Clinical trial results:
A Phase 2, Open-Label, Multiple Ascending Dose Study to Evaluate the Efficacy, Safety, Tolerability, Immunogenicity, Pharmacokinetics, and Pharmacodynamics of ALXN1210 Administered Intravenously to Patients with Paroxysmal Nocturnal Hemoglobinuria

Summary

EudraCT number	2015-002674-20
Trial protocol	DE GB SE ES
Global end of trial date	12 January 2022

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 January 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 January 2022
Global end of trial reached?	Yes
Global end of trial date	12 January 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary purpose of this study was to evaluate the safety, tolerability, and efficacy of multiple intravenous (IV) doses of ravulizumab administered to complement inhibitor treatment-naïve participants with paroxysmal nocturnal hemoglobinuria (PNH).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 January 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	Taiwan: 1
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 6
Worldwide total number of subjects	26
EEA total number of subjects	13

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study consisted of a screening period of up to 30 days and a Treatment Period of up to 253 days for Cohorts 1-3 and 281 days for Cohort 4. After completion of the Treatment Period, all participants had the opportunity to enter the Extension Period, wherein participants continue to receive ravulizumab for up to 5 years.

Period 1

Period 1 title	Treatment Period
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: Treatment Period

Arm description:

During the Treatment Period, participants were administered ravulizumab 1400 milligram (mg) on Day 1, ravulizumab 1000 mg on Day 15 and Day 29, and then ravulizumab 1000 mg every 4 weeks for 7 doses.

Arm type	Experimental
Investigational medicinal product name	Ravulizumab
Investigational medicinal product code	
Other name	Ultomiris, ALXN1210
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

During the Treatment Period, participants were administered ravulizumab 1400 mg on Day 1, ravulizumab 1000 mg on Day 15 and Day 29, and then ravulizumab 1000 mg every 4 weeks for 7 doses. Ravulizumab was formulated at pH 7.0 and was to be supplied as a sterile, preservative-free, 10 mg/milliliter (mL) solution for IV administration in 20-mL single-use vials.

Arm title	Cohort 2: Treatment Period

Arm description:

During the Treatment Period, participants were administered ravulizumab 2000 mg on Day 1, ravulizumab 1600 mg on Day 22 and Day 43, and then ravulizumab 1600 mg every 6 weeks for 4 doses.

Arm type	Experimental
Investigational medicinal product name	Ravulizumab
Investigational medicinal product code	
Other name	Ultomiris, ALXN1210
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

During the Treatment Period, participants were administered ravulizumab 2000 mg on Day 1, ravulizumab 1600 mg on Day 22 and Day 43, and then ravulizumab 1600 mg every 6 weeks for 4 doses. Ravulizumab was formulated at pH 7.0 and was to be supplied as a sterile, preservative-free, 10 mg/mL solution for IV administration in 20-mL single-use vials.

Arm title	Cohort 3: Treatment Period

Arm description:

During the Treatment Period, participants were administered ravulizumab 1600 mg on Day 1 and Day

15, ravulizumab 2400 mg on Day 29, and then ravulizumab 2400 mg every 8 weeks for 3 doses.

Arm type	Experimental
Investigational medicinal product name	Ravulizumab
Investigational medicinal product code	
Other name	Ultomiris, ALXN1210
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

During the Treatment Period, participants were administered ravulizumab 1600 mg on Day 1 and Day 15, ravulizumab 2400 mg on Day 29, and then ravulizumab 2400 mg every 8 weeks for 3 doses. Ravulizumab was formulated at pH 7.0 and was to be supplied as a sterile, preservative-free, 10 mg/mL solution for IV administration in 20-mL single-use vials.

Arm title	Cohort 4: Treatment Period

Arm description:

During the Treatment Period, participants were administered ravulizumab 3000 mg on Day 1, ravulizumab 5400 mg on Day 29, and then ravulizumab 5400 mg every 12 weeks for 2 doses.

Arm type	Experimental
Investigational medicinal product name	Ravulizumab
Investigational medicinal product code	
Other name	Ultomiris, ALXN1210
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

During the Treatment Period, participants were administered ravulizumab 3000 mg on Day 1, ravulizumab 5400 mg on Day 29, and then ravulizumab 5400 mg every 12 weeks for 2 doses. Ravulizumab was formulated at pH 7.0 and was to be supplied as a sterile, preservative-free, 10 mg/mL solution for IV administration in 20-mL single-use vials.

Period 2

Period 2 title	Extension Period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: Extension Period

Arm description:

In the Extension Period, participants initially continued to receive their dose. During the second year of the study, participants were administered weight-based doses of ravulizumab every 8 weeks for up to 5 years: 3000 mg for participants weighing 40 to less than 60 kilograms (kg), 3300 mg for participants weighing 60 to less than 100 kg, and 3600 mg for participants weighing 100 kg or more.

