Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 October 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 October 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the effect of ESN364 on the severity and frequency of hot flashes (HF) in early postmenopausal women suffering from HF, in terms of changes in weekly Hot Flash Score (HFS) from baseline to Week 12.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization (ICH) Note for Guidance on Good Clinical Practice (GCP) (CPMP/ICH/135/95) and with applicable local requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 87
Worldwide total number of subjects	87
EEA total number of subjects	87

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	87
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Women between 40-65 yrs with spontaneous amenorrhea for at least 12 consecutive M or at least 6M with biochemical criteria of menopause or had bilateral oophorectomy, who have experienced at least 49 moderate or severe HF or night sweats over a period of 7 consecutive days; with at least 4 of those days with 7 or more moderate or severe HF per day.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Subject, Data analyst, Carer, Assessor

Blinding implementation details:

Blinding was achieved by the double-dummy method with placebo identical in smell, taste, and appearance.

Arms

Are arms mutually exclusive?	Yes
Arm title	ESN364

Arm description: -

Arm type	Experimental
Investigational medicinal product name	ESN364
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received 90 mg of ESN364 orally twice a day for 12 weeks.

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received 90 mg of placebo orally twice a day for 12 weeks.

Number of subjects in period 1	ESN364	Placebo
Started	43	44
Completed	40	40
Not completed	3	4
Consent withdrawn by subject	-	2
Adverse event, non-fatal	2	-
Subject continued to have too many hot flashes	-	1
Personal reason	1	-
Incl/Excl. criteria not met	-	1

Reporting group title	Placebo
Reporting group description: -	

Primary: Change from baseline to Week 12 in weekly Hot Flash Score (HFS).

End point title	Change from baseline to Week 12 in weekly Hot Flash Score (HFS).
End point description:	The HFS was based on the hot flash severity and frequency which were assessed at a minimum twice a day. The HFS was calculated as the (number of mild HF/day × 1) + (number of moderate HF/day × 2) + (number of severe HF/day × 3). Higher scores indicated worse symptoms. The analysis population was Intent-to-treat (ITT) and it consisted of all randomized subjects who received at least one dose of the study medication and subjects who have had post-baseline efficacy data.
End point type	Primary
End point timeframe:	
From baseline through week 12	

End point values	ESN364	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	43	44		
Units: Change from baseline to week 12				
arithmetic mean (confidence interval 95%)	-26.51 (-30.83 to -22.18)	-12.19 (-16.55 to -7.83)		

Statistical analyses

sides	2-sided
lower limit	-16.89
upper limit	-7.79

Notes:

[1] - P-value: < 0.001

Secondary: Change from baseline over time in weekly HF severity score (Method 1).

End point title	Change from baseline over time in weekly HF severity score (Method 1).
-----------------	--

End point description:

Method 1 takes into account the number and severity of moderate and severe HF occurred during a given time period. The Hot Flash Severity score (based on severity and frequency) was calculated as follows:

HF Severity score = [(number of moderate hot flashes/day × 2) + (number of severe hot flashes/day × 3)]/(#moderate HF + #severe HF)

The weekly hot flash severity was calculated: Mean HF Severity day-score over 1 week

Higher scores indicate worse symptoms. For weekly HF severity score calculated by method 1 the maximum was 3 (the maximum is attained when all HF are severe). The analysis population was Intent-to-treat (ITT).

Secondary: Change in overall mean score from baseline over time in Hot Flash Related daily Interference Scale (HFRDIS).

End point title	Change in overall mean score from baseline over time in Hot Flash Related daily Interference Scale (HFRDIS).
-----------------	--

End point description:

The HFRDIS was completed at the clinical site in the ePRO diary, at any time during the visit. The HFRDIS is a 10-item scale which measures a woman's perceptions of the degree to which hot flashes interfere with 9 daily life activities (work, social activities, leisure, sleep, mood, concentration, relations with others, sexuality, enjoying life); the 10th item measures interference with overall quality of life. This scale was modeled after items on the Brief Pain Inventory and Brief Fatigue Inventory, both of which assess the extent to which pain or fatigue interfere with daily life. Subjects were asked to rate the extent to which hot flashes have interfered with each item during the previous 4-week time interval

using a 0 (do not interfere) to 10 (completely interfere) scale. The overall mean score is presented. The analysis population was Intent-to-treat (ITT).

Secondary: Changes from baseline over time in Leeds Sleep Evaluation Questionnaire (LSEQ).

End point title	Changes from baseline over time in Leeds Sleep Evaluation Questionnaire (LSEQ).
-----------------	---

End point description:

The subjects' sleep quality was evaluated every 4 weeks from the start of study drug intake (Visit 2) through the follow-up visit (Visit 6) using the LSEQ. The LSEQ is a visual analogue scale which requires respondents to place marks on a group of 10-cm lines representing the changes they have experienced in a variety of symptoms since the beginning of treatment. The LSEQ is a visual analogue scale which requires respondents to place marks on a group of 10-cm lines representing the changes they have experienced in a variety of symptoms since the beginning of treatment. Lines extend between extremes like "more difficult than usual" and "easier than usual". Responses were measured using a 100-mm scale and are averaged to provide a score for each domain. The analysis population was Intent-to-treat

(ITT).

Secondary: Changes from baseline over time in Greene Climacteric Scale (GCS).

End point title	Changes from baseline over time in Greene Climacteric Scale (GCS).
-----------------	--

End point description:

Changes in climacteric symptoms was evaluated every 4 weeks from the start of study drug intake (Visit 2) through the follow-up visit (Visit 6) using the GCS. The questionnaire was paper-based, administered at the clinical site at any time during the visit. The GCS is a 21-item scale which provides a brief but comprehensive and valid measure of climacteric symptomatology. Each item was rated by the subject according to its severity using a four-point rating scale from 0 (none) to 3 (severe). The first 20 items of the scale combine into three main independent symptom measures: psychological symptoms (items 1 to 11; score 0 to 33), physical symptoms (items 12 to 18; score 0 to 21), and vasomotor symptoms (items 19 to 20; score 0 to 6), by summing up the individual item scores. Item 21 was a probe for sexual dysfunction. The total score range was 0 to 63. Higher scores indicate worse symptoms. The analysis population was Intent-to-treat (ITT).

Secondary: Changes from baseline over time in Sheehan Disability Scale (SDS).

End point title	Changes from baseline over time in Sheehan Disability Scale (SDS).
End point description:	
The subjects' functional impairment of life was evaluated every 4 weeks from the start of study drug intake (Visit 2) through the follow-up visit (Visit 6) using the SDS. The questionnaire will be paper-based, administered at the clinical site at any time during the visit. The SDS is a composite of 3 self-rated items designed to measure the extent to which 3 major sectors in a patient's life are impaired by panic, anxiety, phobic, or depressive symptoms. The patient rates the extent to which his/her 1- work/school, 2- social life, and 3- family life are impaired by his/her symptoms on a 10-point visual analog scale. The 3 items may be summed into a single dimensional measure of global functional impairment that ranges from 0 (unimpaired) to 30 (highly impaired). The analysis population was Intent-to-treat (ITT).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 December 2015	The overall reason for the revision is to liberalize the participant selection criteria to facilitate recruitment, and to allow for a lower number of subjects to be included in the interim analysis. For a detailed overview of the changes, please refer to the Protocol Amendment section of the full CSR.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
