investigational medicinal product code	
Other name	LY2439821
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

80 mg ixekizumab given as one SC injection Q2W from randomization to week 104 (or, early termination or relapse).

Arm title	Placebo
------------------	---------

Arm description:

Participants completed open label and met criteria for randomization to the double-blind Withdrawal Period.

Double-Blind Withdrawal Period: Placebo given as one SC injection Q2W any time from randomization to week 104 (or, early termination or relapse)

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo given as one SC injection Q2W any time from randomization to week 104 (or, early termination or relapse)

Number of subjects in period 2	IXE80Q2W Non-randomized	Ixekizumab	Placebo
Started	133	79	79
Relapsed	0 [3]	67 [4]	30 [5]
Completed	118	77	78
Not completed	15	2	1
Consent withdrawn by subject	-	2	-
Adverse event, non-fatal	4	-	1
Declined Transfer to a Different Site	1	-	-
Lack of efficacy	10	-	-

Notes:

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The reason why randomized + non randomized do not sum up to the total entered participants is because 103 participants discontinued open label treatment.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The reason why randomized + non randomized do not sum up to the total entered participants is because 103 participants discontinued open label treatment.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The reason why randomized + non randomized do not sum up to the total entered participants is because 103 participants discontinued open label treatment.

Period 3

Period 3 title	Post Treatment follow-up Period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	IXE80Q2W Post-Treatment Follow-up Period

Arm description:

Participants did not receive any study treatment during post treatment follow-up period. Post-Treatment Follow-up Period was summarized by last treatment assigned to a participant prior to entering the post-treatment follow up period.

Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Placebo Post-Treatment Follow-up Period

Arm description:

Participants did not receive any study treatment during post treatment follow-up period. Placebo Post-Treatment Follow-up Period was summarized by last treatment assigned to a participant prior to entering the post-treatment follow up period.

Arm type	No intervention
No investigational medicinal product assigned in this arm

Primary: Double-Blind Withdrawal Period: Time to Relapse (No Longer Meeting Coates Criteria for Minimal Disease Activity [MDA])

End point title	Double-Blind Withdrawal Period: Time to Relapse (No Longer Meeting Coates Criteria for Minimal Disease Activity [MDA])
End point description: Relapse is loss of MDA response. MDA is achieved if 5 of 7 outcome measures are fulfilled: TJC ≤ 1 ; SJC ≤ 1 ; psoriasis activity & severity index (PASI total score) ≤ 1 or body surface area (BSA) ≤ 3 ; participant pain VAS score of ≤ 15 ; participant global disease activity VAS score of ≤ 20 ; HAQ-DI score ≤ 0.5 ; and tender enthesal points ≤ 1 . Participants met the randomization criteria if they had MDA for 3 consecutive months over 4 consecutive visits. Time-to relapse was calculated in weeks as follows: ((Date of Relapse) - Date of first injection of randomized study treatment in period 3) + 1 divided by 7. If the date of first dose is missing, the date of randomization will be used. Participants completing Period 3 will be censored at date of completion (the date of the last scheduled visit in the period). Participants without a date of completion or discontinuation for Period 3 will be censored at latest non-missing date out of the following dates: date of last dose & date of last attended visit in Period 3.	
End point type	Primary

End point timeframe:

Double Blind Randomization through Week 104 (or Early Termination or Relapse)

Secondary: Double-Blind Withdrawal Period: Time to Loss of Response in Each Individual Component of MDA: Tender Joint Count 68 (TJC)

End point title	Double-Blind Withdrawal Period: Time to Loss of Response in Each Individual Component of MDA: Tender Joint Count 68 (TJC)
-----------------	---

End point description:

TJC is the number of tender and painful joints determined for each participant by examination of 68 joints. TJC possible values range from 0 to 68. A lower TJC indicated less number of joints with tenderness. A higher TJC indicated more joint tenderness. Joints were assessed by pressure and joint manipulation on physical examination. Participants were asked for pain sensations on these manipulations and watched for spontaneous pain reactions. Any positive response on pressure, movement, or both was translated into a single tender-versus-nontender dichotomy.

Loss of Response = Not Meeting less than or equal to 1 TJC.

Time to loss of response (in weeks) = (date of loss of response - date of first injection of randomized dose of study treatment in the Randomized Double-Blind Withdrawal Period + 1)/7.

Censored participants: Ixekizumab= 29 and Placebo= 16.