Arm type	Experimental
Investigational medicinal product name	Ravulizumab
Investigational medicinal product code	
Other name	Ultomiris, ALXN1210
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

In the Extension Period, participants initially continued to receive their dose. During the second year of the study, participants were administered weight-based doses of ravulizumab every 8 weeks for up to 5 years: 3000 mg for participants weighing 40 to less than 60 kg, 3300 mg for participants weighing 60 to less than 100 kg, and 3600 mg for participants weighing 100 kg or more. Ravulizumab was formulated at pH 7.0 and was to be supplied as a sterile, preservative-free, 10 mg/mL solution for IV administration in 20-mL single-use vials.

Arm title	Cohort 2: Extension Period

Arm description:

In the Extension Period, participants initially continued to receive their dose. During the second year of the study, participants were administered weight-based doses of ravulizumab every 8 weeks for up to 5 years: 3000 mg for participants weighing 40 to less than 60 kg, 3300 mg for participants weighing 60 to less than 100 kg, and 3600 mg for participants weighing 100 kg or more.

Arm type	Experimental

Statistical analyses

Statistical analysis title	Percent Change In LDH Levels

Statistical analysis description:

Data from Cohorts 1 to 4 combined at Day 253 was used. A sample size of 20 participants from the combined cohorts was required to provide approximately 95% power to detect a mean paired difference in LDH from baseline of –40% at Day 253 for Cohorts 1 to 4, and at Day 281 for Cohort 4 only, with an estimated standard deviation of 45%. This was based on a 2-sided paired t-test, with 5% type I error rate. To account for a possible 15% dropout rate, up to 26 participants were enrolled.

Comparison groups	Cohort 1: Treatment Period v Cohort 2: Treatment Period v Cohort 3: Treatment Period v Cohort 4: Treatment Period
Number of subjects included in analysis	26
Analysis specification	Pre-specified
Analysis type	other
P-value	< 0.0001 [1]
Method	Mixed Model for Repeated Measures (MMRM)

Notes:

[1] - Hypothesis testing was performed at the 0.05 level of significance. P-value tested whether the percent changes differed from zero at each time point for the combined cohorts. Cohort 4 (n=7) only at Day 281: P-value < 0.0001.

Secondary: Percent Change In Free Hemoglobin Levels From Baseline To Day 253 And Day 281

End point title	Percent Change In Free Hemoglobin Levels From Baseline To Day 253 And Day 281

End point description:

The percent change in free hemoglobin levels was assessed from Baseline to Day 253 for Cohorts 1 to 4 and from Baseline to Day 281 for Cohort 4 only.

End point type	Secondary

Method	MMRM

Notes:

[4] - Hypothesis testing was performed at the 0.05 level of significance. P-value tested whether the percent changes differed from zero at each time point for the combined cohorts. Cohort 4 (n=7) only at Day 281: P-value = 0.4688.

Secondary: Percent Change In PNH Red Blood Cell Types II And III Clone Size From Baseline To Day 253

End point title	Percent Change In PNH Red Blood Cell Types II And III Clone Size From Baseline To Day 253

End point description:

The percent change in PNH red blood cell (RBC), summed types II and III, clone size levels were assessed from Baseline to Day 253 for Cohorts 1 to 4.

End point type	Secondary

End point timeframe:

Baseline, Day 253 (Cohorts 1 to 4)

End point values	Cohort 1: Treatment Period	Cohort 2: Treatment Period	Cohort 3: Treatment Period	Cohort 4: Treatment Period

Number of subjects analysed	6	6	7	7
Units: percent change				
arithmetic mean (standard deviation)	6.65 (± 24.101)	5.47 (± 21.940)	54.14 (± 98.713)	88.21 (± 138.290)

Statistical analyses

Statistical analysis title	Change in PNH RBC Size

Statistical analysis description:

Statistical analysis presented is of Cohorts 1 to 4 combined at Day 253.

Comparison groups	Cohort 1: Treatment Period v Cohort 2: Treatment Period v Cohort 3: Treatment Period v Cohort 4: Treatment Period
Number of subjects included in analysis	26
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.0023 [5]
Method	MMRM

Notes:

[5] - Hypothesis testing was performed at the 0.05 level of significance. P-value tested whether the percent changes differed from zero at each time point for the combined cohorts.

Secondary: Percent Change In D-dimer From Baseline To Day 253 And Day 281

End point title	Percent Change In D-dimer From Baseline To Day 253 And Day 281

End point description:

The percent change in D-dimer levels were assessed from Baseline to Day 253 for Cohorts 1 to 4 and from Baseline to Day 281 for Cohort 4 only.

