

## Clinical trial results:

### Anti-donor alloreactivity-guided CN1 minimization versus unguided standard triple therapy in living-donor kidney transplantation

#### Summary

EudraCT number	2015-002465-28
Trial protocol	DE
Global end of trial date	05 February 2021

#### Results information

Result version number	v1
This version publication date	18 June 2022
First version publication date	18 June 2022
Summary attachment (see zip file)	ICANMINI Final Study report (ICANMINI-FSR-220531.pdf)

#### Trial information

##### Trial identification

Sponsor protocol code	ICANMINI
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 May 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 February 2021
Global end of trial reached?	Yes
Global end of trial date	05 February 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the effect of an anti-donor alloreactivity guided CNI minimization on the evolution of renal function

Protection of trial subjects:

In principle, the Safety population should include all patients who had taken at least one dose of the study medication. Yet, patients not treated, not treated for certain or patients with no observation after first intake of study medication were excluded from the safety evaluation. Excluding patients with no observation after the first intake from the safety population serves the purpose of consumer protection, as their exclusion leads to higher percentages of adverse events.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 35
Worldwide total number of subjects	35
EEA total number of subjects	35

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

#### Recruitment details:

Due to difficulties in study conduct and recruitment, further enhanced by the pandemic situation with COVID-19, it was decided to stop recruitment prematurely on 20-APR-2020. Already included patients remained in the follow up until their regular 12 months visit. The study end then occurred with the last patient last visit (LPLV) on 05-FEB-2021.

### Pre-assignment

#### Screening details:

Between 23-May-2016(First Patient First Visit: Pat # 001) and 14-JAN-2020 (Last Patient First Visit: Pat. # 035) a total of 35 patients were included into the study (Table 4).

The first 28 Patients were recruited under the contract with Astellas and the last patient (pat. #28) included 26-Feb-2019 within this contract. Pat 29 (included 19-Mar-2019

### Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Reference

#### Arm description:

Unguided standard triple therapy with prolonged-release tacrolimus, EC mycophenolic acid (720 mg b.i.d.) and steroids.

Tacrolimus target trough levels 8-12 ng/ml 0-w4, 8-12 ng/ml w5-w12; 6-8 ng/ml w13-m12

Arm type	unguided
Investigational medicinal product name	tacrolimus
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral drops
Routes of administration	Oral use

#### Dosage and administration details:

Tacrolimus target trough levels 8-12 ng/ml 0-w4, 6-8 ng/ml w5-w12; 4-6 ng/ml w13-m12

<b>Arm title</b>	Investigational

### Statistical analyses

Statistical analysis title	Primary Efficacy Criterion
Statistical analysis description: Among various measures of renal function, the MDRD-4 formula has been selected for the primary endpoint. The parameter to be tested will therefore be the eGFR calculated by the MDRD-4 formula at	

12 months after transplantation.

The 4-variable MDRD formula estimates GFR using the four variables: serum creatinine, age, ethnicity, and gender (Version 2000 [10]):

$eGFR_{12M} (ml/min/1.73 m^2) = 186 * \text{Serum Creatinine (mg/dl)}^{-1.154}$

\*  $age^{-0.203}$

\* [1.210 if black]

\* [0.742 if female]

(Creatinine level

Comparison groups	Reference v Investigational

Analysis specification	Pre-specified
Analysis type	other <sup>[3]</sup>
P-value	< 0.05 <sup>[4]</sup>
Method	Wilcoxon (Mann-Whitney)
Parameter estimate	Cox proportional hazard
Point estimate	95
Confidence interval	
level	90 %
sides	2-sided
lower limit	0
upper limit	95
Variability estimate	Standard deviation
Dispersion value	0.8881

Notes:

[3] - The statistical analysis was planned after completion of the trial, which is when all patients had completed their follow up phase. This final analysis therefore includes all efficacy and safety data until end of study.

Statistical analysis is based on the final statistical analysis plan, dated 07-FEB-2022 which is available in the appendix.

If p values are calculated in the area of explorative analysis, they should be presented explicitly without referring to hypotheses or a significance level

[4] - The confirmatory analysis is based on the ITT population. A detailed analysis plan is given in the Study Protocol amendment 1, dated MMM DD, YYYY and elaborated with the final statistical analysis plan dated 30-JAN-2019.

The primary analysis had been

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

First Patient First Visit: 23-May-2016

Last Patient Last Visit: 05-Feb-2021

Adverse event reporting additional description:

A qualified physician associated with the study will be available to assess clinical signs and symptoms that may be indicative of an adverse event. All physical examination findings, vital sign abnormalities, and clinical laboratory abnormalities will be captured as AEs when deemed medically significant by the investigator.

Assessment type	Systematic
