

## Clinical trial results:

**A phase 3 study investigating the efficacy, safety, and tolerability of Dupilumab administered to adult patients with severe atopic dermatitis who are not adequately controlled with or are intolerant to oral cyclosporine A, or when this treatment is not medically advisable**

### Summary

EudraCT number	2015-002653-35
Trial protocol	DE PL BE GB NL SK AT IE ES
Global end of trial date	29 March 2017

### Results information

Result version number	v3 (current)
This version publication date	04 September 2020
First version publication date	06 February 2019
Version creation reason	

### Trial information

#### Trial identification

Sponsor protocol code	R668-AD-1424
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02755649
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 March 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the efficacy of 2 dose regimens of dupilumab compared to placebo, administered with concomitant topical corticosteroids (TCS), in adult subjects with severe AD who are not adequately controlled with, or are intolerant to, oral CSA, or when this treatment is currently not medically advisable.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with the International Conference on Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 16
Country: Number of subjects enrolled	Poland: 107
Country: Number of subjects enrolled	Slovakia: 4
Country: Number of subjects enrolled	United Kingdom: 17
Country: Number of subjects enrolled	Austria: 7
Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Germany: 142
Country: Number of subjects enrolled	Ireland: 2
Country: Number of subjects enrolled	Russian Federation: 16
Country: Number of subjects enrolled	Spain: 3
Worldwide total number of subjects	325
EEA total number of subjects	309

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	316
From 65 to 84 years	9
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 73 sites in Europe. A total of 390 subjects were screened between 28 Jan 2016 and 14 Sep 2016. Of those, 325 subjects were enrolled into the study and randomized. Sixty subjects were considered screen failures, mostly due to unmet eligibility criteria.

### Pre-assignment

Screening details:

After providing informed consent, subjects were assessed for study eligibility. Screening assessments were performed between day -28 & day -15, prior to randomization. Subjects who met eligibility criteria at baseline (day 1) were randomized in a 1:1:1 ratio to receive dupilumab (weekly[QW] or every 2 weeks[Q2W]) or placebo.

### Period 1

Period 1 title	Started (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo QW + TCS

Arm description:

Subjects received one subcutaneous (SC) injection of matching placebo once per week (QW) (following two SC injections on day 1) from Week 1 to Week 15. All subjects were required to undergo treatment with topical corticosteroids (TCS) using a standardized regimen that continued through the end of the treatment period (Week 16). Starting at week 16, subjects could roll over into an open-label extension (OLE) study (R668-AD-1225), if they were considered eligible. Subjects who did not enter the OLE study were followed for up to an additional 12 weeks for safety ([Week 28, end of study (EOS) period]).

Arm type	Experimental
Investigational medicinal product name	Placebo (Matched to Dupilumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received SC injection of placebo matching to dupilumab QW following a loading dose on Day 1 from Week 1 to Week 15.

Investigational medicinal product name	Topical corticosteroids
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Ointment
Routes of administration	Topical use

Dosage and administration details:

Subjects received topical corticosteroids (TCS) using a standardized regimen through the end of the treatment period (Week 16).

<b>Arm title</b>	Dupilumab 300 mg Q2W + TCS
------------------	----------------------------

Arm description:

Subjects received one subcutaneous (SC) injection of dupilumab 300 mg every 2 weeks (Q2W) from Week 1 to Week 15 (following a SC loading dose of 600 mg on day 1). During weeks in which dupilumab was not administered, subjects received matching placebo. All subjects were required to undergo treatment with topical corticosteroids (TCS) using a standardized regimen that continued through the end of the treatment period (Week 16). Starting at week 16, subjects could roll over into an open-label

extension (OLE) study (R668-AD-1225), if they were considered eligible. Subjects who did not enter the OLE study were followed for up to an additional 12 weeks for safety ([Week 28, end of study (EOS) period])).

Arm type	Experimental
Investigational medicinal product name	Dupilumab 300 mg
Investigational medicinal product code	REGN668
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Subjects received one SC injection of Dupilumab every 2 weeks (Q2W) (following two SC injections on day 1) from Week 1 to Week 15.

Investigational medicinal product name	Topical corticosteroids (TCS)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Ointment
Routes of administration	Topical use

**Dosage and administration details:**

Subjects received treatment with topical corticosteroids (TCS) using a standardized regimen through the end of the treatment period (Week 16).

<b>Arm title</b>	Dupilumab 300 mg QW + TCS
------------------	---------------------------

**Arm description:**

Subjects received one subcutaneous (SC) injection of dupilumab 300 mg once per week (QW) (following an SC loading dose of 600 mg on day 1) from Week 1 to Week 15. All subjects were required to undergo treatment with topical corticosteroids (TCS) using a standardized regimen that continued through the end of the treatment period (Week 16). Starting at week 16, subjects could roll over into an open-label extension (OLE) study (R668-AD-1225), if they were considered eligible. Subjects who did not enter the OLE study were followed for up to an additional 12 weeks for safety ([Week 28, end of study (EOS) period])).

Arm type	Experimental
Investigational medicinal product name	Topical corticosteroids (TCS)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Ointment
Routes of administration	Topical use

**Dosage and administration details:**

Subjects received treatment with topical corticosteroids (TCS) using a standardized regimen through the end of the treatment period (Week 16).

Investigational medicinal product name	Dupilumab 300 mg
Investigational medicinal product code	REGN668
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

Subjects received one SC injection of dupilumab 300 mg once per week (QW) (following an SC loading dose of 600 mg on day 1) from Week 1 to Week 15.