End point type	Secondary

End point timeframe:

Baseline to Day 253 (Cohorts 1 to 4) and Day 281 (Cohort 4)

End point values	Cohort 1: Treatment Period	Cohort 2: Treatment Period	Cohort 3: Treatment Period	Cohort 4: Treatment Period
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	6	6	7	7
Units: percent change				
arithmetic mean (standard deviation)				
Day 253 (n=6, n=6, n=7, n=6)	-24.80 (± 32.436)	-29.47 (± 26.547)	-10.90 (± 41.032)	-16.08 (± 34.783)
Day 281 (n=0, n=0, n=0, n=6)	0 (± 0)	0 (± 0)	0 (± 0)	-27.05 (± 27.663)

Statistical analyses

Statistical analysis title	%Change: D-dimer From Baseline To Days 253 And 281

Statistical analysis description:

Statistical analysis presented is of Cohorts 1 to 4 combined at Day 253 and for Cohort 4 at Day 281 only.

Comparison groups	Cohort 1: Treatment Period v Cohort 2: Treatment Period v Cohort 3: Treatment Period v Cohort 4: Treatment Period
Number of subjects included in analysis	26
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.0029 [6]
Method	MMRM

Notes:

[6] - Hypothesis testing was performed at the 0.05 level of significance. P-value tested whether the percent changes differed from 0 for the combined cohorts. Cohort 4 (n=6) only at Day 281: P-value = 0.1250.

Secondary: Change In Clinical Manifestations Of PNH From Baseline To Day 253 And Day 281

End point title	Change In Clinical Manifestations Of PNH From Baseline To Day 253 And Day 281

End point description:

Clinical manifestations were assessed from Baseline to Day 253 for Cohorts 1 to 4 and from Baseline to Day 281 for Cohort 4 only. Clinical manifestations were defined as fatigue, abdominal pain, dyspnea,

dysphagia, chest pain, and erectile dysfunction (ED) (male participants only). Improvement was defined as present at Baseline and absent at Day end point. Worsening was defined as absent at Baseline and present at Day end point. No Change was defined as no change from Baseline and time point of end point.

End point type	Secondary

End point timeframe:

Baseline, Day 253 (Cohorts 1 to 4) and Day 281 (Cohort 4)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were monitored continuously from Screening to Day 253 (for Cohorts 1, 2, and 3) and Day 281 (for Cohort 4) (Treatment Period).

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	20.0

Reporting groups

Reporting group title	Cohort 1: Treatment Period

Reporting group description:

During the Treatment Period, participants were administered ravulizumab 1400 mg on Day 1, ravulizumab 1000 mg on Day 15 and Day 29, and then ravulizumab 1000 mg every 4 weeks for 7 doses.

Reporting group title	Cohort 4: Treatment Period

Reporting group description:

During the Treatment Period, participants were administered ravulizumab 3000 mg on Day 1, ravulizumab 5400 mg on Day 29, and then ravulizumab 5400 mg every 12 weeks for 2 doses.

Reporting group title	Cohort 3: Treatment Period

Reporting group description:

During the Treatment Period, participants were administered ravulizumab 1600 mg on Day 1 and Day 15, ravulizumab 2400 mg on Day 29, and then ravulizumab 2400 mg every 8 weeks for 3 doses.

Reporting group title	Cohort 2: Treatment Period

Reporting group description:

During the Treatment Period, participants were administered ravulizumab 2000 mg on Day 1, ravulizumab 1600 mg on Day 22 and Day 43, and then ravulizumab 1600 mg every 6 weeks for 4 doses.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 March 2016	- Incorporated updated information from the ALXN1210-HV-101 study (single ascending dose study) and included overall conclusions of the study; additional information provided on administration of 400- and 800-mg doses (ongoing, multiple ascending dose study; ALXN1210-HV-102) and administration of ravulizumab in participants with PNH (ongoing, dose-escalation study; ALXN1210-PNH-103). - Updated study rationale with current Phase 1 status. - Added new treatment cohort (Cohort 4) to investigate longer dosing interval. - Clarified the scheduled time points at which the data monitoring committee will conduct a review of the safety data. - Described new pharmacokinetics/pharmacodynamics (PK/PD) information from Phase 1 healthy volunteer studies and explained rationale for adding new cohort with longer treatment interval. - Exclusion Criteria: #5, removed 90-day requirement to align with exclusion criterion #12, which specifies infections within 14 days prior to dosing; #8, revised for clarity and to specify that stable international normalized ratio was per investigator discretion; #14, to clarify that only interventional studies are exclusionary; #16, to ensure that low-grade fevers do not result in exclusion. - Revised infusion rates and approximate infusion duration; added new dosing information for Cohort 4. - Corrected inconsistencies between the Schedule of Assessments and the table of PK/PD assessments. - Added sentence stating that samples should not be drawn from the same arm where the infusion takes place on dosing days. - Added information regarding cancellation by central laboratory of hemolyzed samples and the potential need for local laboratory results. - Noted that the visual analog scale should be completed as soon as practical after completion of the infusion.
02 August 2016	- Change in duration of contraception required following last dose of study drug. - Reduction in frequency of abbreviated physical examinations during the Extension Period.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
