Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 August 2012
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 March 2012
Global end of trial reached?	Yes
Global end of trial date	20 March 2012
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate single dose pharmacokinetics (PK) data of intravenous (i.v.) daptomycin administered at 4 milligrams per kilogram (mg/kg) or 6 mg/kg as a 30 minute infusion in pediatric subjects aged 3 to 24 months, inclusive, with proven or suspected bacterial infection who were receiving standard antibiotic therapy, including subjects that were receiving prophylactic antibiotics peri-operatively.

Protection of trial subjects:

This open-label study did not employ any blinding methods. Screening assessments included medical and medication history, demographics, physical examination, vital signs, a brief neurology examination, electrocardiogram, clinical laboratory tests (hematology, chemistry, urinalysis, serum creatine kinase, and serum creatinine). Study subjects were monitored for adverse events. The study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practices (GCP), Food and Drug Administration (FDA) Code of Federal Regulations (CFR) 312.120, and applicable local regulatory requirements. The protocol, informed consent form (ICF), and all other written documents provided to the parent (or appropriate legal representative) were reviewed and approved by an independent Institutional Review Board (IRB) at each site before the study began. In addition, this study enrolled in a stepwise fashion. It began with age group 1 and after review of PK and safety data, age group 2 was enrolled, and continued in this manner.

Background therapy: -

Evidence for comparator:

This was a non-comparative study.

Actual start date of recruitment	13 January 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 32
Worldwide total number of subjects	32
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	32
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Written parental (or appropriate legal representative) informed consent was obtained prior to the initiation of any of the assessments/procedures required by the protocol, and subjects met all of the inclusion and none of the exclusion criteria prior to enrollment in this study. Eligible subjects received open-label study drug treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Daptomycin 6 mg/kg: Ages 13 months to 24 months

Arm description:

Subjects aged 13 months to 24 months inclusive received a single dose of i.v. daptomycin 6 mg/kg over a duration of 30 minutes.

Arm type	Experimental
Investigational medicinal product name	Daptomycin
Investigational medicinal product code	
Other name	Cubicin®
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

All subjects received a single-dose of daptomycin 6 mg/kg dissolved in 0.9% sodium chloride for injection. Daptomycin was administered i.v. over 30 minutes. The dosing volume was 25 millilitres (mL) and the infusion rate was 0.83 mL per minute for the 30 minute infusion.

Arm title	Daptomycin 4 mg/kg: Ages 7 months to 12 months
------------------	--

Arm description:

Subjects aged 7 months to 12 months inclusive received a single dose of i.v. daptomycin 4 mg/kg over a duration of 30 minutes.

Arm type	Experimental
Investigational medicinal product name	Daptomycin
Investigational medicinal product code	
Other name	Cubicin®
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

All subjects received a single-dose of daptomycin 4 mg/kg dissolved in 0.9% sodium chloride for injection. Daptomycin was administered i.v. over 30 minutes. The dosing volume was 25 mL and the infusion rate was 0.83 mL per minute for the 30 minute infusion.

Arm title	Daptomycin 4 mg/kg: Ages 3 months to 6 months
------------------	---

Arm description:

Subjects aged 3 months to 6 months inclusive received a single dose of i.v. daptomycin 4 mg/kg over a duration of 30 minutes.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 November 2009	<ul style="list-style-type: none">• Dosing for Group 1 (ages 13 months to 24 months) was changed from 9 mg/kg over a 1 hour infusion to 6 mg/kg over a 30 minute infusion. In addition, infusion times were updated for Group 2 (ages 7 months to 12 months) and Group 3 (ages 3 months to 6 months) to include the possibility of a 30 minute infusion.• Enrollment was to begin with Group 1.• Pharmacokinetic sampling time points were adjusted accordingly to account for the revised dosing.
02 September 2010	<ul style="list-style-type: none">• Based on the review of clinical data from 4 infants in Age Group 1, the dose of study medication was reduced to 4 mg/kg administered over 30 minutes for children younger than 13 months of age (Age Groups 2 and 3). The 6 mg/kg dose, administered over 30 minutes, was continued for Age Group 1. Age Groups 2 and 3 were to be enrolled simultaneously.• An inclusion criterion was added that requires the presence of two patent i.v. lines (or comparable means of venous access) prior to dosing on Study Day 1.• The timing of PK plasma sample collection was revised to reflect the revised infusion schedule.
20 July 2011	<ul style="list-style-type: none">• The option for a 1 hour or 2 hour infusion was removed since both dose groups received 4 mg/kg which was infused over 30 minutes.• The Baseline evaluation screening window was changed from 48 hour prior to dosing to 2 weeks prior to dosing to allow a larger window for screening.• To account for the difficulty placing 12 leads on the subjects in the youngest age group, the requirement for a 12-lead ECG was changed to an ECG.• Revision of inclusion criterion 5 to state that subjects had to have suspected or diagnosed bacterial infection instead of a gram positive infection. The subject was also to have received standard antibiotic therapy, including prophylactic use of antibiotics peri-operatively.• Revisions of various other inclusion and exclusion criteria.• Concomitant antibiotics and medications and concurrent procedures was revised to account for the inclusion of surgical subjects. The following changes were made: the requirements that surgical procedures could not be performed within 24 hours prior to dosing and that subjects were not to plan procedures in the 24 hours following dosing were deleted.• The number of samples required for PK collection was reduced from 6 to 5, thus eliminating the pre-dose draw.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