<b>Number of subjects in period 1</b>	Placebo QW + TCS	Dupilumab 300 mg Q2W + TCS	Dupilumab 300 mg QW + TCS
Started	108	107	110
Completed (Week 16 - Treatment Period)	107	106	109

### Primary: Percentage of Subjects With Eczema Area and Severity Index (EASI) 75 (≥75% Improvement From Baseline) at Week 16

End point title	Percentage of Subjects With Eczema Area and Severity Index (EASI) 75 (≥75% Improvement From Baseline) at Week 16
-----------------	--

End point description:

The EASI score is used to measure the severity and extent of atopic dermatitis (AD) and measured erythema, infiltration, excoriation and lichenification on 4 anatomic regions of the body: head, trunk, upper and lower extremities. The total EASI score ranges from 0 (minimum) to 72 (maximum) points, with the higher scores reflecting the worse severity of AD. EASI-75 responders were the subjects who achieved ≥75% overall improvement in EASI score from baseline to Week 16. The analysis population for efficacy analyses is the Full Analysis Set (FAS) which included all randomized subjects. Efficacy analyses were based on the treatment allocated (as randomized).

## Secondary: Change From Baseline in Mean Weekly Dose of Topical Corticosteroid (TCS) Use During Treatment Period

End point title	Change From Baseline in Mean Weekly Dose of Topical Corticosteroid (TCS) Use During Treatment Period
-----------------	--

End point description:

The type, amount, frequency, and potency of topical products used during the study were recorded at home by subjects in a medication diary. Subjects returned TCS tubes at each clinic visit up until week 16, and these tubes were weighed by the site staff to determine the actual amount of TCS used. During the 16-week placebo-controlled study treatment period, medium-potency TCS dosing frequency was symptom-based (IGA score) adjusted every 4 weeks per the protocol-specified tapering algorithm. The analysis population for efficacy analyses is the FAS. Efficacy analyses were based on the treatment allocated (as randomized). Here "Number of Subjects analyzed" = Subjects who were evaluable for this endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of informed consent form up to end of study (EOS), Week 28, regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Pre-treatment AEs were AEs that developed/worsened in severity during pre-treatment period (from informed consent to first dose of study drug); All AEs collected during treatment and follow-up period were considered TEAEs. TEAEs were AEs that developed or worsened in severity compared to baseline during treatment and follow-up period.

Assessment type	Systematic

### Reporting groups

Reporting group title	Placebo QW + TCS
-----------------------	------------------

Reporting group description:

Subjects received one subcutaneous (SC) injection of matching placebo once per week (QW) (following two SC injections on day 1) from Week 1 to Week 15. All subjects were required to undergo treatment with topical corticosteroids (TCS) using a standardized regimen that continued through the end of the treatment period (Week 16). Starting at week 16, subjects could roll over into an open-label extension (OLE) study (R668-AD-1225), if they were considered eligible. Subjects who did not enter the OLE study were followed for up to an additional 12 weeks for safety ([Week 28, end of study (EOS) period]).

Reporting group title	Dupilumab 300 mg QW + TCS
-----------------------	---------------------------

Reporting group description:

Subjects received one subcutaneous (SC) injection of dupilumab 300 mg once per week (QW) (following an SC loading dose of 600 mg on day 1) from Week 1 to Week 15. All subjects were required to undergo treatment with topical corticosteroids (TCS) using a standardized regimen that continued through the end of the treatment period (Week 16). Starting at week 16, subjects could roll over into an open-label extension (OLE) study (R668-AD-1225), if they were considered eligible. Subjects who did not enter the OLE study were followed for up to an additional 12 weeks for safety ([Week 28, end of study (EOS) period]).

Reporting group title	Dupilumab 300 mg Q2W + TCS
-----------------------	----------------------------

Reporting group description:

Subjects received one subcutaneous (SC) injection of dupilumab 300 mg every 2 weeks (Q2W) from Week 1 to Week 15 (following a SC loading dose of 600 mg on day 1). During weeks in which dupilumab was not administered, subjects received matching placebo. All subjects were required to undergo treatment with topical corticosteroids (TCS) using a standardized regimen that continued through the end of the treatment period (Week 16). Starting at week 16, subjects could roll over into an open-label extension (OLE) study (R668-AD-1225), if they were considered eligible. Subjects who did not enter the OLE study were followed for up to an additional 12 weeks for safety ([Week 28, end of study (EOS) period]).

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 May 2016	1. Extended the treatment period from 16 weeks to 24 weeks and add week 24 endpoints to meet the criteria for dupilumab to be considered for chronic use in the treatment of AD. 2. The introduction was modified to provide support for the safety of a 24-week treatment period. 3. As a result, endpoints for week 24 corresponding to those for week 16 have been added and the hierarchy modified accordingly. 4. As the treatment period is extended from 16 weeks to 24 weeks and there is a 1-step analysis after the last patient completes 16 weeks of treatment, planned interim analysis section has been modified to state that the results of the 1-step analysis will not be used to change the conduct and integrity of the study. 1-step analysis has also been modified to accommodate the extension of the treatment period and the addition of week 24 endpoints. 5. Removed the endpoint "Percent change from baseline to week 16 in the GISS". 6. Exclusion criterion #4 was changed from "within 8 weeks prior to the screening visit" to "within 4 weeks of the baseline visit". The original wording would have resulted in automatic exclusion of all patients on systemic treatments (which is common in a population with severe AD) who present for screening. The revised criterion is now also consistent with all other AD protocols. 7. The secondary endpoint "Topical treatment for AD – medication-free days" was added

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