Statistical analyses

Statistical analysis title	Time to Loss of Response (PatGA and VAS Score)
Statistical analysis description:	
Log Rank Test adjusting for geographic region and cDMARD use at the time of double blind randomization.	
Comparison groups	Ixekizumab v Placebo
Number of subjects included in analysis	151
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Logrank

Secondary: Double-Blind Withdrawal Period: Time to Loss of Response in Each Individual Component of MDA: Health Assessment Questionnaire-Disability Index (HAQ-DI)

End point title	Double-Blind Withdrawal Period: Time to Loss of Response in Each Individual Component of MDA: Health Assessment Questionnaire-Disability Index (HAQ-DI)
-----------------	---

End point description:

The HAQ-DI questionnaire assesses the participant's self-perception on the degree of difficulty [0 (without any difficulty), 1 (with some difficulty), 2 (with much difficulty), and 3 (unable to do)] when dressing and grooming, arising, eating, walking, hygiene, reaching, gripping, and performing other daily activities. Scores for each functional area were averaged to calculate HAQ-DI scores, which ranged from 0 (no disability) to 3 (severe disability). A decrease in HAQ-DI score indicated an improvement in the participant's condition.

Loss of Response = Not Meeting less than or equal to 0.5 HAQ-DI.

Time to loss of response (in weeks) = (date of loss of response - date of first injection of randomized dose of study treatment in the Randomized

Double-Blind Withdrawal Period + 1)/7.

Censored participants: Ixekizumab= 55 and Placebo=53.

End point type	Secondary
----------------	-----------

End point timeframe:

Double Blind Randomization through Week 104 (or Early Termination or Relapse)

All participants who received at least one dose of study drug in the randomized withdrawal Intent-to-Treat population Who had HAQ-DI ≤ 0.5 at Time of randomization.

End point values	Ixekizumab	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	69 ^[10]	68 ^[11]		
Units: weeks				
median (confidence interval 95%)	9999 (9999 to 9999)	9999 (48.14 to 9999)		

Notes:

[10] - 9999=NA. Median and CI could not be estimated due to insufficient events in analysis duration.

[11] - 9999=NA. Median and Upper CI could not be estimated due to insufficient events in analysis duration.

Reporting groups

Reporting group title	Ixekizumab Open Label
-----------------------	-----------------------

Reporting group description:

Open-Label Treatment Period: Starting dose of 160 milligrams (mg) ixekizumab given as two subcutaneous (SC) injections at baseline (week 0) followed by 80 mg given as one SC injection every two weeks (Q2W) from week 2 to randomization (week 36 to 64).

Reporting group title	Ixekizumab
-----------------------	------------

Reporting group description:

Participants completed open label and met criteria for randomization to the double-blind Withdrawal Period.

Double-Blind Withdrawal Period: 80 mg ixekizumab given as one SC injection Q2W from randomization to week 104 (or, early termination or relapse).

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants completed open label and met criteria for randomization to the double-blind Withdrawal Period.

Double-Blind Withdrawal Period: Placebo given as one SC injection Q2W any time from randomization to week 104 (or, early termination or relapse).

Reporting group title	IXE80Q2W Non-randomized Population to Withdrawal Period
-----------------------	---

Reporting group description:

Participants completed open label but did not meet criteria for randomization to the double-blind Withdrawal Period.

Participants continued to receive 80 mg given as one SC injection every two weeks during the double-blind withdrawal period.

Reporting group title	IXE80Q2W Relapse Period
-----------------------	-------------------------

Reporting group description:

IXE80Q2W Relapse Period

Double Blind Period: 80 mg ixekizumab given as one SC injection Q2W from randomization to week 104 (or, early termination or relapse).

Double Blind Period: Placebo given as one SC injection Q2W any time from randomization to week 104 (or, early termination or relapse).

Reporting group title	IXE80Q2W Post-Treatment Follow-up Period
-----------------------	--

Reporting group description:

Participants did not receive any study treatment during post treatment follow-up period. Post-Treatment Follow-up Period was summarized by last treatment assigned to a participant prior to entering the post-treatment follow up period.

Reporting group title	Placebo Post-Treatment Follow-up Period
-----------------------	---

Reporting group description:

Participants did not receive any study treatment during post treatment follow-up period. Placebo Post-Treatment Follow-up Period was summarized by last treatment assigned to a participant prior to

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: This event is gender specific, only occurring in male or female subjects. The number of subjects exposed has been adjusted accordingly.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: This event is gender specific, only occurring in male or female subjects. The number of subjects exposed has been adjusted accordingly.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed to this adverse event. These numbers are expected to be equal.

Justification: This event is gender specific, only occurring in male or female subjects. The number of subjects exposed has been adjusted accordingly.

Frequency threshold for reporting non-serious adverse events: 5 %

Notes:

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This event is gender specific, only occurring in male or female subjects. The number of subjects exposed has been adjusted accordingly.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
